MANUFACTURING INDUSTRY

All indicators show a consistent growth trend in industrial production, present since October 1995. Total industrial production in April 1996 was 2.3% higher than in the same month last year. Cumulatively, for the first four months of 1996 compared to the first four months of 1995, production is 0.6% higher. Growth is strongest in the investment goods industry, with production 11.1% higher than in the first four months of 1995. Production of intermediate goods is 0.3% higher, while consumer goods production fell by 1.9% on the cumulative year-on-year level.

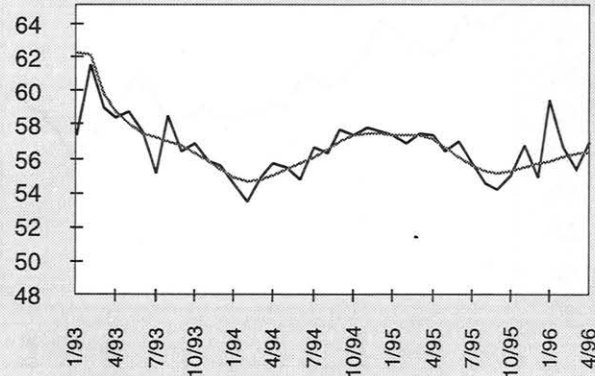

The good news is that industrial production managed to make up for the backlog accumulated in mid-1995, surpassing the level attained during the first four months of 1995, before the negative aggregate shock due to the liberating military actions was felt. We are facing a period of rapid growth of aggregate demand (already visible in the developments of monetary aggregates) in which production will continue to grow. Consequently, we can predict that the growth rate of industrial production in 1996 will be significant, with obvious differences in the structure of its development. Even in the consumer goods industry, we can expect slight recovery thanks to a predicted increase in tourist demand, particularly in the foodstuffs industry.

At this moment, it is very difficult to estimate the extent to which the total growth in demand will cause an increase in domestic industrial production. In great part, this depends on inventories of finished products, imports and the statistical sample.

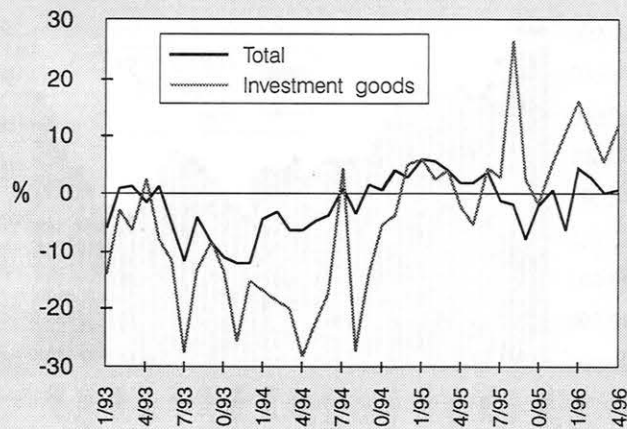

However, the predicted year-on-year growth of the physical volume of production of 3% to 4% is now a real possibility. It should be noted that the

SECTOR - Constant prices, January 1992

deep structural trends and changes at hand here do not depend on the prevailing exchange rate and the monetary policy. The growth of productivity in industrial production has good chances of continuing at an even more accelerated pace (last year it amounted to 6.6%), which means that this past-burdened sector will have to continue to adjust to the productivity criteria imposed by the world market in order to increase its export potential.

The number of registered unemployed is still growing, fuelled by structural and seasonal factors. However, due to the summer turn-around in the influence of seasonal factors, we can soon expect a turn-around in the developments in this entire category. It is important to note that in March 1996 (for the first time since Croatia gained independence) the data on employment in the former public sector show a significant increase of 5,000 new jobs compared to February 1996.

This favourable picture of developments in the real sector of the economy is confirmed by the data on the real cash flow of value added, based on giro-account transactions. In March 1996, this indicator recorded an 8.2% higher value than in March 1995. Cumulatively, for the first three months of 1996, it is 4.2% higher than in the same period last year.

TRADE

The beginning of a significant economic boom is confirmed by the data on trade activities. In April 1996, real volume of turnover in retail trade was 21.2% higher than in April 1995, while the cumulative rate of growth for the first four months of 1996 amounts to 12.4% compared to the same period in 1995. And while the real volume is growing, the cash flow of real value added is stagnating, with slight indica-

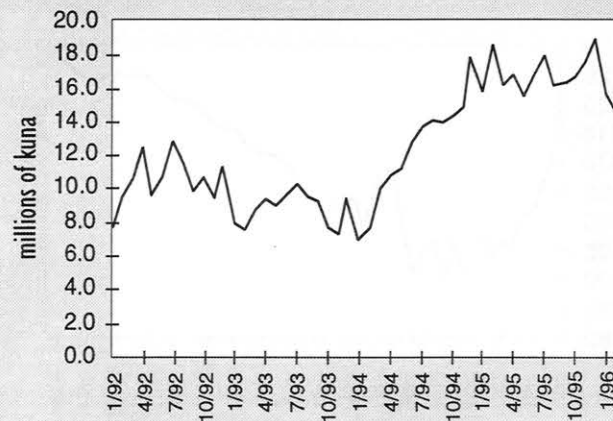

tions of an upward change in trend. Cumulatively, for the first four months of 1996, this indicator shows a 6.5% decrease. However, in April it recorded a 4.5% growth compared to April 1995, thus confirming the tight positive correlation between developments in real cash flow of value added and imports. Comparing tendencies in the two indicators of the volume of real activity in trade, we can conclude that a relatively greater portion of the growth of aggregate demand in early 1996 (commentary on page 13) was transformed into demand for domestic products. This conclusion is completely in tune with developments in other relevant indicators of real economic activity.

PRICES

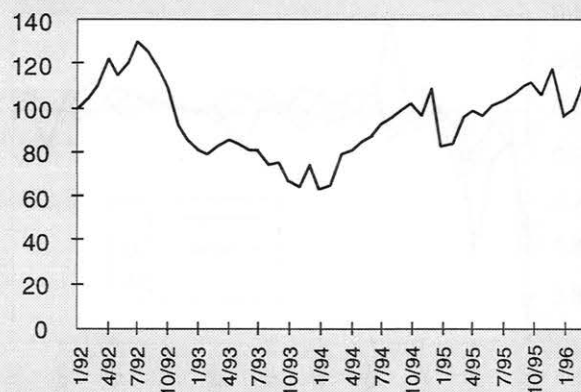

While in May, everyone feared the chain-effects of the increase in prices of energy products, the inflation shock appeared on the other side - in the prices of agricultural products and foodstuffs.

The 10.1% increase in the price of oil and natural gas turned out to be an isolated phenomenon. Other producers' prices continued to fall, so that the aggregate index recorded a 0.4% deflation. The 1.1% inflation in retail prices and 1.4% in the cost of living was mainly caused by the increase in the prices of foodstuffs (2%) and agricultural products (4.7%). These are the two factors that had the strongest influence on tendencies in prices in the previous month, but in the opposite direction (these oscillations are mainly of seasonal character). Therefore, we should bear in mind that the average monthly rate of inflation in the last two months amounted to 0.4% measured by retail prices, i.e. 0.3% measured by the cost of living. Considering that the prices of services did not deviate significantly from the above developments,

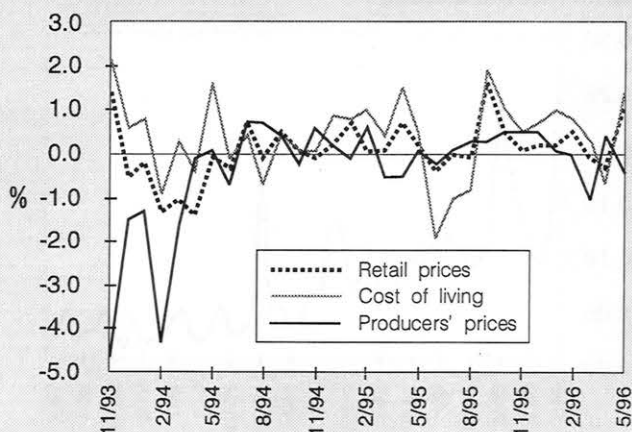

CASH FLOW OF VALUE-ADDED COMPONENTS IN TRADE SECTOR

MONTHLY RATES OF INFLATION OF CAPITAL GOODS' PRICES (CA), INTER-MEDIATE GOODS' PRICES (I) AND CONSUMER GOODS' PRICES (CO)

INTER-INDUSTRY RELATIVE PRICE VARIABILITY IN MANUFACTURING INDUSTRY (standard deviation)

and that retail prices in May were still only 1.4% higher and the cost of living 2.7% higher than the levels attained at the end of 1995, the relative significance of the May inflation shock is much smaller than its percentage might imply. Adding the balanced developments in the structure of producers' prices, we conclude that there is no cause for excitement.

On the other hand, caution is required, for the dynamic effect of the spread of the rise in prices of petroleum products is still not worn out. In light of the above, we applaud Prime Minister's announcement of the reevaluation of the government oil monopoly's pricing policy. Further on, a new model of protection policy is expected to be introduced. According to its proposed layout, such protection policy should give more protection to domestic consumer industries. This represents a second potential inflationary impulse. Third, we are facing a period of expansion of tourist demand, whose inflationary impulse could strongly reflect on prices of consumer goods and services. Thus we enter a period of sensitive inflationary expectations, additionally fueled by the media, pressuring for a "turn-around" in the overall economic, and especially in the monetary policy. However, such a "turn-around" is not likely to happen.

WAGES AND AGGREGATE DEMAND

The real wage indicator (the average nominal wage deflated by the cost of living) shows stable growth. In April, the real average net wage was 4.9% higher than in April 1995. Cumulatively, for the first four months of 1996, the real wage is 3.9% higher.

Since the beginning of 1995 (since when our data are methodologically comparable) developments in the

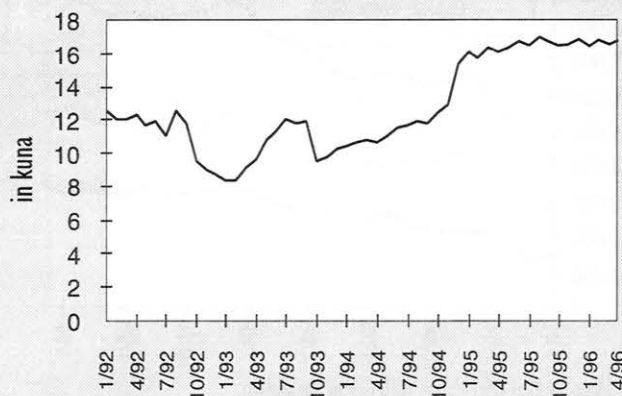

real wage indicator point to a very consistent income policy, which allows growth of real wages in accordance with the growth in productivity of labour. Naturally, a policy that would guarantee the equality between the two is quite impossible, but the ex post results confirm the correctness of its principles. Bearing other economic tendencies in mind, further growth of real wages can be expected.

The upward trend of the economy is also confirmed by developments in real aggregate demand. In the first quarter of 1996, total real money demand was 4% higher than in the same period last year (with real expenditures of the household sector 5.6% higher and real government expenditures 6.7% higher than last year). As changes in the structure of real expenditures clearly indicate, investment expenditures recorded, at the same time, a significant decrease. It is known that registered investment payouts are under the predominant influence of capital expenditures of the government, and that this statistics insufficiently covers investment in the private sector. Consequently, the government should be warned once again about the possible disappearance of investment due to huge current government expenditures, even though the actual data on investment activity is not known.

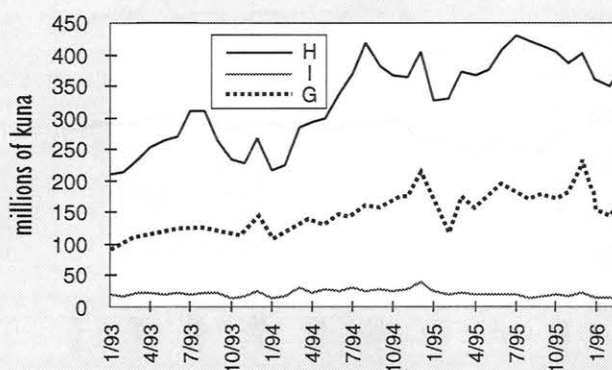

MONETARY DEVELOPMENTS

The main characteristic of the first 20 days of May is a significant slow-down of the growth of all aggregates, following a period of intense growth (March and April). Total liquid assets (M4) grew by 1.5% during the first 20 days of May, compared to the April growth of 2.6%. Money supply (M1) grew by 1.8% in April due to a 3.6% increase in deposit money, while

Note: definitions H, I and G do not correspond to SNA definitions.

STRUCTURE OF REAL EXPENDITURES

in the first 20 days of May (with a high cash level) it grew by 1%.

Tendencies in cash since the beginning of 1996 are especially interesting. The level of cash is lower at the end of May 1996 than in May 1995. There was hardly any increase in cash during the first five months of 1996 (according to end-of-the-month balances). With cash held by households, we conclude that the transaction money demand is satisfied. Furthermore, deposit money of the household sector grew in April by a mild 1.9%.

For the sake of comparison, in April 1995 deposit money of the household sector recorded a 14.04% growth, while cash grew by 6.7%. Thus 1995 was rather specific, with growth rates of deposit money by the household sector higher than the growth rate of the total deposit money, i.e. the structure of deposit money was redistributed in favour of the household sector.

Foreign currency deposits increased in April by the usual 500 mil kuna, then slowed down in May. In the first twenty days of May, foreign currency deposits grew by 253 mil kuna. For the first time in the last six months, the growth in the first 20 days of the month was less than 300 mil kuna. This indicates a slow-down of growth of M4. The structure of total liquid assets still shows kuna deposits stagnating compared to foreign currency deposits. Kuna savings deposits of the household sector increased in April by a mere 0.01%. This means that 3 years of stable currency and credible policy have not sufficed to restore trust in the domestic currency. Despite the stimulative interest rates on kuna deposits, the ghost of insecurity still forces households to shelter their financial property in the German mark.

On the assets side, the NBC was slightly more active on the foreign exchange market in May than in April. In

May, foreign exchange reserves of the NBC grew above USD 1.9 bil, creating 336.5 mil kuna. For the sake of comparison, the net monetary effect of foreign exchange interventions on foreign exchange markets in April was 95.5 mil kuna.

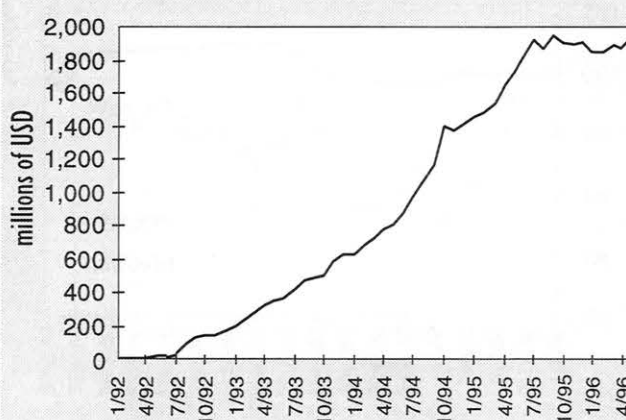

The NBC could not stay indifferent to the appreciation of kuna, although the volume of foreign exchange interventions remains relatively small compared to the total of inter-bank transactions.

Finally, the liquidity of the banking system was at a satisfactory high level in May. DMBs' giro accounts were at the level of 230 mil kuna at the end of May. By May 25, no interventive credit was used. The recording of voluntary treasury bills reached 470 mil kuna, which is a significant increase compared to the previous months. It all resulted in the growth of credit of 204.6 mil kuna in the first 20 days of May (a moderate 0.6%)

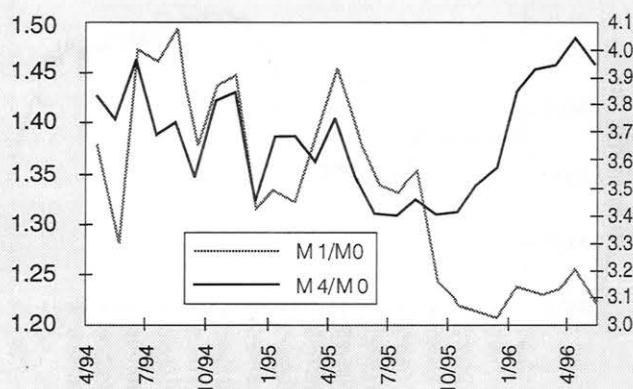

EXCHANGE RATE

In May, the appreciation of the kuna to the German mark continued. In the last days of May, the rate of exchange stopped at levels slightly over 361 kuna per 100 DEM, indicating a 2% nominal appreciation compared to the end of April. We can say that the appreciation of the German mark is caused by internal and external factors. The fact is, there has been a seasonally common increase in foreign exchange supply on the Croatian foreign exchange market, accompanied by the weakening of the German mark towards other major currencies. As a consequence, the kuna kept weakening in relation to the US dollar, while keeping relatively stable against the Italian lira. The Slovenian tolar kept weakening, raising the nominal kuna exchange rate by 0.7%. This is reflected

on the appreciation of the real exchange rate measured by producers' prices (0.1%) and by retail prices (1.4%), caused in major part by high inflation of retail prices in May. Consequently, after the depreciation in April, the real exchange rate grew naturally stronger in May.

In the longer run, the real exchange rate seems a very stable category. The change of the real exchange rate for the first 5 months of 1996 compared to the same period last year amounts to 1.5% (real depreciation!) measured by retail prices and to 2.1% measured by producers' prices. In comparison with December 1995, the real exchange rate measured by retail prices appreciated by 0.5% and measured by producers' prices it depreciated by 1.8%. On the whole, this category has been extremely stable since fall 1993.

BALANCE OF PAYMENTS

Data on merchandise trade in April confirm the positive tendencies present in the real sector. In April 1996, exports were 21.7%, while imports were 7.9% greater (in current dollars) than in April 1995. Since the data for the first quarter reported either stagnation or decrease, cumulative data for the first 4 months of 1996, report a decrease in both exports (1.4%) and imports (1%), in comparison with the same period last year. The merchandise trade deficit (reported in current dollars) dropped by 0.5% compared to the same period last year, confirming our expectations. However, since the dollar was much weaker in 1995 than in 1996, dollar amounts underestimate the real tendencies. Calculating the monthly amounts of imports and exports at the average mean NBC rate for each month, gives us a different picture of developments

in exports and imports for the first four months of 1996 compared to the first 4 months of 1995 - namely, growth of both imports and exports (2.7% and 1.7%, respectively).

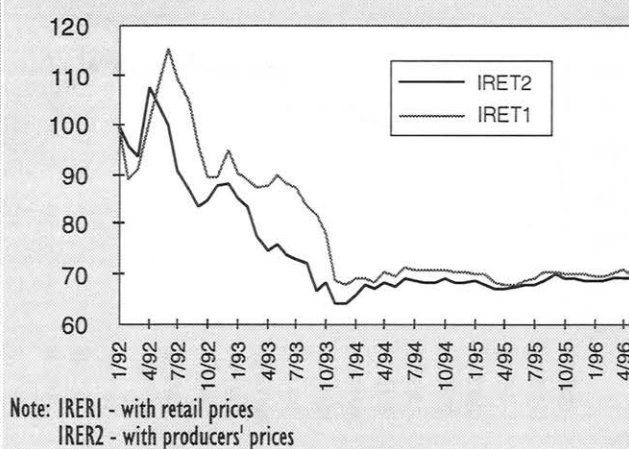

The current account deficit in the balance of payments for the first two months amounted to USD 116.3 mil (47% lower than in the same period last year). This is due to the increase in the surplus in the sub-balance of services (200% increase) and current transfers (111% increase). The inflow of capital was at the same time 18% greater.

These developments indicate that the predicted decrease of the share of deficit in the GDP was justified, based mainly on the growth of the surplus in service trade and in transfers. At this time, it seems realistic to expect a deficit of 5.5% of GDP on a yearly level. Finally, it should be noted that "net errors and omissions" are becoming a less and less relevant "explanation" for developments in the balance of payments of the Republic of Croatia, due to the stabilization of modes of deficit financing.

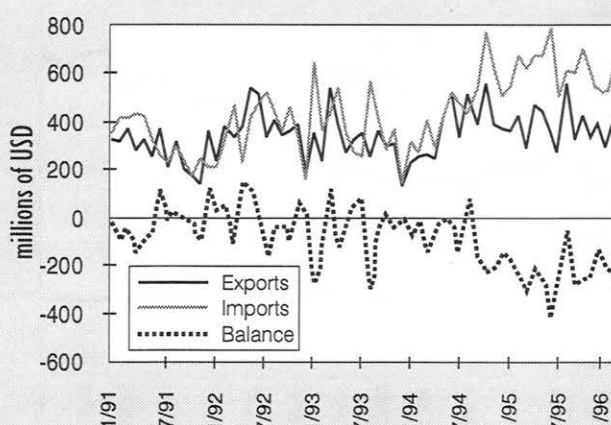

MONEY MARKETS AND INTEREST RATES

Last month, we mentioned the oscillations of interest rates on the Zagreb money market - from (optimistic) 28% to 31% on a yearly level. The end of April brought no hope of decrease; in addition to liquidity problems experienced by major banks at the end of the month, an additional liquidity crisis was expected as enterprises started pulling money out of the banking system to meet the deadline on profit tax payment. Tendencies of the average daily interest rate on the money market at the beginning of May clearly showed the increase of the demand for kuna and brought the

DEPOSIT MONEY BANKS' ANNUAL INTEREST RATES

INTERENTERPRISE ARREARS REPORTED TO PAYMENTS INSTITUTE

highest average daily interest rate ever - 32%. After that, everything went to shambles. Restructuring and financial rehabilitation of banks began.

Interest rates started falling to the levels prevailing before the December shock (25% - 26%). In the last week of May, they surged all the way down to 21%. The hope of flexibility of interest rates downwards finally became true following the beginning of bank restructuring.

What happened is exactly what economic theory predicts, as pointed out numerous times by the NBC. With banks with price-inelastic money demand removed from the money market, the interest rate could start reacting to relations between money supply and demand with much more precision, enabling the NBC to apply different policies to affect the interest rate. Except for the first day of May, demand on the money market has been satisfied with a high coefficient (over 90%), with supply constantly surpassing demand. It is not difficult to imagine what would have happened with the interest rate, had our government had the strength to include the major money-devourer, Privredna banka, in the first round of bank restructuring.

The May developments encourage us, for, on the one hand they confirm that interest rates have not been a strictly monetary problem, but to a much greater degree a structural problem, and on the other hand they stimulate the government to continue with the process of restructuring and of consolidation of initial results. Since we are one month behind with processing data on DMBs' interest rates, we are still unable to foresee the effects of restructuring in that particular segment of financial markets.

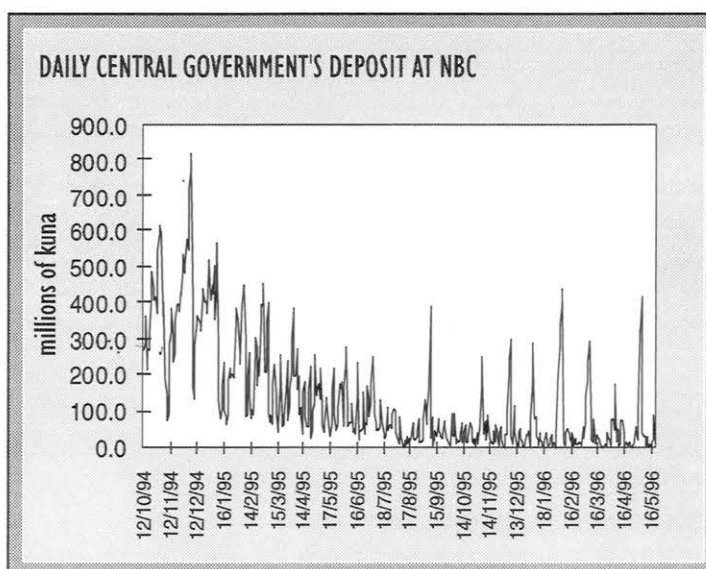

However, we should be aware that, in the short term, the decrease in interest rates bears huge restrictions.

Miracles do not happen in the economy. Even the relatively sound segment of the banking system is burdened with high administrative expenses and financial risks. The continuously present high risk of uncollectible payment orders, presents an enormous threat to the prospect of lower interest rates.

Unsettled payment orders to enterprises reached (as expected) 7 bil kuna at the end of March.

STATE BUDGET

Judging from the daily balances on the central government's giro account, the central government's treasury is currently in the position defined after August 1995. However, it should be noted that the within-monthly peaks, attained in the first week of each month, were much more distinct in the first quarter of 1996 than in the last quarter of 1995. Since there have been no significant changes in the short-term financing of periodic surplus of expenditures over revenues in the last 6 months, these peaks should be interpreted as a continuously present sign of well-filled treasury vaults. Indirectly, that also indicate a slightly higher level of real activity in the first quarter than estimated.

Classification and Presentation of Data on Claims and Liabilities

Data on financial institutions' claims and liabilities are classified according to institutional sectors and financial instruments. Institutional sectors are: financial institutions, central government and funds, other domestic sectors and foreign sector.

The financial institutions sector includes following sub-sectors: monetary authorities (the central bank), deposit money banks (DMBs), other banking institutions and nonbank financial institutions. The central bank is the National Bank of Croatia (NBC). Deposit money banks are institutions granted, by the National Bank of Croatia, the permission to perform banking business services in accordance with the Law on Banks and Savings Banks. Other banking institutions comprise savings banks. Since July 1995 savings banks have been under auspices, and have operated with the permission of the NBC. Nonbank financial institutions are financial institutions not classified as banks or other banking institutions (insurance companies, investment funds, savings cooperatives etc.)

The central government and funds comprises government institutions including Croatian Roads Company, Bank Rehabilitation Agency and Croatian Guarantee Agency, and following central government funds: Croatian health insurance fund, state retirement funds, employment agency, Croatian Privatization Fund, Croatian water company and Croatian Bank for Reconstruction and Development. Other domestic sectors are other central government funds (those not classified under the central government and funds sector), local government authorities and local funds, public and private companies and households, including craftsmen and non-profit institutions. In some tables other domestic sectors are divided into following sub-sectors: local governments and funds (including other republic funds, local government authorities and local funds), public and private enterprises, and households (including craftsmen and non-profit institutions).

Foreign sector includes foreign legal entities and individuals.

All data on claims and liabilities refer to balances at the end of the reporting period. Foreign exchange items are reported in their kuna equivalent at the midpoint NBC exchange rate at the end of the reporting period.

Table A1: Monetary and Credit Aggregates

The table shows data on some basic monetary and credit aggregates, including their monthly growth rates.

Reserve money has been taken over in its entirety from the Monetary Authorities Accounts (Table C1).

Money (M1) is defined in the same way as the corresponding item in the Monetary Survey (Table B1). It comprises cash outside banks, deposits with NBC by other banking institutions and other domestic sectors as well as DMBs' demand deposits. *Money (M1a)* comprises currency outside banks and DMBs' demand deposits, increased by the demand deposits of the central government and funds with DMBs.

Broadest money (M4) comprises *Money (M1)*, savings and time deposits, foreign currency deposits as well as bonds and money market instruments (all above components taken over from the Monetary Survey (Table B1)).

Net domestic assets are defined as a difference between total liquid assets and foreign assets (net).

Domestic credit comprises DMBs' claims on other domestic sectors, other banking institutions and nonbank financial institutions.

Table B1: Monetary Survey

The monetary survey shows consolidated data from the Monetary Authorities Accounts (Table C1) and DMB's Accounts (Table D1).

Foreign assets (net) are the difference between total foreign assets and total foreign liabilities of the NBC and DMBs.

Domestic credit is the sum of corresponding items from Monetary Authorities Accounts and DMB's accounts. Claims on central government and funds are reported on the net basis, i.e. decreased by central government and funds' deposits with the NBC and DMBs.

The money is the sum of currency outside banks, deposits by other banking institutions with the NBC, deposits by other domestic sectors with the NBC and DMB's demand deposits (item *Demand deposits* in DMB's Accounts, Table D1).

Items *Savings and time deposits*, *Foreign currency deposits* as well as *Bonds and money market instruments* are entirely taken over from the DMB's Accounts, while item *Restricted and blocked deposits* represent the sum of correspondent items from Monetary Authorities Accounts (excluding DMBs blocked deposits with the NBC) and DMBs Accounts. *Other items (net)* are unclassified liabilities decreased by unclassified assets.

Table B2: Number of Reporting Deposit Money Banks and Savings Banks and Their Classification by Size

The table shows the total number of DMBs and savings banks which report monthly to the NBC. Their operation is shown in the DMB's/savings banks' accounts. *Total number of reporting DMBs* includes former branches of banks with their headquarters in the former Yugoslavia, which are currently under liquidation.

Due to the fact that savings banks were not legally obliged to report their operation to the NBC until July 1995, the total number of savings banks refers only to those savings banks which reported voluntarily to the NBC. In June 1995, coordination of the registration of savings banks with the Law on Banks and Savings Banks, and reporting to the NBC became compulsory. Since June 1995, total number of savings banks reporting to the NBC has corresponded with the total number of registered savings banks. The table also shows the classification of reporting DMBs and savings banks according to their total assets. Former branches of banks with their headquarters in the former Yugoslavia are classified in relation to the size of their total assets decreased by households' foreign currency deposits transferred to resident banks.

Table C1: Monetary Authorities Accounts

The table reports data on claims and liabilities by monetary authorities. *Foreign assets* include the following forms of foreign currency and kuna claims on foreign legal entities and individuals: monetary gold, holdings of special drawing rights, foreign cash in vaults, reserve position in the International Monetary Fund, current account balances with foreign banks, time deposits in foreign banks, foreign currency security investments and other claims.

Claims on central government and funds are loans and overdue claims on the budget of the Republic of Croatia. *Claims in kuna* are short-term loans granted for the purpose of overcoming the incoordination between incoming revenues and execution of budgetary expenditures, long-term loans granted by special decrees by the government of the Republic of Croatia, and overdue claims on the State Budget for liabilities to the IMF and foreign banks. *Claims in foreign currency* is a counter-entry to the liability to the IMF based on the succession of membership in that institution.

Claims on other domestic sectors are loans and overdue claims on other domestic sectors.

Claims on DMBs are credit to DMBs, deposits by the NBC with DMBs and overdue claims on DMBs. *Credit to DMBs* is split according to the type of financial instruments. *Refinancing of DMBs* include loans granted within general and selective quotas up to the end of 1993, as well as advances to DMBs for performing currency exchanges. Refinancing loans granted within the general and selective quotas were paid back in their entirety by the end of April 1994. In July 1994, they were formally revoked. Item *Lombard credits* comprises credits to DMBs for regular maintaining of the day-to-day liquidity, which were replaced by lombard credits in December 1994. Overdue claims on DMBs comprise loans due, giro account overdrafts and banks' undiscipline in allocation and maintenance of statutory reserve requirements.

Reserve money consists of currency outside banks, cash in DMBs' vaults, DMBs' deposits with the NBC, other banking institutions' deposits and other domestic sectors' deposits with the NBC. *DMBs' deposits* are: giro account balances, statutory reserves deposited on a special account with the NBC as well as NBC bills on obligatory basis. *Deposits by other banking institutions* are: giro account balances of savings banks as well as statutory reserves of savings banks' deposited on a special account with the NBC. *Deposits by other domestic sectors* are: other domestic sectors' giro account balances (this refers to accounts opened with the NBC by October 1994, since when they have been in the process of transition into deposits with the DMBs).

Restricted and blocked deposits are mainly import deposits. Blocked foreign currency deposits are funds deposited on a special account with the NBC for the purpose of covering the unpaid liabilities due to foreign creditors.

Foreign liabilities include use of IMF credits and liabilities to international financial institutions.

Central government and funds deposits are demand deposits and foreign currency deposits of the central government and funds with the NBC.

NBC bills are NBC bills on voluntary basis.

Capital accounts include reserves, funds, undistributed profit and f/c revaluation adjustment (net).

Other items (net) are unclassified liabilities decreased by unclassified assets of the NBC's accounts.

Table D1: Deposit Money Banks' Accounts

DMBs accounts include data on Croatian DMBs' claims and liabilities and data on claims and liabilities of former branches of banks with their

headquarters in former Yugoslavia, which are now in the process of liquidation. DMBs' mutual claims and liabilities are consolidated.

Reserves with the central bank are: kuna cash in vaults and kuna deposits with the central bank.

Foreign assets are the following forms of kuna and foreign currency claims on foreign legal entities and individuals: foreign cash in vaults, nostro letters of credit and other collateral's with foreign banks, securities, loans, equities and arrears. Unregulated claims on institutions of former Yugoslavia are shown separately.

Claims on central government and funds are the following forms of claims in kuna and foreign currency: securities, loans, equities and arrears (including claims for interest charged and due 30 and more days prior to the reporting date). Main forms of claims on the central government are shown separately: bonds issued in accordance with the Decree Law on the Transformation of Household Foreign Exchange Savings Deposits with Banks into the Public Debt of the Republic of Croatia, and bonds issued in accordance with the Law on the Issue of Bonds for the Restructuring of the Economy of the Republic of Croatia.

Claims on other domestic sectors include the following claims in kuna and foreign currency: securities, loans (including acceptances), equities and claims due.

Same forms of kuna and foreign currency claims are included in claims on other banking institutions and nonbank financial institutions, with one difference: *Claims on other banking institutions* also include deposits with those institutions.

Items *Demand deposits, Savings and time deposits, Foreign currency deposits* as well as *Bonds and money market instruments* comprise banks' liabilities to other domestic sectors, other banking institutions and nonbank financial institutions.

Demand deposits include giro and current accounts balances and other transferable deposits, decreased by currency in the payment system, i.e. checks in banks' vaults and checks in collection.

Savings and time deposits are: kuna sight deposits as well as kuna time and notice deposits.

Foreign currency deposits are: foreign currency sight deposits as well as foreign currency time and notice deposits.

Bonds and money market instruments are: banks' liabilities for securities issued (net) and loans obtained.

Foreign liabilities comprise the following forms of kuna and foreign currency liabilities to foreign legal entities and individuals: giro and current accounts, loro letters of credit and other collateral's, savings and time deposits, loans received

and liabilities due. Unregulated liabilities to institutions in former Yugoslavia are shown separately within foreign liabilities.

Central government and funds' deposits are all forms of DMBs' kuna and foreign currency liabilities (except restricted and blocked deposits) to the central government and funds.

Credit from central bank comprises loans obtained from the NBC and deposits by the NBC with DMBs. Repurchase of securities is also considered and treated as loan.

Restricted and blocked deposits comprise the following DMBs' liabilities: kuna and foreign currency restricted deposits by other domestic sectors, other banking institutions, nonbank financial institutions, central government and funds as well as foreign legal entities and individuals; households' blocked foreign currency deposits, regulated by the Decree Law on the Transformation of Household Foreign Exchange Savings Deposits with Banks into the Public Debt of the Republic of Croatia, foreign currency deposits by domestic sectors to cover outstanding liabilities due to foreign creditors and foreign currency deposits with former branches of banks with their headquarters in former Yugoslavia.

Capital accounts are share capital, reserves, provisions, current profit or loss, undistributed profits and f/c revaluation adjustments (net).

Other items (net) are unclassified liabilities decreased by unclassified assets.

Tables D2-D12

This group of tables (with the exception of Table D5) represents an elaborate presentation of appropriate items of claims and liabilities of DMBs' Accounts (Table D1).

Claims and *Liabilities* related to former branch banks with their headquarters in former Yugoslav bank's branches are shown under the separate item *Adjustment for former branch banks* with an exception of Table D8: Foreign currency deposits with DMBs, which does not contain this item. Foreign currency deposits with former branch banks are classified as restricted and blocked deposits, and therefore shown as a separate item in the Table D12.

Table D2: Deposit Money Bank's Foreign Assets

This table shows DMBs' claims on foreign legal entities and individuals.

Foreign assets of the DMBs comprise foreign assets in kuna and foreign currency as well as DMBs' claims on the former Yugoslavia and the

adjustment for former branches. Item *Claims on former Yugoslavia*, reported separately in its full amount in the Table D1, is in the Table D2 divided into claims of the DMBs (shown under item *Claims on former Yugoslavia*) and claims of former branches (shown as a separate item within *Adjustment for former branch banks*).

Claims on foreign banks and *Claims on foreign nonbanks* (total and by financial instruments) are shown separately within both foreign assets in kuna and in foreign currency. Within *Claims on former Yugoslavia*, those in kuna and in foreign currency are shown separately.

Table D3: Deposit Money Banks' Claims on the Central Government and Funds

The table shows kuna and foreign currency DMBs' claims on the central government and funds.

Bonds arising from blocked foreign currency savings deposits are issued in accordance with the Decree Law on the Transformation of Household Foreign Exchange Savings Deposits with Banks into the Public Debt of the Republic of Croatia

Big bonds are those issued in accordance with the Law on the Issue of Bonds for the Restructuring of the Economy of the Republic of Croatia.

Other claims are all other DMBs' kuna and foreign currency claims on central government and funds: securities, loans, equities, postponed interest arrears (claims for interest due but not payable before relations with foreign creditors are regulated) and arrears (including claims for interest due 30 and more days prior to the reporting date).

Adjustment for former branch banks refers entirely to other central government's bonds.

Table D4: Deposit Money Bank's Claims on Other Domestic Sectors

The table shows DMBs' kuna and foreign currency claims on other domestic sectors, classified according to financial instruments: bills of exchange, commercial bills, bonds, other short-term securities, loans and advances (including acceptances and commodity futures), equities and arrears.

By October 1994, foreign currency loans were granted only when counterparted by DMB's loan abroad, in bank's name and on behalf of the final beneficiary of the loan. Due to the fact that foreign debts are still not entirely regulated, there is an item *Postponed interest arrears*. It refers to claims on interest due at the original due date, but the

obligation to pay is postponed until relations with foreign creditors are regulated.

Adjustment for former branch banks refers in greater part to foreign currency loans to enterprises.

Table D5: Distribution of Deposit Money Banks' Loans by Domestic Institutional Sectors

The table shows data on kuna and foreign currency loans granted by DMBs to domestic sectors, including acceptances and commodity futures.

The above data do not include loans of former branch banks.

Table D6: Demand Deposits with Deposit Money Banks

The table shows demand deposits with DMBs, classified by domestic institutional sectors.

Demand deposits are the sum of other domestic sectors', other banking institutions' and nonbank financial institutions' giro and current accounts balances, as well as other transferable deposits, decreased by currency in the payment system, i.e. by amount of checks in banks' vaults and checks in collection.

Adjustment for former branch banks mostly refers to demand deposits by private enterprises and households.

Table D7: Time and Savings Deposits with Deposit Money Banks

The table shows *Savings deposits of households* in kuna as well as *Time and notice deposits* in kuna by other domestic sectors, other banking institutions and nonbank financial institutions with DMBs.

Adjustment for former branch banks refers in larger part to households' savings and time deposits.

Table D8: Foreign Currency Deposits with Deposit Money Banks

The table shows foreign currency savings and time deposits by other domestic sectors, other banking institutions and nonbank financial institutions with DMBs. Foreign currency savings deposits are all foreign currency sight deposits, while foreign currency time deposits also include foreign currency notice deposits.

Foreign currency deposits with former branch banks are not included in this table.

Table D9: Bonds and Money Market Instruments

The table shows DMBs liabilities for securities issued (net) and loans received from other domestic sectors, other banking institutions and nonbank financial institutions.

Money market instruments (net) comprise DMBs net liabilities for NBC bills, bills of exchange (issued and accepted) and other securities issued.

Bonds (net) comprise DMBs net liabilities for kuna and foreign currency bonds issued.

Other domestic borrowings comprises loans received, reported total and classified by institutional sectors.

Table D10: Deposit Money Banks' Foreign Liabilities

The table shows DMBs' total foreign currency and kuna liabilities to foreign legal entities and individuals, with the exception of restricted kuna and foreign currency deposits by foreign legal entities and individuals.

DMBs' foreign liabilities comprise foreign currency liabilities, foreign kuna liabilities, DMBs' liabilities to the former Yugoslavia and adjustment for former branches. Item *Liabilities to the former Yugoslavia*, which is reported separately in the Table D1, is here divided into part of the liabilities referring to DMBs (shown as item *Liabilities to the former Yugoslavia*) and the part referring to of former branches (reported as a separate item within the *Adjustment for former branch banks*).

Within foreign kuna and foreign currency liabilities, liabilities to foreign banks are reported separately from liabilities to foreign nonbanks (total and by financial instruments). Within liabilities to the former Yugoslavia, liabilities in foreign currency are reported separately from kuna liabilities.

Item *Postponed interest arrears* on foreign currency loans showing within foreign currency liabilities refers to liabilities for interest due on the original due date, but payable after the regulation of relations with foreign creditors.

Table D11: Central Government and Funds Deposits with Deposit Money Banks

The table reports total DMBs' kuna and foreign currency liabilities to the central government and funds, with the exception of restricted (kuna and foreign currency) deposits by the central government and funds with DMBs.

Kuna and foreign currency deposits by Republic of Croatia and republic funds are shown separately. Kuna deposits comprise demand deposits, kuna time and notice deposits, and kuna

loans obtained from the central government and funds. Foreign currency deposits comprise foreign currency sight deposits, as well as foreign currency time and notice deposits.

The table does not state the item *Adjustment for former branch banks* because the salvage value of former branch does not include liabilities to the central government and funds.

Table D12: Restricted and Blocked Deposits with Deposit Money Banks

The table shows restricted and blocked deposits by the central government and funds, other domestic sectors, other banking institutions, nonbank financial institutions and foreign legal entities and individuals with DMBs.

Restricted deposits include three categories of deposits: restricted (kuna and foreign currency) deposits, blocked foreign currency deposits and foreign currency deposits with former branch banks.

Blocked foreign currency deposits include households' foreign currency deposits regulated by the Decree Law on the Transformation of Household Foreign Exchange Savings Deposits with Banks into the Public Debt of the Republic of Croatia, as well as domestic sectors' deposits regulated by the Decree Law on the Settlement of Arrears to External Creditors.

Table E1: Savings Banks' Accounts

Savings banks' accounts include the data on savings banks' claims and liabilities. Savings banks' mutual claims and liabilities are consolidated.

Reserves are savings banks' kuna cash in vaults and kuna deposits with the NBC.

Foreign assets refer to foreign currency in savings banks' possession either within arrangements which are in the process of liquidation due to the adjustment to the new Law on Banks and Savings Banks or within arrangements with DMBs regarding performing currency exchange transactions.

Claims on central government and funds are all kuna and foreign currency claims on the Republic of Croatia and central government funds.

Claims on other domestic sectors are the following forms of kuna and foreign currency claims: securities, loans, equities and claims due. Claims on local governments and funds, enterprises and households, are shown separately within this item.

Claims on DMBs include the following forms of kuna and foreign currency claims on DMBs: savings and time deposits, securities, loans, equities

and arrears. Item *Claims on nonbank financial institutions* comprises the same forms of kuna and foreign currency claims.

Demand deposits comprises other domestic sectors' and nonbank financial institutions' kuna giro and current accounts balances as well as other transferable deposits.

Savings and time deposits are households' savings deposits in kuna as well as time and notice deposits by other domestic sectors, domestic deposit money banks and nonbank financial institutions.

Foreign currency deposits are households' foreign currency savings and time deposits. These deposits, however, represent transactions in liquidation owing to adjustment to the new Law on Banks and Savings Banks.

Bonds are liabilities by other banking institutions for securities issued (net), as well as loans received from other domestic sectors, domestic DMBs and nonbank financial institutions.

Foreign liabilities are foreign savings and time deposits in foreign currency. These deposits represent transactions in liquidation owing to adjustment to the new Law on Banks and Savings Banks.

Central government deposits are kuna time and notice deposits by the Republic of Croatia and central government funds.

Credit from central bank comprise kuna loans obtained from the National bank of Croatia.

Capital accounts are: share capital, reserves, provisions, current profit or loss, undistributed profit and f/c revaluation adjustment (net).

Other items (net) are unclassified assets decreased by unclassified liabilities.

Table F1 - Credit Rates of National Bank of Croatia

The table shows interest rates used by the NBC to calculate and charge interest on loans and on all other claims.

Lending NBC interest rates are being set by special decrees of the Council of the National Bank of Croatia, on annual basis. Exceptionally, since July 1995, interest rate charged by NBC on lombard credits has been 1.5% higher than the weighted average interest rate on NBC bills on voluntary basis (which serve as collateral for lombard credits) in cases when the weighted average interest rate is higher than 16.5. Congruently, from July 1995 onwards, the table reports weighted average interest rate on lombard credits.

Time series presented in the table contain certain breaches, due to changes in NBC's monetary policy instruments. Consequently, until November 1994, column 4 shows interest rates on regular

credits for maintenance of day-to-day liquidity, which were granted based on securities portfolio, and from December 1994 onwards, interest rates on lombard credits.

Furthermore, data shown in column 6 refer, until September 1994, to interest rates on special credits for savings deposits' payments and for payments from households' current accounts, and since October 1994 to interest rates on daily credits for savings deposits and current accounts in kuna. Daily credits, as opposed to special credits, are paid back on the same day.

Interest rates reported in column 9 refer to the use of statutory reserves, which was being used by the banks (in prescribed percentage) to maintain day-to-day liquidity until September 1994. Interest rates paid until September 1994 on the use of statutory reserve funds in amount above prescribed and/or for longer period than allowed are shown in column 10. Since October 1994, interest rates paid on the use of statutory reserve funds are the same as those used for any other form of financial undiscipline, in accordance with the late interest regulations (shown in column 11).

Until July 1994 the same interest rate was applied to funds used above amounts available on giro accounts and to inaccurately calculated or under-appropriated statutory reserves (reported in column 10). From July to September 1994, interest rate applied to the use of those funds was 21%, and since October 1994 the same interest rates have been applied as for other forms of financial undiscipline, shown in column 11.

Table F2: Deposit Rates of National Bank of Croatia

The table shows interest rates paid by the NBC on funds deposited with the NBC as well as on securities issued.

Interest rates paid by the NBC for appropriated statutory reserve funds are being set by the Council of the NBC. Until 7 October 1993, NBC was setting different exchange rates for statutory reserve funds based on savings and time deposits. Therefore, for that period the table reports weighted average interest rate on appropriated statutory reserve funds (column 3). From 8 October 1993 until the end of February 1994, NBC paid no interest on appropriated statutory reserve funds, and since March 1994, uniform rate has been applied to these funds.

Interest rates on NBC bills on obligatory basis are set by the Council of the NBC.

Until October 1993, interest rates on NBC bills on voluntary basis were also set by the Council of the NBC, while since November 1993, they have

been set at NBC bills' auction sales. Congruently, since November 1993, columns 5, 6 and 7 report weighted average interest rates attained in auctions of the NBC bills.

Until October 1994, interest rates on NBC bills on voluntary basis due in 30 and 90 days are reported in columns 6 and 7 respectively.

Table F3: Deposit Money Banks' Reserves on Obligatory Basis

This table shows data on monthly averages of day-to-day balances of reserves on obligatory basis by DMBs with the NBC.

Reserve requirement (column 3) represents the prescribed amount of funds banks are required to deposit on a special statutory reserve account with the NBC, or to maintain (in average) on their giro accounts or in vaults. This amount corresponds with the statutory reserve instrument of January 1995, while until December 1994 it comprised two instruments: statutory reserves and liquid assets requirement - LAR (except for the part in which banks were conforming to this requirement by registering NBC bills on voluntary basis).

Column 4 shows weighted average reserve requirement ratio as a percentage of the reserve requirement (column 3) in the reserve base (NBC prescribes different reserve requirement ratios for different categories of deposit).

Column 5 shows the portion of the reserve requirement banks are required to deposit on a special statutory reserves account with the NBC (until December 1994 this amount corresponds with the statutory reserves instrument, while since January 1995, banks have been required to deposit at least 75% of the total reserve requirement on a special account with the NBC).

Column 6 shows the percentage of the statutory reserves deposited with the NBC in the total reserve requirement.

Column 7 shows the total amount of other deposits with the NBC on obligatory basis, which comprises NBC bills on obligatory basis, part of NBC bills on voluntary basis used by the banks to maintain the prescribed minimal liquidity (LAR), and special statutory reserves.

Column 8 shows the total reserve requirement as a sum of reserve requirement and other deposits with the NBC on obligatory basis. Column 9 shows the percentage of total reserve requirement in the reserve base.

Column 10 shows weighted average remuneration rate for all forms of immobilized funds (i.e. for all components of total reserve requirement).

Column 11 shows the use of obligatory reserves, which includes use of appropriated statutory reserve funds (authorized and unauthorized), inaccurately calculated statutory reserves, non-maintenance of the prescribed minimal liquidity, i.e. (since January 1995) non-maintenance of the minimal average giro account and vault balance (determined in accordance with the calculation of statutory reserves), unregistered amount of the NBC bills on obligatory basis and inaccurately calculated special statutory reserves.

Table F4: Deposit Money Banks' Liquidity Indicators

The table reports monthly averages of day-to-day balances of some indicators of DMBs' liquidity.

Column 3 shows free reserves, defined as bank's total reserves (on giro accounts and in vaults) decreased by the minimal average giro account and treasury balance, as prescribed by instruments of the NBC (until December 1994 by the requirement for banks' minimal liquidity, and since January 1995 by statutory reserve requirement).

Column 4 shows the primary liquidity ratio as a percentage of monthly day-to-day free reserves averages in monthly day-to-day averages of deposits which constitute the reserve base.

Column 5 shows the monthly average of day-to-day balances of secondary liquidity sources used. Secondary liquidity sources comprise: use of statutory reserves (until October 1994), regular loans for maintenance of day-to-day liquidity (until November 1994), use of funds exceeding those available on bank's giro account (until October 1994), initial loans (since October 1994), lombard credits (since December 1994), intervention credits for overcoming illiquidity (since October 1994), as well as outstanding liabilities due to the NBC.

Column 6 reports monthly average of day-to-day balances of NBC bills on voluntary basis (until December 1994, this amount is decreased by the portion of voluntarily registered NBC bills used by banks to maintain the prescribed minimal liquidity).

Table G1: Deposit Money Banks' Credit Rates

The table contains weighted averages of DMBs' monthly interest rates on kuna and foreign currency loans, reported on a yearly basis.

Columns 3 and 4 show interest rates on the interbank daily and overnight money markets, according to information received from Money Market Zagreb. From December 1993 until May 1995, interest rates on overnight loans were identical

to the NBC discount rate. Until December 1993 and since July 1995, interest rates charged for overnight loans equaled to daily weighted average interest rates reached on the daily money market.

Data on DMBs' interest rates on kuna and foreign currency credits are based on DMBs' periodic reports. Basis for calculation of weighted averages are amounts of credits bearing corresponding interest rates, which were disbursed during the reported month, with the exception of interest rates on giro and current accounts credit lines, for which weighted averages were calculated based on the balance of these loans at the end of the reported month.

Column 5 shows interest rates on total (short-term and long-term) kuna credits not indexed to foreign currency. Interest rates on short-term kuna credits (shown in column 6) also include interest rates on discounted short-term securities (not indexed to foreign currency), weighted based on their face value.

Column 8 shows interest rates on total (short-term and long-term) kuna credits indexed to foreign currency, including interest rates on discounted short-term securities indexed to foreign currency.

Interest rates on foreign currency credits (columns 9, 10 and 11) refer to credits released in Deutsche Mark or US dollars in a reported month, while weighted averages are calculated based on their kuna equivalent using current exchange rate. Credits released in other currencies are not included in this table.

Relative significance of particular interest rates (reported in the last line of the table) refers to data for the last period included in the table. It is calculated as a percentage of corresponding credit category (to which exchange rates apply) in total credits included in the calculation of weighted averages for that period.

Table G2: Deposit Money Banks' Deposit Rates

The table shows weighted averages of monthly DMBs' interest rates on kuna and foreign currency deposits, reported on a yearly basis.

Data on interest rates on DMBs' deposits are obtained from DMBs' periodic reports.

Column 3 reports weighted averages of monthly interest rates on total kuna deposits (sight deposits, savings and time deposits) not indexed to foreign currency. Weighted averages of monthly interest rates on total kuna deposits indexed to foreign currency are reported in column 6.

Interest rates on foreign currency deposits refer to deposits received in Deutsche Mark or US

dollars, while weighted averages are calculated based on their kuna equivalent using current exchange rate. Deposits received in other foreign currencies are not included in the data reported in this table.

Basis for calculation of weighted averages are end-of-month balances of deposits. Exceptions are kuna and foreign currency time and savings deposits for which weighted averages are calculated (since July 1995) based on amounts of those deposits received during the reported month. Weighted averages of interest rates on total kuna and foreign currency deposits (columns 3 and 7) are weighted by the end-of-month balances of all categories included in the calculation.

Kuna and foreign currency deposits used as a credit collateral are included, while restricted deposits (deposits used for payment of imports and other restricted deposits) are not included into the calculation of weighted averages.

Table G3: Deposit Money Banks' Trade with Foreign Exchange

Data on trade with foreign exchange between DMBs comprise transactions of purchase and sale of foreign exchange on domestic foreign currency market. The transactions are classified by categories of participants (legal entities or individuals, banks, NBC). Source of data are DMBs periodic reports on trading with foreign exchange, sent to the NBC on a regular basis. The amounts are stated in Deutsche Mark, converted from other foreign currencies using the NBC's midpoint exchange rate (reporting period average).

Table H1-H4: Balance of Payments

Balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, fifth edition, 1993). Sources of data are following: reports of the State Bureau of Statistics, reports of transportation companies, reports of deposit money banks, Croatian Bank for Reconstruction and Development and the National Bank of Croatia.

Data on international flows of merchandise trade commodities are compiled by the State Bureau of Statistics on the basis of the customs declaration forms. Other data required for compilation of the balance of payments are collected and processed directly by the NBC.

Services are, except for the data on the international cargo and passenger transport, reported on cash-flow basis.

Earnings from traveling (tourism), are calculated as a total value of: purchase of foreign currency and checks from nonresident natural persons, foreign exchange remittances to accounts owned by companies offering tourist services, sales of domestic currency and traveler's checks abroad, sales of domestic goods and services for foreign currency to nonresident natural persons, foreign exchange checks and credit cards charges in the country, sales of foreign goods to nonresident natural persons, purchase of foreign currency in casinos, 25% of the value of purchase of currency and traveler's checks from resident natural persons and 25% of the value of cash and traveler's checks deposited to resident natural persons foreign currency accounts.

Expenditures from traveling (tourism) industry, are calculated as total value of: payments for business travels, scholarships and specialization, payments for tourist trips organized by domestic tourist agencies, 25% of the value of sales of foreign currency and traveler's checks to resident natural persons and 20% of the value of currency and checks drawn from resident natural persons' foreign currency accounts.

Other services include investment works, construction and installation projects abroad, representation fees, insurance, freight and forwarding services, postal services, costs of Croatian representative offices abroad, unclassified services and 25% of the value of foreign currency transfers from foreign currency accounts to foreign countries.

Current transfers are classified into two categories: transfers to the central government and transfers to other sectors. Transfers to and from the central government consist of retirement and social welfare payments, financial aid payments, gifts, as well as of import and export bearing no payment obligation. Credits of transfers to other sectors represent the total value of foreign remittances received. Debits of other sectors transfers represent 75% of the value of transfers from resident natural persons foreign currency accounts to foreign countries.

Direct foreign investments are calculated partly from the data on imports of goods to be invested in resident corporations, partly from the data on payments made by nonresidents in connection with investments in the Republic of Croatia.

Data on other investment are structured into following institutional sectors: monetary authorities, general government, banks and other sectors. The scope of sectors somewhat differs from the corresponding scope in the balance sheets of financial institutions. General government sector

includes the central government and funds, local government authorities and local funds. Banking sector includes DMBs.

Item *Other investments - assets - banks currency and deposits*, represents the change in total foreign currency held by banks authorized to do business with foreign countries, i.e. banks with full authorization. Inflow from foreign countries, reported in the item *Other investments - assets - other sectors - currency and deposits*, is calculated as a difference between the sum of 75% of the value of currency and traveler's checks deposited to resident natural persons' foreign currency accounts and 75% of the value of currency and checks purchased from resident natural persons and the sum of 80% of the value of currency and traveler's checks withdrawn from resident natural persons foreign currency accounts and 75% of the value of sale of currency and traveler's checks to resident natural persons.

Data on loans for all previously mentioned sectors are based in greater part on originally concluded and registered credit agreements included in the NBC database. These do not include unallocated debt of the former Yugoslavia.

Changes in the total current balances of the NBC's foreign currency reserves are calculated using current US dollars exchange rates for currencies that form the reserves, and they are denominated in US dollars on the day when the balance of payments is compiled (end of month, end of quarter or year).

Table H8: External Debt

The table shows the balance of external debt at the end of the period, in millions of US dollars, according to the NBC's midpoint foreign currency rate at the end of the period.

External debt is defined as total value of following liabilities for foreign credits: outstanding debt (including principal arrears) and interest arrears.

Data are formed following the criteria of the final user, i.e. these include foreign credits used by the final users from the Republic of Croatia (and also those for which the debtor to foreign country is a bank from the former Yugoslavia).

Interest arrears are estimated by using originally agreed interest rates and do not include late interest.

Short-term credits do not include the use of short-term interbank credit lines.

Unallocated debt of the former Yugoslavia is not included.
