MANUFACTURING INDUSTRY

Industrial production has grown 2.3% (at the annual level) in the last eight months. Since industrial production generates approximately one-third of domestic product, its growth - aided by growth of other vital sectors - promises a substantial growth in aggregate domestic supply. This is evident from increases in retail turnover (12.1%), effective working hours in construction (7.1%), passengers (2.3%), goods transported (11.1%) and tourist night-stays.

Industrial statistics data report August year-on-year growth at 9.3%, while the monthly average attained in September 1996 exceeds last year's average by 1.0%. Standard decomposition of the industrial production series results in the eleven-month growth of the trend cycle at an average rate of 0.8%, as well as this year's monthly seasonally-adjusted growth at an average rate of 1.2%.

An increase in industrial activity (compared to 1995 levels) was also noted in the investment goods industries (a high 14.7%) and in the intermediate goods industries (1.6%), while the activity levels in the consumer goods industries slightly lag behind last year's results (0.1%). Due to the crucial contribution intermediate goods industries and consumer goods industries make to industrial production (47.1% and 38.7%, respectively), significant growth in the production of investment goods (their share in industrial production amounts to 13%) does not significantly affect developments in aggregate manufacturing industry. Investment goods' fifteen-month upward trend should also be mentioned, as well as the eleven-month growth in intermediate goods. Following two years of mild oscillations, final consumption started another ascent five months ago.

All three earmarked industrial production components reported a

deficit in the international trade. However, investment products exports exceeded 1995 exports by 0.2%, while intermediate products and consumer goods decreased by 2.2% and 0.7%, respectively. A decrease in imports was observed only in intermediate goods industries, while the other two components exceeded the last year's imports. A 6.0% decrease in imports of raw materials, along with growing domestic production, confirms their increasing use of domestic raw materials. In the absence of reliable statistics on investment, the 3.2% increase in imports of durable goods is the clearest indication available of increased investment. Consumers' products exceeded 1995 imports by 1.1%.

Inventories in the investment goods group were (high) 61.5% lower than in the first eight months of 1995. This, along with the growth of exports, testifies to excellent internal and external sales. Such decrease is usually a result of developments in inventories in the electrical and machine building industries. An increase in inventories was noted in intermediate goods industry (5.8%) and in consumer goods industry (1.5%). All of the above had a joint influence on the index of the physical volume of total inventories of finished products, causing a 2.2% decrease and pushing the trend cycle further downwards.

The total number of persons looking for employment registered with employment offices amounted to 256,091 at the end of August 1996. This is 0.4% less than in July 1996, and 10.0% more than in August 1995. 34% of the total figure refers to persons looking for employment for the first time. Approximately two-thirds of the population of the unemployed consists of persons who did not graduate from high school, while persons with higher or high education make up a relatively small percentage (7.1%).

TRADE

Based on the turnover level attained in the first eight months of this year, domestic trade recorded a real annual growth of 12.2%. The value of merchandise sold in August 1996 was 26.0% higher than in August 1995. The trend cycle has been showing a thirteen-month growth at the rate of 1.6%, with no reason for such tendencies not to continue until the end of the year. Data for the first eight months of this year were estimated using sample of leading businesses accounting for more than half of total retail turnover. Data for 1995 are final and based on all firms. In the first seven months of 1996, value added in retail trade increased by 3.7% on year-on-year level.

CONSTRUCTION,
TRANSPORTATION AND
TOURISM

Data on activities in construction, based on effective working hours at construction objects and sites, indicate a seven-month year-on-year growth at 7.1%. The number of construction workers performing various construction, installation and finishing works on site exceeds the 1995 figure by 3.3%. Data on the attained physical volume of construction activity and increased residential investment is supported by the data on the total surface of living quarters finished, which increased fivefold in 1996 compared to the first six months of 1995. Construction works performed by individual owners was not included - individual construction is added to the total of the construction works at the end of each year. The total value of construction works executed in the country represents works actually completed and not charged and collected. The nominal year-on-year index of the value of construction works executed in the country amounts to 145.4.

MONTHLY RATES OF CHANGE (%) OF RETAIL PRICES, PRODUCERS' PRICES AND COST OF LIVING

Transportation statistics were followed through transport of passengers and goods from one place to another. Passenger traffic comprises railway traffic, maritime transport, road and air traffic, while freight traffic comprises transportation of goods by railway, roads, pipelines, seas, rivers and air. In the first seven months of this year, the former exceeded last year's figure by 2.3%, while the latter exceeded the figure attained in the first seven months of 1995 by 11.1%. The trend cycle of goods transported has been stagnating during 1996 at a significantly higher level than last year, with the trend value 10.1% higher in 1996 than in 1995. Seasonal component excluded, the average monthly growth of merchandise trade reached 2.5%.

Tourism recorded a successful first eight months this year, both measured by the number of overnights realized and by tourist arrivals. Data on the number of overnights indicate an eight-month annual growth at the rate of 63%, while August alone surpassed August 1995 figures by 120%. The number of tourist arrivals exceeded the number recorded during the same period last year by 62%. The de-seasoned and trend value of overnights in 1996 exceed last year's figure by approximately 33%. Irregular influences are expected to diminish, thus enabling the tourist industry to support the growth of the entire services sector.

PRICES

Prices were continuously stable in September. Moreover, this stability reflected both in the rate of change in price levels and in variations in changes of relative prices, which were minimal. The three aggregate price indices we have been following continuously all recorded a minimal growth of 0.1% in September.

The decrease in the difference between developments in prices of goods and prices of services contributed to price stability. For the third consecutive month the difference has been so small that it does not even show on the graph. For instance, prices contained in the sample of retail prices increased in September by 0.2%. The only significant exception were the prices of agricultural products which decreased by 3.6%. The largest increase was recorded in prices of clothing and footwear (0.8%), which was most likely caused by the appearance of (at the beginning of the season slightly more expensive) fall collections in stores.

Similarly stable developments in prices were recorded in producers' prices. Prices of intermediate goods did not change in September, prices of investment goods fell by 0.1%, while prices of finished goods increased by 0.3%. Changes in branch prices, as illustrated by the last graph, are also quite uniform, all between the 3.3% decrease in the printing industry and 2.9% growth in the petroleum and gas industry. Generally speaking, variations in producers' prices reached their historical minimum in September 1996.

At this moment it is quite possible that this year's inflation rate could be even lower than last year at the December level. Measured by producers' prices, the level of prices was lower at the end of September 1996 than at the end of December 1995 by 0.4%. In the same period, retail prices grew by 2.4%, while the cost of living grew by 2.1%. The system is free of inflationary pressures because there has been no monetization of the deficit, the exchange rate has been stable, wages have been under control and inertial inflation has been eliminated, so that we can look forward to the end of the year with optimism.

SEASONALLY ADJUSTED REAL EXPENDITURES BY HOUSEHOLDS' SECTOR (H), REAL INVESTMENT EXPENDITURES (I) AND REAL GOVERNMENT'S EXPENDITURES ON GOODS AND SERVICES (G) - Constant prices, January 1993.

Note: definitions H, I and G do not correspond to SNA definitions.

STRUCTURE OF REAL EXPENDITURES

WAGES AND AGGREGATE DEMAND

The real net wage paid per employee was 4.7% higher in August than that paid in July this year, i.e. 5.4% higher compared to the year average. With the exclusion of wages in June and July, which contained payments of summer vacation bonuses, August wages exceeded the average of the first five months of this year by 7.5%. Earnings from regular employment, for instance, were 6.2% higher than in the same period last year.

The average real gross wage, which includes all kinds of net payments and legally prescribed payment allocations (contributions, taxes and surtaxes), was 7.5% higher than in the same period last year.

Aggregate real domestic spending in the first seven months of this year exceeded last year's figure by 6.4%. At the same time, it was 16.9% higher than in the previous month, thus opening a possibility for the realization of domestic supply and further activation of production resources. Payments for materials, services and goods by the general government sector exceeded last year's figures by 1.8% in real terms, while still showing tendencies of growth. Expenditures of the household sector, measured through revenues of the productive and non-productive branches of the economy from the regular activities by households, increased by a significant 9.9%. The surplus of demand was covered by the external sector, consequently generating a deficit in the foreign merchandise trade in the first eight months of this year. Investment activity on the monthly level can, at the time, only be interpreted from indicators of capital spending of the state budget, data on imports of capital equipment and direct foreign investment. The above data, along with the data on growing savings of the private sector, indicate a revival of investment in long-term assets.

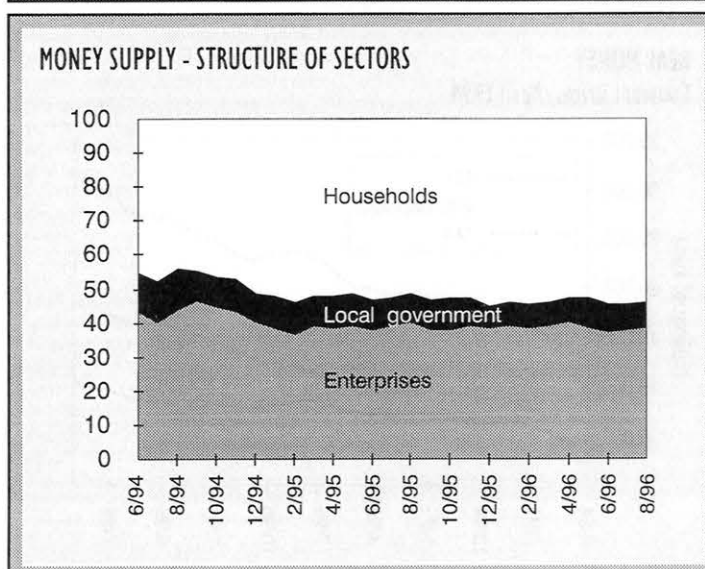

MONETARY DEVELOPMENTS

According to final data, August ended calmer than expected. The dynamic developments in monetary aggregates were surprising. They surpassed the expected September values during the first twenty days of the month. Definite conclusions on September cannot be given before the final data are made available, but a comparison of developments in August and September can be made. Most significant of all was the fact that the extremely intense purchase of foreign currency during the summer months, exceptional liquidity of banks and powerful developments in aggregates had no influence on prices. Almost stone-still prices in August and September of this year showed absolutely no reaction to such tendencies in the aggregates.

The money supply grew in August by 255 million kuna or 2.5%, only to grow by another 391 million kuna or 3.7% in the first twenty days of September. Cash grew by 68 million kuna in August, while at the same time deposit money grew by 187 million kuna.

Speaking of the money supply we must point out the trend of change in the structure which has been present for a significant span of time. The share of the household sector in the structure of money supply has been increasing. In the sector division, the household sector is accumulating cash, causing the transfer of liquidity towards that sector at the expense of the entrepreneurial sector. Money tends towards final consumption.

In the last couple of months, this has also been caused by the lack of remuneration of deposit money. If economic subjects really maximize their portfolios, all unnecessary liquidity will be transformed into different forms of assets. In that respect, the money supply is now a "purer" aggregate than it was before, when giro and current accounts bore larger interest rates. Now, these accounts should con-

tain only as much money as is necessary for transaction purposes.

Non-monetary kuna deposits grew by 103 million kuna i.e. by 3.7%. The quickest growth of quasi-money was experienced by the household sector, which currently owns over half of assets in that aggregate as well. The share of the household sector grew from 40% in July 1994 to 52% in August 1996. The entrepreneurial sector, on the other hand, lost over 15% of its share in the structure of quasi-money.

Although the changes in M2 have not been sudden (as we have noted them before), the household sector is now established as the major possessor of kuna. The explanation lies partly in foreign transfers, a portion of which finally finds its way to kuna accounts. However, this still indicates the more and more favorable position of the household sector in the structure of aggregates, at the expense of the entrepreneurial sector. If the consolidated central government sector were included in these aggregates, the position of the enterprises sector would have been even more unfavorable.

The structure of kuna loans by sectors continues to be stable. For the last two years, the share of enterprises in the distribution of these loans has been holding at 70%, the share of households at 30%. This only confirms that this flow forming broader money can only explain part of its increase, while the other part is autonomous and completely out of the control of the National Bank of Croatia. Part of the increase was a result of the de-blocking "old" foreign currency deposits, which transferred at the moment of de-blocking from other assets net into the monetary aggregates.

According to the final data for August, foreign currency deposits increased by 689 million kuna (i.e. 3.7%) in that month, and by another 311 mil kuna (1.6%) in the first twenty days of September. Especially interesting is the fact that in August this year, for the first time ever, the amount of households' sight deposits decreased. This

decrease was not very significant, a mere 35 million kuna, but it confirms the thesis on rational optimization of portfolios by economic subjects in changed conditions. Households' foreign currency deposits, on the other hand, increased in August 1996 by 619 mil kuna, i.e. by 6.9%. In this way banks are furnished by high quality sources of funds (although such fixed-term deposits are usually not long-term), while for monetary statistics it means more transparent boundaries between monetary aggregates, facilitating their better observation and analysis.

Monetary policy was extremely restrained throughout September. There were no further buy-outs of foreign currency through interventions. Following a period of intensive growth, foreign exchange reserves showed signs of decrease at the end of September, which represents a hidden effect of inter-currency exchange-rate relations.

During September 1996, lombard credits were used for 11 days. However, it was duly returned, so that the balance of lombard credit at the end of September 1996 was zero.

For several months now, the central government sector has been fulfilling its current liquidity requirements through very successful treasury bill auctions. However, in September 1996, the central government took out another 100 million kuna loan from the National Bank of Croatia, for a period of two weeks, and yet another 50 mil kuna for a period of ten days. At the end of the month, it returned this loan as well as an installment on the long-term credit which had become due.

The liquidity of the banking system was very good in September. Although the peaks from the previous month failed to recur, the average giro account balance was 491 mil kuna. Recording of voluntary treasury bills was also very high. The balance at the end of September amounted to 1,115.8 mil kuna, which is the highest balance of recorded voluntary treasury bills ever.

EXCHANGE RATE

The nominal exchange rate of the kuna to the German mark remained stable throughout September. The entire month was characterized by only slight oscillations, between 355 and 356 kuna for 100 German marks.

When observing tendencies in the exchange rate during a longer period of time, i.e. from the middle of August, when the kuna was the strongest, until the beginning of October, we can register a trend of very mild nominal depreciation, which was continued in the first couple of days in October, so that in the first week of October, the exchange rate reached the threshold of around 356.4 kuna for 100 German marks.

Depreciation is a natural phenomenon at this time of the year, when relations between supply and demand on the domestic foreign exchange market change toward decrease in supply of foreign currency. The pace of the depreciation is moderate. Should it continue with its current tempo, we can be pretty sure it will not disturb the stability of expectations and prices or induce interventions by the NBC.

Therefore, the nominal effective exchange rate started to depreciate slightly. Consequently, the mild appreciation observed in the last months has been stopped.

We are entering a period of the year characterized by mild depreciation of the real exchange rate. Therefore, the cumulative real appreciation of approximately 2.5% in the period from January until August 1996, will probably diminish as we approach the end of the year. We can conclude that this year will be remembered for its stable real effective exchange rate of the kuna. At this point, neither the foreign exchange market nor the price system disclose a likelihood of any significant disturbances which could render this conclusion invalid.

BALANCE OF PAYMENTS

The tendencies outlined throughout the year continued, with only one difference with regard to the recurrence of a significant amount of unregistered foreign currency inflow, i.e. the item net errors and omissions. This amounted to US\$ 613.8 mil in the first six months of the year (which is only 16.4% less than in the same period last year). Foreign exchange reserves of the NBC grew by US\$ 123.9 mil in the first six months of this year, with capital inflow amounting to US\$ 172.4 mil, and current account deficit amounting to US\$ 662.3 mil or 18.8% less than in the same period last year.

The main characteristics of developments in the balance of payments are still unchanged. The picture is however somewhat blurred due to the unexpected changes in the US dollar on the world foreign exchange market in 1996. This is also reflected in the item net errors and omissions. Therefore, it is better to follow the figures expressed in their kuna equivalents, where the first indications of positive tendencies can be noticed. Namely, kuna exports increased in the first eight months of this year by 3% compared to the same period last year, while the growth rate of imports amounted to a slightly lower 2.2%. Intermediate goods exports increased by 2.8%, while imports decreased by 1.4%. Positive developments were especially visible in international capital goods trade. Exports increased by 3.7%, imports by 8.1%, which indicates a recovery of domestic investment activity. Last, final consumption goods exports grew by 3.1%, while imports grew by 6.2%.

Bearing in mind the fact that the nominal effective kuna exchange rate has remained practically unchanged throughout the first eight months of this year, we conclude that the kuna indicators of developments in merchandise trade are currently more reliable than the dollar indicators.

MONEY MARKET AND INTEREST RATES

Tendencies on the Money Market - Zagreb have been reduced to oscillation of the daily average interest rate between 7.5% and 10%. A mild increase can be felt compared to the beginning of September. However, this is merely an increase illusion, because the interest rate oscillates under the influence of the weight of individual loans of different maturity. Depending on maturity, interest rates on these loans have oscillated between 7% and 12%. Generally, we can say that there are certain indications of subjects' inclination towards long-term loans (over 30 days), but suppliers prefer loans with revocation clause, so that they can get hold of their money quickly should they have a need for it. Supply is still vastly larger than demand. Yet their structure with regard to maturity often does not match, which leads to oscillations in interest rates.

Liquidity of the banking system continues to be very high. This is the cause of various developments in the Money Market: banks are looking at other investments. August and September were also characterized by a high rate of recording of voluntary treasury bills. A significant continuous decrease (since May!) in interest rates on recorded voluntary treasury bills should also be noted. Since the end of August, the interest rate on 35 days voluntary treasury bills has stabilized at between 7.95 and 8% on annual level, which corresponds with developments at the Money Market. The level of interest rates on 91 day voluntary treasury bills was at 9.4%. However these treasury bills have been losing their appeal, because banks still prefer shorter maturity. The last auction brought a decrease in the total amount recorded, due to the fact that on the money market, higher interest rates were achieved on one-month loans, making them more attractive for banks.

September's auctions of treasury bonds of the Ministry of finance were well accepted with 10% annual interest rates for bonds maturing in 45 days (4 September), and 9.5% for bonds maturing in 91 days (17 September).

Deposit money banks lowered their lending interest rates in August. The average interest rate on total kuna loans without the currency clause dropped by 2% (to 20.8%), while for kuna loans with the currency clause it dropped by 1%, compared to the previous month. The domination of short-term credit in both cases should be duly noted. The deviation between various banks' average interest rate levels (from 9.3% to 44.4% on loans without the currency clause, i.e. from 4.3% to 45.3% on loans with the currency clause) is also significant. The most significant creditor banks are keeping their lending interest rates on kuna loans without the currency clause at average values, but their interest rates on kuna loans with the currency clause are considerably different (lower) than the average. Deposit rates have generally been recording a slight decrease compared to the previous month (a decrease of almost 1% on kuna deposits since April 1996, and at the same time a slight increase in the case of foreign currency deposits). Deposit rates also differ considerably, depending on the bank (from 0.3% to 17.3% on kuna deposits and from 0.2% to 10.4% on foreign currency deposits). The margin between lending and deposit rates has been at approximately 15.3%. It has been decreasing continuously since April 1996, which is a good sign, but the fact of the matter is, it should be twice as low to be considered acceptable according to the world standards.

Registered unsettled payment orders were surprisingly low in July (they fell by 90 mil kuna), with decreased unsettled payment orders by enterprises and increased (and still increasing) unpaid orders by private individuals.

Classification and Presentation of Data on Claims and Liabilities

Data on financial institutions' claims and liabilities are classified according to institutional sectors and financial instruments. Institutional sectors are: financial institutions, central government and funds, other domestic sectors and foreign sector.

The financial institutions sector includes following sub-sectors: monetary authorities (the central bank), deposit money banks (DMBs), other banking institutions and nonbank financial institutions. The central bank is the National Bank of Croatia (NBC). Deposit money banks are institutions granted, by the National Bank of Croatia, the permission to perform banking business services in accordance with the Law on Banks and Savings Banks. Other banking institutions comprise savings banks. Since July 1995 savings banks have been under auspices, and have operated with the permission of the NBC. Nonbank financial institutions are financial institutions not classified as banks or other banking institutions (insurance companies, investment funds, savings cooperatives etc.)

The central government and funds comprises government institutions including Croatian Roads Company, Bank Rehabilitation Agency and Croatian Guarantee Agency, and following central government funds: Croatian health insurance fund, state retirement funds, employment agency, Croatian Privatization Fund, Croatian water company and Croatian Bank for Reconstruction and Development. Other domestic sectors are other central government funds (those not classified under the central government and funds sector), local government authorities and local funds, public and private companies and households, including craftsmen and non-profit institutions. In some tables other domestic sectors are divided into following sub-sectors: local governments and funds (including other republic funds, local government authorities and local funds), public and private enterprises, and households (including craftsmen and non-profit institutions).

Foreign sector includes foreign legal entities and individuals.

All data on claims and liabilities refer to balances at the end of the reporting period. Foreign exchange items are reported in their kuna equivalent at the midpoint NBC exchange rate at the end of the reporting period.

Table A1: Monetary and Credit Aggregates

The table shows data on some basic monetary and credit aggregates, including their monthly growth rates.

Reserve money has been taken over in its entirety from the Monetary Authorities Accounts (Table C1).

Money (M1) is defined in the same way as the corresponding item in the Monetary Survey (Table B1). It comprises cash outside banks, deposits with NBC by other banking institutions and other domestic sectors as well as DMBs' demand deposits. *Money (M1a)* comprises currency outside banks and DMBs' demand deposits, increased by the demand deposits of the central government and funds with DMBs.

Broadest money (M4) comprises *Money (M1)*, savings and time deposits, foreign currency deposits as well as bonds and money market instruments (all above components taken over from the Monetary Survey (Table B1).

Net domestic assets are defined as a difference between total liquid assets and foreign assets (net).

Domestic credit comprises DMBs' claims on other domestic sectors, other banking institutions and nonbank financial institutions.

Table B1: Monetary Survey

The monetary survey shows consolidated data from the Monetary Authorities Accounts (Table C1) and DMB's Accounts (Table D1).

Foreign assets (net) are the difference between total foreign assets and total foreign liabilities of the NBC and DMBs.

Domestic credit is the sum of corresponding items from Monetary Authorities Accounts and DMB's accounts. Claims on central government and funds are reported on the net basis, i.e. decreased by central government and funds' deposits with the NBC and DMBs.

The money is the sum of currency outside banks, deposits by other banking institutions with the NBC, deposits by other domestic sectors with the NBC and DMB's demand deposits (item *Demand deposits* in DMB's Accounts, Table D1).

Items *Savings and time deposits*, *Foreign currency deposits* as well as *Bonds and money market instruments* are entirely taken over from the DMB's Accounts, while item *Restricted and blocked deposits* represent the sum of correspondent items from Monetary Authorities Accounts (excluding DMBs blocked deposits with the NBC) and DMBs Accounts. *Other items (net)* are unclassified liabilities decreased by unclassified assets.

Table B2: Number of Reporting Deposit Money Banks and Savings Banks and Their Classification by Size

The table shows the total number of DMBs and savings banks which report monthly to the NBC. Their operation is shown in the DMBs/savings banks' accounts. *Total number of reporting DMBs* includes former branches of banks with their headquarters in the former Yugoslavia, which are currently under liquidation.

Due to the fact that savings banks were not legally obliged to report their operation to the NBC until June 1995, the total number of savings banks refers only to those savings banks which reported voluntarily to the NBC. In July 1995, coordination of the registration of savings banks with the Law on Banks and Savings Banks, and reporting to the NBC became compulsory. Since July 1995, total number of savings banks reporting to the NBC has corresponded with the total number of registered savings banks. The table also shows the classification of reporting DMBs and savings banks according to their total assets. Former branches of banks with their headquarters in the former Yugoslavia are classified in relation to the size of their total assets decreased by households' foreign currency deposits transferred to resident banks.

Table C1: Monetary Authorities Accounts

The table reports data on claims and liabilities by monetary authorities. *Foreign assets* include the following forms of foreign currency and kuna claims on foreign legal entities and individuals: monetary gold, holdings of special drawing rights, foreign cash in vaults, reserve position in the International Monetary Fund, current account balances with foreign banks, time deposits in foreign banks, foreign currency security investments and other claims.

Claims on central government and funds are loans and overdue claims on the budget of the Republic of Croatia. *Claims in kuna* are short-term loans granted for the purpose of overcoming the incoordination between incoming revenues and execution of budgetary expenditures, long-term loans granted by special decrees by the government of the Republic of Croatia, and overdue claims on the State Budget for liabilities to the IMF and foreign banks. *Claims in foreign currency* is a counter-entry to the liability to the IMF based on the succession of membership in that institution.

Claims on other domestic sectors are loans and overdue claims on other domestic sectors.

Claims on DMBs are credit to DMBs, deposits by the NBC with DMBs and overdue claims on DMBs. *Credit to DMBs* is split according to the type of financial instruments. *Refinancing of DMBs* include loans granted within general and selective quotas up to the end of 1993, as well as advances to DMBs for performing currency exchanges. Refinancing loans granted within the general and selective quotas were paid back in their entirety by the end of April 1994. In July 1994, they were formally revoked. Item *Lombard credits* comprises credits to DMBs for regular maintaining of the day-to-day liquidity, which were replaced by lombard credits in December 1994. Overdue claims on DMBs comprise loans due, giro account overdrafts and banks' undiscipline in allocation and maintenance of statutory reserve requirements.

Reserve money consists of currency outside banks, cash in DMBs' vaults, DMBs' deposits with the NBC, other banking institutions' deposits and other domestic sectors' deposits with the NBC. *DMBs' deposits* are: giro account balances, statutory reserves deposited on a special account with the NBC as well as NBC bills on obligatory basis. *Deposits by other banking institutions* are: giro account balances of savings banks as well as statutory reserves of savings banks' deposited on a special account with the NBC. *Deposits by other domestic sectors* are: other domestic sectors' giro account balances (this refers to accounts opened with the NBC by October 1994, since when they have been in the process of transition into deposits with the DMBs).

Restricted and blocked deposits are mainly import deposits. Blocked foreign currency deposits are funds deposited on a special account with the NBC for the purpose of covering the unpaid liabilities due to foreign creditors.

Foreign liabilities include use of IMF credits and liabilities to international financial institutions.

Central government and funds deposits are demand deposits and foreign currency deposits of the central government and funds with the NBC.

NBC bills are NBC bills on voluntary basis.

Capital accounts include reserves, funds, undistributed profit and f/c revaluation adjustment (net).

Other items (net) are unclassified liabilities decreased by unclassified assets of the NBC's accounts.

Table D1: Deposit Money Banks' Accounts

DMBs accounts include data on Croatian DMBs' claims and liabilities and data on claims and liabilities of former branches of banks with their

headquarters in former Yugoslavia, which are now in the process of liquidation. DMBs' mutual claims and liabilities are consolidated.

Reserves with the central bank are: kuna cash in vaults and kuna deposits with the central bank.

Foreign assets are the following forms of kuna and foreign currency claims on foreign legal entities and individuals: foreign cash in vaults, nostro letters of credit and other collateral's with foreign banks, deposits with foreign banks, securities, loans, equities and arrears. Unregulated claims on institutions of former Yugoslavia are shown separately.

Claims on central government and funds are the following forms of claims in kuna and foreign currency: securities, loans, equities and arrears (including claims for interest charged and due 30 and more days prior to the reporting date). Main forms of claims on the central government are shown separately: bonds issued in accordance with the Decree Law on the Transformation of Household Foreign Exchange Savings Deposits with Banks into the Public Debt of the Republic of Croatia, and bonds issued in accordance with the Law on the Issue of Bonds for the Restructuring of the Economy of the Republic of Croatia.

Claims on other domestic sectors include the following claims in kuna and foreign currency: securities, loans (including acceptances), equities and claims due.

Same forms of kuna and foreign currency claims are included in claims on other banking institutions and nonbank financial institutions, with one difference: *Claims on other banking institutions* also include deposits with those institutions.

Items *Demand deposits, Savings and time deposits, Foreign currency deposits* as well as *Bonds and money market instruments* comprise banks' liabilities to other domestic sectors, other banking institutions and nonbank financial institutions.

Demand deposits include giro and current accounts balances and other transferable deposits, decreased by currency in the payment system, i.e. checks in banks' vaults and checks in collection.

Savings and time deposits are: kuna sight deposits as well as kuna time and notice deposits.

Foreign currency deposits are: foreign currency sight deposits as well as foreign currency time and notice deposits.

Bonds and money market instruments are: banks' liabilities for securities issued (net) and loans obtained.

Foreign liabilities comprise the following forms of kuna and foreign currency liabilities to foreign legal entities and individuals: giro and current accounts, loro letters of credit and other

collateral's, savings and time deposits, loans received and liabilities due. Unregulated liabilities to institutions in former Yugoslavia are shown separately within foreign liabilities.

Central government and funds' deposits are all forms of DMBs' kuna and foreign currency liabilities (except restricted and blocked deposits) to the central government and funds.

Credit from central bank comprises loans obtained from the NBC and deposits by the NBC with DMBs. Repurchase of securities is also considered and treated as loan.

Restricted and blocked deposits comprise the following DMBs' liabilities: kuna and foreign currency restricted deposits by other domestic sectors, other banking institutions, nonbank financial institutions, central government and funds as well as foreign legal entities and individuals; households' blocked foreign currency deposits, regulated by the Decree Law on the Transformation of Household Foreign Exchange Savings Deposits with Banks into the Public Debt of the Republic of Croatia, foreign currency deposits by domestic sectors to cover outstanding liabilities due to foreign creditors and foreign currency deposits with former branches of banks with their headquarters in former Yugoslavia.

Capital accounts are share capital, reserves, provisions, current profit or loss, undistributed profits and f/c revaluation adjustments (net).

Other items (net) are unclassified liabilities decreased by unclassified assets.

Tables D2-D12

This group of tables (with the exception of Table D5) represents an elaborate presentation of appropriate items of claims and liabilities of DMBs' Accounts (Table D1).

Claims and Liabilities related to former branch banks with their headquarters in former Yugoslav bank's branches are shown under the separate item *Adjustment for former branch banks* with an exception of Table D8: Foreign currency deposits with DMBs, which does not contain this item. Foreign currency deposits with former branch banks are classified as restricted and blocked deposits, and therefore shown as a separate item in the Table D12.

Table D2: Deposit Money Bank's Foreign Assets

This table shows DMBs' claims on foreign legal entities and individuals.

Foreign assets of the DMBs comprise foreign assets in kuna and foreign currency as well as

DMBs' claims on the former Yugoslavia and the adjustment for former branches. Item *Claims on former Yugoslavia*, reported separately in its full amount in the Table D1, is in the Table D2 divided into claims of the DMBs (shown under item *Claims on former Yugoslavia*) and claims of former branches (shown as a separate item within *Adjustment for former branch banks*).

Claims on foreign banks and *Claims on foreign nonbanks* (total and by financial instruments) are shown separately within both foreign assets in kuna and in foreign currency. Within *Claims on former Yugoslavia*, those in kuna and in foreign currency are shown separately.

Table D3: Deposit Money Banks' Claims on the Central Government and Funds

The table shows kuna and foreign currency DMBs' claims on the central government and funds.

Bonds arising from blocked foreign currency savings deposits are issued in accordance with the Decree Law on the Transformation of Household Foreign Exchange Savings Deposits with Banks into the Public Debt of the Republic of Croatia

Big bonds are those issued in accordance with the Law on the Issue of Bonds for the Restructuring of the Economy of the Republic of Croatia.

Other claims are all other DMBs' kuna and foreign currency claims on central government and funds: securities, loans, equities, postponed interest arrears (claims for interest due but not payable before relations with foreign creditors are regulated) and arrears (including claims for interest due 30 and more days prior to the reporting date).

Adjustment for former branch banks refers entirely to other central government's bonds.

Table D4: Deposit Money Bank's Claims on Other Domestic Sectors

The table shows DMBs' kuna and foreign currency claims on other domestic sectors, classified according to financial instruments: bills of exchange, commercial bills, bonds, other short-term securities, loans and advances (including acceptances and commodity futures), equities and arrears.

By October 1994, foreign currency loans were granted only when counterparted by DMB's loan abroad, in bank's name and on behalf of the final beneficiary of the loan. Due to the fact that foreign debts are still not entirely regulated, there is an item *Postponed interest arrears*. It refers to claims

on interest due at the original due date, but the obligation to pay is postponed until relations with foreign creditors are regulated.

Adjustment for former branch banks refers in greater part to foreign currency loans to enterprises.

Table D5: Distribution of Deposit Money Banks' Loans by Domestic Institutional Sectors

The table shows data on kuna and foreign currency loans granted by DMBs to domestic sectors, including acceptances and commodity futures.

The above data do not include loans of former branch banks.

Table D6: Demand Deposits with Deposit Money Banks

The table shows demand deposits with DMBs, classified by domestic institutional sectors.

Demand deposits are the sum of other domestic sectors', other banking institutions' and nonbank financial institutions' giro and current accounts balances, as well as other transferable deposits, decreased by currency in the payment system, i.e. by amount of checks in banks' vaults and checks in collection.

Adjustment for former branch banks mostly refers to demand deposits by private enterprises and households.

Table D7: Time and Savings Deposits with Deposit Money Banks

The table shows *Savings deposits of households* in kuna as well as *Time and notice deposits* in kuna by other domestic sectors, other banking institutions and nonbank financial institutions with DMBs.

Adjustment for former branch banks refers in larger part to households' savings and time deposits.

Table D8: Foreign Currency Deposits with Deposit Money Banks

The table shows foreign currency savings and time deposits by other domestic sectors, other banking institutions and nonbank financial institutions with DMBs. Foreign currency savings deposits are all foreign currency sight deposits, while foreign currency time deposits also include foreign currency notice deposits.

Foreign currency deposits with former branch banks are not included in this table.

Table D9: Bonds and Money Market Instruments

The table shows DMBs liabilities for securities issued (net) and loans received from other domestic sectors, other banking institutions and nonbank financial institutions.

Money market instruments (net) comprise DMBs net liabilities for NBC bills, bills of exchange (issued and accepted) and other securities issued.

Bonds (net) comprise DMBs net liabilities for kuna and foreign currency bonds issued.

Other domestic borrowings comprises loans received, reported total and classified by institutional sectors.

Table D10: Deposit Money Banks' Foreign Liabilities

The table shows DMBs' total foreign currency and kuna liabilities to foreign legal entities and individuals, with the exception of restricted kuna and foreign currency deposits by foreign legal entities and individuals.

DMBs' foreign liabilities comprise foreign currency liabilities, foreign kuna liabilities, DMBs' liabilities to the former Yugoslavia and adjustment for former branches. Item *Liabilities to the former Yugoslavia*, which is reported separately in the Table D1, is here divided into part of the liabilities referring to DMBs (shown as item *Liabilities to the former Yugoslavia*) and the part referring to of former branches (reported as a separate item within the *Adjustment for former branch banks*).

Within foreign kuna and foreign currency liabilities, liabilities to foreign banks are reported separately from liabilities to foreign nonbanks (total and by financial instruments). Within liabilities to the former Yugoslavia, liabilities in foreign currency are reported separately from kuna liabilities.

Item *Postponed interest arrears* on foreign currency loans showing within foreign currency liabilities refers to liabilities for interest due on the original due date, but payable after the regulation of relations with foreign creditors.

Table D11: Central Government and Funds Deposits with Deposit Money Banks

The table reports total DMBs' kuna and foreign currency liabilities to the central government and funds, with the exception of restricted (kuna and foreign currency) deposits by the central government and funds with DMBs.

Kuna and foreign currency deposits by Republic of Croatia and republic funds are shown separately. Kuna deposits comprise demand deposits, kuna time and notice deposits, and kuna

loans obtained from the central government and funds. Foreign currency deposits comprise foreign currency sight deposits, as well as foreign currency time and notice deposits.

The table does not state the item *Adjustment for former branch banks* because the salvage value of former branch does not include liabilities to the central government and funds.

Table D12: Restricted and Blocked Deposits with Deposit Money Banks

The table shows restricted and blocked deposits by the central government and funds, other domestic sectors, other banking institutions, nonbank financial institutions and foreign legal entities and individuals with DMBs.

Restricted deposits include three categories of deposits: restricted (kuna and foreign currency) deposits, blocked foreign currency deposits and foreign currency deposits with former branch banks.

Blocked foreign currency deposits include households' foreign currency deposits regulated by the Decree Law on the Transformation of Household Foreign Exchange Savings Deposits with Banks into the Public Debt of the Republic of Croatia, as well as domestic sectors' deposits regulated by the Decree Law on the Settlement of Arrears to External Creditors.

Table E1: Savings Banks' Accounts

Savings banks' accounts include the data on savings banks' claims and liabilities. Savings banks' mutual claims and liabilities are consolidated.

Reserves are savings banks' kuna cash in vaults and kuna deposits with the NBC.

Foreign assets refer to foreign currency in savings banks' possession either within arrangements which are in the process of liquidation due to the adjustment to the new Law on Banks and Savings Banks or within arrangements with DMBs regarding performing currency exchange transactions.

Claims on central government and funds are all kuna and foreign currency claims on the Republic of Croatia and central government funds.

Claims on other domestic sectors are the following forms of kuna and foreign currency claims: securities, loans, equities and claims due. Claims on local governments and funds, enterprises and households, are shown separately within this item.

Claims on DMBs include the following forms of kuna and foreign currency claims on DMBs: savings and time deposits, securities, loans, equities

and arrears. Item *Claims on nonbank financial institutions* comprises the same forms of kuna and foreign currency claims.

Demand deposits comprises other domestic sectors' and nonbank financial institutions' kuna giro and current accounts balances as well as other transferable deposits.

Savings and time deposits are households' savings deposits in kuna as well as time and notice deposits by other domestic sectors, domestic deposit money banks and nonbank financial institutions.

Foreign currency deposits are households' foreign currency savings and time deposits. These deposits, however, represent transactions in liquidation owing to adjustment to the new Law on Banks and Savings Banks.

Bonds are liabilities by other banking institutions for securities issued (net), as well as loans received from other domestic sectors, domestic DMBs and nonbank financial institutions.

Foreign liabilities are foreign savings and time deposits in foreign currency. These deposits represent transactions in liquidation owing to adjustment to the new Law on Banks and Savings Banks.

Central government deposits are kuna time and notice deposits by the Republic of Croatia and central government funds.

Credit from central bank comprise kuna loans obtained from the National bank of Croatia.

Capital accounts are: share capital, reserves, provisions, current profit or loss, undistributed profit and f/c revaluation adjustment (net).

Other items (net) are unclassified assets decreased by unclassified liabilities.

Table F1 - Credit Rates of National Bank of Croatia

The table shows interest rates used by the NBC to calculate and charge interest on loans and on all other claims.

Lending NBC interest rates are being set by special decrees of the Council of the National Bank of Croatia, on annual basis. Exceptionally, since July 1995, interest rate charged by NBC on lombard credits has been 1.5 percentage point higher than the weighted average interest rate on NBC bills on voluntary basis (which serve as collateral for lombard credits) in cases when the weighted average interest rate is higher than 16.5%. Congruently, from July 1995 onwards, the table reports weighted average interest rate on lombard credits.

Time series presented in the table contain certain breaches, due to changes in NBC's monetary policy instruments. Consequently, until November 1994, column 4 shows interest rates on regular

credits for maintenance of day-to-day liquidity, which were granted based on securities portfolio, and from December 1994 onwards, interest rates on lombard credits.

Furthermore, data shown in column 6 refer, until September 1994, to interest rates on special credits for savings deposits' payments and for payments from households' current accounts, and since October 1994 to interest rates on daily credits for savings deposits and current accounts in kuna. Daily credits, as opposed to special credits, are paid back on the same day.

Interest rates reported in column 9 refer to the use of statutory reserves, which was being used by the banks (in prescribed percentage) to maintain day-to-day liquidity until September 1994. Interest rates paid until September 1994 on the use of statutory reserve funds in amount above prescribed and/or for longer period than allowed are shown in column 10. Since October 1994, interest rates paid on the use of statutory reserve funds are the same as those used for any other form of financial undiscipline, in accordance with the late interest regulations (shown in column 11).

Until July 1994 the same interest rate was applied to funds used above amounts available on giro accounts and to inaccurately calculated or under-appropriated statutory reserves (reported in column 10). From July to September 1994, interest rate applied to the use of those funds was 21%, and since October 1994 the same interest rates have been applied as for other forms of financial undiscipline, shown in column 11.

Table F2: Deposit Rates of National Bank of Croatia

The table shows interest rates paid by the NBC on funds deposited with the NBC as well as on securities issued.

Interest rates paid by the NBC for appropriated statutory reserve funds are being set by the Council of the NBC. Until 7 October 1993, NBC was setting different exchange rates for statutory reserve funds based on savings and time deposits. Therefore, for that period the table reports weighted average interest rate on appropriated statutory reserve funds (column 3). From 8 October 1993 until the end of February 1994, NBC paid no interest on appropriated statutory reserve funds, and since March 1994, uniform rate has been applied to these funds.

Interest rates on NBC bills on obligatory basis are set by the Council of the NBC.

Until October 1993, interest rates on NBC bills on voluntary basis were also set by the Council of the NBC, while since November 1993, they have

been set at NBC bills' auction sales. Congruently, since November 1993, columns 5, 6 and 7 report weighted average interest rates attained in auctions of the NBC bills.

Until October 1994, interest rates on NBC bills on voluntary basis due in 30 and 90 days are reported in columns 6 and 7 respectively.

Table F3: Deposit Money Banks' Reserves on Obligatory Basis

This table shows data on monthly averages of day-to-day balances of reserves on obligatory basis by DMBs with the NBC.

Reserve requirement (column 3) represents the prescribed amount of funds banks are required to deposit on a special statutory reserve account with the NBC, or to maintain (in average) on their giro accounts or in vaults. This amount corresponds with the statutory reserve instrument of January 1995, while until December 1994 it comprised two instruments: statutory reserves and liquid assets requirement - LAR (except for the part in which banks were conforming to this requirement by registering NBC bills on voluntary basis).

Column 4 shows weighted average reserve requirement ratio as a percentage of the reserve requirement (column 3) in the reserve base (NBC prescribes different reserve requirement ratios for different categories of deposit).

Column 5 shows the portion of the reserve requirement banks are required to deposit on a special statutory reserves account with the NBC (until December 1994 this amount corresponds with the statutory reserves instrument, while since January 1995, banks have been required to deposit at least 75% of the total reserve requirement on a special account with the NBC).

Column 6 shows the percentage of the statutory reserves deposited with the NBC in the total reserve requirement.

Column 7 shows the total amount of other deposits with the NBC on obligatory basis, which comprises NBC bills on obligatory basis, part of NBC bills on voluntary basis used by the banks to maintain the prescribed minimal liquidity (LAR), and special statutory reserves.

Column 8 shows the total reserve requirement as a sum of reserve requirement and other deposits with the NBC on obligatory basis. Column 9 shows the percentage of total reserve requirement in the reserve base.

Column 10 shows weighted average remuneration rate for all forms of immobilized funds (i.e. for all components of total reserve requirement).

Column 11 shows the use of obligatory reserves, which includes use of appropriated statutory reserve funds (authorized and unauthorized), inaccurately calculated statutory reserves, non-maintenance of the prescribed minimal liquidity, i.e. (since January 1995) non-maintenance of the minimal average giro account and vault balance (determined in accordance with the calculation of statutory reserves), unregistered amount of the NBC bills on obligatory basis and inaccurately calculated special statutory reserves.

Table F4: Deposit Money Banks' Liquidity Indicators

The table reports monthly averages of day-to-day balances of some indicators of DMBs' liquidity.

Column 3 shows free reserves, defined as bank's total reserves (on giro accounts and in vaults) decreased by the minimal average giro account and treasury balance, as prescribed by instruments of the NBC (until December 1994 by the requirement for banks' minimal liquidity, and since January 1995 by statutory reserve requirement).

Column 4 shows the primary liquidity ratio as a percentage of monthly day-to-day free reserves averages in monthly day-to-day averages of deposits which constitute the reserve base.

Column 5 shows the monthly average of day-to-day balances of secondary liquidity sources used. Secondary liquidity sources comprise: use of statutory reserves (until October 1994), regular loans for maintenance of day-to-day liquidity (until November 1994), use of funds exceeding those available on bank's giro account (until October 1994), initial loans (since October 1994), lombard credits (since December 1994), intervention credits for overcoming illiquidity (since October 1994), as well as outstanding liabilities due to the NBC.

Column 6 reports monthly average of day-to-day balances of NBC bills on voluntary basis (until December 1994, this amount is decreased by the portion of voluntarily registered NBC bills used by banks to maintain the prescribed minimal liquidity).

Table G1: Deposit Money Banks' Credit Rates

The table contains weighted averages of DMBs' monthly interest rates on kuna and foreign currency loans, reported on a yearly basis.

Columns 3 and 4 show interest rates on the interbank daily and overnight money markets, according to information received from Money Market Zagreb. From December 1993 until May 1995, interest rates on overnight loans were identical

to the NBC discount rate. Until December 1993 and since July 1995, interest rates charged for overnight loans equaled to daily weighted average interest rates reached on the daily money market.

Data on DMBs' interest rates on kuna and foreign currency credits are based on DMBs' periodic reports. Basis for calculation of weighted averages are amounts of credits bearing corresponding interest rates, which were disbursed during the reported month, with the exception of interest rates on giro and current accounts credit lines, for which weighted averages were calculated based on the balance of these loans at the end of the reported month.

Column 5 shows interest rates on total (short-term and long-term) kuna credits not indexed to foreign currency. Interest rates on short-term kuna credits (shown in column 6) also include interest rates on discounted short-term securities (not indexed to foreign currency), weighted based on their face value.

Column 8 shows interest rates on total (short-term and long-term) kuna credits indexed to foreign currency, including interest rates on discounted short-term securities indexed to foreign currency.

Interest rates on foreign currency credits (columns 9, 10 and 11) refer to credits released in Deutsche Mark or US dollars in a reported month, while weighted averages are calculated based on their kuna equivalent using current exchange rate. Credits released in other currencies are not included in this table.

Relative significance of particular interest rates (reported in the last line of the table) refers to data for the last period included in the table. It is calculated as a percentage of corresponding credit category (to which exchange rates apply) in total credits included in the calculation of weighted averages for that period.

Table G2: Deposit Money Banks' Deposit Rates

The table shows weighted averages of monthly DMBs' interest rates on kuna and foreign currency deposits, reported on a yearly basis.

Data on interest rates on DMBs' deposits are obtained from DMBs' periodic reports.

Column 3 reports weighted averages of monthly interest rates on total kuna deposits (sight deposits, savings and time deposits) not indexed to foreign currency. Weighted averages of monthly interest rates on total kuna deposits indexed to foreign currency are reported in column 6.

Interest rates on foreign currency deposits refer to deposits received in Deutsche Mark or US

dollars, while weighted averages are calculated based on their kuna equivalent using current exchange rate. Deposits received in other foreign currencies are not included in the data reported in this table.

Basis for calculation of weighted averages are end-of-month balances of deposits. Exceptions are kuna and foreign currency time and savings deposits for which weighted averages are calculated (since July 1995) based on amounts of those deposits received during the reported month. Weighted averages of interest rates on total kuna and foreign currency deposits (columns 3 and 7) are weighted by the end-of-month balances of all categories included in the calculation.

Kuna and foreign currency deposits used as a credit collateral are included, while restricted deposits (deposits used for payment of imports and other restricted deposits) are not included into the calculation of weighted averages.

Table G3: Deposit Money Banks' Trade with Foreign Exchange

Data on trade with foreign exchange between DMBs comprise transactions of purchase and sale of foreign exchange on domestic foreign currency market. The transactions are classified by categories of participants (legal entities or individuals, banks, NBC). Source of data are DMBs periodic reports on trading with foreign exchange, sent to the NBC on a regular basis. The amounts are stated in Deutsche Mark, converted from other foreign currencies using the NBC's midpoint exchange rate (reporting period average).

Table H1-H4: Balance of Payments

Balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, fifth edition, 1993). Sources of data are following: reports of the State Bureau of Statistics, reports of transportation companies, reports of deposit money banks, Croatian Bank for Reconstruction and Development and the National Bank of Croatia.

Data on international flows of merchandise trade commodities are compiled by the State Bureau of Statistics on the basis of the customs declaration forms. According to the existing methodology applied by the CBS, commodity imports include temporary commodity imports as well. Other data required for compilation of the balance of payments are collected and processed directly by the NBC.

Services are, except for the data on the international cargo and passenger transport, reported on cash-flow basis.

Earnings from traveling (tourism), are calculated as a total value of: purchase of foreign currency and checks from nonresident natural persons, foreign exchange remittances to accounts owned by companies offering tourist services, sales of domestic currency and traveler's checks abroad, sales of domestic goods and services for foreign currency to nonresident natural persons, foreign exchange checks and credit cards charges in the country, sales of foreign goods to nonresident natural persons, purchase of foreign currency in casinos, 25% of the value of purchase of currency and traveler's checks from resident natural persons and 25% of the value of cash and traveler's checks deposited to resident natural persons foreign currency accounts.

Expenditures from traveling (tourism) industry, are calculated as total value of: payments for business travels, scholarships and specialization, payments for tourist trips organized by domestic tourist agencies, 25% of the value of sales of foreign currency and traveler's checks to resident natural persons and 20% of the value of currency and checks drawn from resident natural persons' foreign currency accounts.

Other services include investment works, construction and installation projects abroad, representation fees, insurance, freight and forwarding services, postal services, costs of Croatian representative offices abroad, unclassified services and 25% of the value of foreign currency transfers from foreign currency accounts to foreign countries.

Current transfers are classified into two categories: transfers to the central government and transfers to other sectors. Transfers to and from the central government consist of retirement and social welfare payments, financial aid payments, gifts, as well as of import and export bearing no payment obligation. Credits of transfers to other sectors represent the total value of foreign remittances received. Debits of other sectors transfers represent 75% of the value of transfers from resident natural persons foreign currency accounts to foreign countries.

Direct foreign investments are calculated partly from the data on imports of goods to be invested in resident corporations, partly from the data on payments made by nonresidents in connection with investments in the Republic of Croatia.

Data on other investment are structured into following institutional sectors: monetary authorities, general government, banks and other sectors. The

scope of sectors somewhat differs from the corresponding scope in the balance sheets of financial institutions. General government sector includes the central government and funds, local government authorities and local funds. Banking sector includes DMBs.

Item *Other investments - assets - banks currency and deposits*, represents the change in total foreign currency held by banks authorized to do business with foreign countries, i.e. banks with full authorization. Inflow from foreign countries, reported in the item *Other investments - assets - other sectors - currency and deposits*, is calculated as a difference between the sum of 75% of the value of currency and traveler's checks deposited to resident natural persons' foreign currency accounts and 75% of the value of currency and checks purchased from resident natural persons and the sum of 80% of the value of currency and traveler's checks withdrawn from resident natural persons foreign currency accounts and 75% of the value of sale of currency and traveler's checks to resident natural persons.

Data on loans for all previously mentioned sectors are based in greater part on originally concluded and registered credit agreements included in the NBC database. These do not include unallocated debt of the former Yugoslavia.

Changes in the total current balances of the NBC's foreign currency reserves are calculated using current US dollars exchange rates for currencies that form the reserves, and they are denominated in US dollars on the day when the balance of payments is compiled (end of month, end of quarter or year).

Table H8: External Debt

The table shows the balance of external debt at the end of the period, in millions of US dollars, according to the NBC's midpoint foreign currency rate at the end of the period.

External debt is defined as total value of following liabilities for foreign credits: outstanding debt (including principal arrears), non paid interest and projection of principal payments.

Data are formed following the criteria of the final user, i.e. these include foreign credits used by the final users from the Republic of Croatia (and also those for which the debtor to foreign country is a bank from the former Yugoslavia).

Interest arrears are estimated by using originally agreed interest rates and do not include late interest.

Short-term credits do not include the use of interbank line of credits.
