^a Published by the CBS early in 2009, the revised GDP data for the 1995-2008 period include the estimation of non-observed economy, the new estimation of imputed dwelling rents and the new estimation and distribution of financial intermediation services indirectly measured (FISIM). The GDP data for 2006, 2007, 2008 and 2009 are based on quarterly estimates and preliminary. ^bCPI inflation rate.

[°]CPI inflation rate.
In accordance with the obligations assumed during the pre-accession negotiations with the European Commission, the new legislative provisions governing the monitoring of foreign borrowing entered into force early in 2008. The external debt balance at end-2007 is reported in accordance with the old system. In order to provide for the comparability of annual data, the external debt is also calculated in accordance with the new system which shows an upward adjustment in the end-2008 talso calculated in accordance with the advanced data processing system is in use since early 2009. For comparability reasons, the external debt balance at end-2008 is also calculated in accordance with the advanced system which shows an upward adjustment in the end-2008 balance, increasing it by EUR 366m or to EUR 39.491m. Data on round tripping, which stood at EUR 826m at end-2008 and EUR 1,499m at end-2009, are excluded from this figure.
Includes principal payments on bonds, long-term trade credits and long-term loans, as well as total interest payments net of interest payments on direct investment.
In the 1999-2001 period, total balance excluding capital revenues (GFS 1986) is shown on a cash basis. From 2001 on, it is shown on a modified accrual basis and includes CM, CR CPF and DAB. From 2008 on, CM is excluded from the total balance.

¹ Public debt is the debt of the general government. From 2008 on, it excludes the debt of CM. Sources: CBS, MoF and CNB.

Information on Economic Trends

Real Sector

The quarterly GDP estimate shows a decrease of 4.5% in real economic activity in the fourth quarter of 2009 relative to the same period in 2008. The annual rate of decrease in GDP, due to a slight positive quarterly growth and a favourable base effect, continued to drop compared with the previous three quarters. On an annual level, real GDP decreased by 5.8% from the previous year. An analysis of the components of aggregate demand shows that the annual decrease in economic activity in the last quarter of 2009 primarily resulted from the recurring acceleration of the annual rate of decrease in personal consumption from 6.9% in the third quarter to 7.5% in the fourth quarter. Due to the weak investment activity of all sectors, gross fixed capital formation also decreased at a higher annual rate in the observed period (11.3%), and government consumption dropped at an accelerated rate (3.3%) as a result of a decrease in expenditures on the use of

goods and services. In contrast, the negative annual rate of change in the volume of foreign trade in goods and services dropped markedly in the fourth quarter of 2009. Total imports declined at a somewhat sharper annual rate than goods and services exports, with the result that net foreign demand made a small statistically positive contribution to economic growth in the last three months of 2009.

Gross value added remained at approximately the same level in the last quarter of 2009 as in the first three quarters of the year, decreasing at an annual rate of 4.2% in the October to December period and by a total of 4.0% in the whole of 2009. GVA for the whole economy showed negative trends in the last quarter of 2009, primarily resulting from the negative changes in GVA in trade, industry and construction, with positive contributions to its growth in the observed period coming only from financial intermediation and agriculture.

The available monthly economic indicators suggest divergent trends in early 2010. According to seasonally and calendar adjusted data, industrial production increased slightly in

January and February from the low level in the previous quarter and the contraction of real retail trade turnover seems to have stopped in that period. On the other hand, negative changes in construction intensified in January, while tourist nights declined in the first two months from the same period in the previous year.

The volume of industrial production (as shown by seasonally and calendar adjusted data) rebounded slightly in January and February 2010 as compared with the last quarter of the previous year and its annual rate of change recovered significantly due to a base effect. These trends in industrial production apparently resulted from an increase in foreign demand, while the continued weakening of domestic demand impeded any stronger recovery, as can be concluded from the changes in the inventories of finished goods, trends in turnover in industry and the dynamics of goods imports and

The current dynamics of industrial production was for

the most part determined by an increase in the production

Figure 5 INDUSTRIAL PRODUCTION BY MAIN INDUSTRIAL GROUPINGS 2005 = 100, trend-cycle 150 140 130 120 110 100 90 80 1/05 90/ 90/9 90/6 1/08 5/08 80/6 1/09 5/09

Non-durable consumer goods

Durable consumer goods

Intermediate goods

Capital goods

of capital goods and durable consumer goods. The production of non-durable consumer goods also recorded positive current rates of change and the production of pharmaceutical products and preparations also increased markedly. In contrast, the production of intermediate goods dropped at a quarterly level. Inventories of almost all categories of goods decreased, a sign that companies were adjusting to the shifts in demand by changing both their current output and inven-

According to seasonally and calendar adjusted data, the volume of construction works continued to weaken from March 2009 to January 2010, dropping at a high annual rate of 16.4%, primarily due to a decrease in construction works on buildings and, to a lesser extent, in civil engineering works. Given last year's sharp decrease in the surface area of new buildings (both residential and non-residential) for which building permits had been issued, a leading indicator of construction activity, negative trends in construction are expected to continue.

Seasonally and calendar adjusted data point to a halt in the downward trend in retail trade turnover in the first two months of 2010. Due to the base effect, the annual rate of change (–7.9%) was markedly less negative than in the previous quarter. The drop in retail trade can be attributed to changes in real disposable household income and consumer pessimism, which has remained strong due to increasingly unfavourable conditions in the labour market. Purchases of motor vehicle purchases and parts and accessories of motor vehicles continued to register the highest rates of decrease (data are available only for January), while products exhibiting no price elasticity had the lowest rates of decrease (bread, tobacco products and medicines).

The number of nights stayed by tourists in commercial accommodation facilities decreased by 14.8% in January and February 2010 from the same period in 2009. The decrease in foreign tourist nights was sharper than that in domestic tourist nights, partly due to the base effect related to the European Handball Championship held in January 2009. It should be noted that the number of tourist nights registered at the very beginning of the year accounts only for a small portion of total tourist nights in a calendar year.

Employment and Wages

The negative developments in the real sector had a spill-over effect on labour market indicators. This effect, occurring first in late 2008, marked the previous year and even strengthened in January and February this year. The number of unemployed persons newly registered with the CES grew gradually, continuing to exceed the outflows from the register, with the result that unemployment increased steadily to 317,625 at the end of February. Such a high level of unemployment, greater than in the previous month and as much as 20.9% more than in the same month in the previous year, was last recorded in early 2005.

February was marked not only by the rise in unemployment, but also by a decrease in employment. The CPIA data

on the number of insured persons, being final and therefore more reliable employment indicators than the CBS data, which are preliminary and subject to revision, show a decrease of 5.2% in the number of insured persons in February 2010 from the same month in 2009. In addition to the preliminary data for February, the CBS released final data on employment in January. The number of employed had been revised downwards by 7,099 to 1,429,541, which is an annual decrease of 6.3% (95,939). This was the first downward revision of preliminary data on employment since early 1997.

Due to these developments in unemployment and employment, the registered unemployment rate increased to 18.3% at the end of February (compared with 14.8% in the same month in the previous year). According to the latest findings, the Labour Force Survey unemployment rate was on average higher in the first three quarters of 2009 (9.0%) than in the same period in 2008 (8.3%).

Albeit with a time lag, wages also adjusted to the weakening of economic activity, that is, recorded a decrease. As

Figure 13

shown by data on wages paid out in February, nominal gross and net wages decreased annually by 1.2% and 0.9% respectively. However, if the effect of the special tax is included, the annual rate of decrease in average monthly net wages is 3.7%. Real wages, deflated by the consumer price index, also dropped in February from the same month in the previous year, but at a lower rate than in January, due to a slightly sharper decrease in nominal wages and a marked slowdown in annual inflation growth.

Prices

Consumer price inflation continued to slow down in February 2010, with the annual inflation rate down from 1.1% in January to 0.7%. The annual rates of change in prices decreased for all major CPI components, except for industrial products excluding food and energy.

The largest contribution to the mentioned decrease in the annual consumer price inflation rate came from a slowdown

in the annual growth of energy prices, the contribution of heat energy and refined petroleum products prices decreasing the most. However, the annual rate of change in energy prices was quite high, primarily because the prices of refined petroleum products and gas were significantly higher in February 2010 than in the same period in the previous year. The main reason for a decrease in the annual rate of change in non-processed food products was a continued decline in meat prices. A further drop in the prices of milk and dairy products and a slowdown in the growth of bread and other bakery product prices resulted in a continued slowdown in the growth of processed food product prices. The annual rate of change in prices of services also decreased, remaining, however, higher than the annual rates of change in the prices of most major CPI components.

The annual rate of change in the prices of industrial products excluding food and energy, which increased but remained negative, had an opposite effect on consumer price inflation trends. This was primarily due to a slowdown in the annual decrease in footwear and clothing prices, brought about by the growth in these prices in February 2010 exceeding that in the same period in 2009.

The downturn trend in the annual rate of change in the core CPI continued in February, for this rate declined from -0.3% in January to -0.5% in February, primarily due to the mentioned decrease in meat prices.

The annual rate of change in industrial producer prices dropped from 3.0% in January to 2.7% in February. The annual rate of change in energy prices dropped the most, yet remained high, mainly due to refined petroleum product prices remaining considerably higher in February this year than in the same period in the previous year. The slowdown in the annual growth of producer prices was among other things due to a decrease in the annual rates of change in durable and non-durable consumer goods prices. The opposite effect was produced by an increase in the annual rates of change in intermediate and capital goods. All main industrial groupings (except energy) had negative annual rates of change in producer prices in February.

Exchange Rate

Exchange rate developments in March 2010 were marked by stability in the kuna/euro exchange rate, with the daily exchange rate of the kuna moving within a narrow range of +/-0.2% around the average of HRK 7.26/EUR. The stability of the kuna exchange rate was achieved against a background of high kuna liquidity in the system and a balance between foreign exchange supply and demand. The central bank carried out foreign exchange transactions only with the MoF in March, selling a net value of EUR 105.6m.

The kuna continued to depreciate against the US dollar in March 2010, standing at USD 5.39 at the end of the month, a depreciation of 0.9% on a monthly basis. This was a result of the continued strengthening of the US dollar versus the euro on the global foreign exchange market, mainly the outcome of risks related to the widening budget deficits of some eurozone countries, especially Greece, Portugal and Spain, and its possible impact on the stability of the common currency. Investor attention was also focused on the debate on the most suitable mechanism of providing assistance to Greece in order for the country to refinance its obligations. The ECB and Fed, in line with expectations, left the key interest rates in the eurozone and the US unchanged.

The depreciation of the kuna versus the US dollar was also the main cause of the nominal effective depreciation of the kuna against the currency basket. However, this depreciation was only 0.1% (from 28 February to 31 March), due to a slight appreciation of the kuna versus the euro, which carries the largest weight in the structure of the effective exchange rate. The kuna depreciated by 2.1% versus the Swiss franc and appreciated slightly by 0.3% versus the pound sterling in March.

Developments in the index of the real effective exchange rate of the kuna deflated by consumer prices differed from those in the same index deflated by producer prices in January 2010. The real effective exchange rate deflated by producer

prices weakened by 0.2% from the previous month thanks to the nominal effective depreciation of the kuna against the basket of currencies (0.5%) despite a faster growth of domestic than foreign prices. In contrast, consumer price developments were much more divergent, i.e. domestic prices increased while foreign prices decreased, with the result that the real effective exchange rate of the kuna deflated by consumer prices appreciated by 0.5% on a monthly basis.

Monetary Developments

Monetary developments were in the first two months of 2010 marked by a surge in the net domestic assets of the monetary system, brought about by an increase in net placements to the government and an almost equal decrease in net foreign assets, resulting in a stagnation of total liquid assets (M4). Money (M1) did not decrease in January and February 2010 as it usually does in that part of the year. These developments resulted from a strong growth in corporate demand deposits, which can be linked both to a decrease in corporate kuna time deposits and to an increase in the corporate sector's credit indebtedness to banks. As a result, and due to a favourable base effect, the annual rate of change in M1 rebounded to 4.1% at the end of February.

While money increased, kuna savings and time deposits continued to decrease at the beginning of 2010, due primarily to the mentioned drop in corporate kuna deposits, amounting to HRK 3.2bn in the first two months of 2010 alone. Kuna deposits of other financial institutions also suffered a slight decrease, while household kuna deposits increased at the beginning of the year. Total kuna non-monetary deposits continued to drop, accelerating the annual rate of decrease to 26.6% at the end of February.

Foreign currency deposits were the only monetary aggregate to show sustained growth despite worsened economic conditions. Having increased steeply in 2009, foreign currency deposits grew by a further HRK 1.6bn, with the lion's share of the growth, more than two thirds, accounted for by the household sector. Nevertheless, the annual growth rate of total foreign currency deposits edged downward to 11.1% at the end of February.

The increase in money in the first two months being approximately equal to the decrease in quasi-money, total liquid assets almost stagnated and their annual growth rate remained nearly unchanged at 0.9% at the end of February.

Bank placements to the non-banking sector increased slightly by HRK 1.1bn (0.5%) in the first two months of 2010, retaining, however, a negative annual rate of change of 1.1% at the end of February. The increase in placements in the first two months of 2010 was almost exclusively accounted for by lending to the corporate sector. Corporate placements increased by HRK 1.3bn in that period, continuing the positive trends from the last quarter of 2009. In contrast, household loans continued the negative trends from early 2010, accelerating their annual rate of decrease to 3.5% at the end of February. General purpose loans and car purchase loans continued to contract at the sharpest pace.

Banks' net claims on the central government surged by

HRK 6.4bn (31.5%) in the first two months of 2010, primarily due to a drop in government deposits resulting from the government's spending of the funds deposited with the CNB and banks in the last quarter of 2009, generated by an inflow of foreign exchange from foreign bond issues. In addition, government borrowing commitments and commitments on T-bills subscribed by domestic banks also increased in early 2010. Notwithstanding these trends, the annual growth rate of banks' net placements to the government stood at a low of 3.4% at the end of February due primarily to the large value of these placements in the base period.

Having increased in late December 2009, banks' net foreign assets decreased sharply by HRK 6.8bn and foreign liabilities dropped by HRK 3.4bn. These developments indicate that the increase in these two aggregates in late December last year was only temporary and that it resulted from banks' efforts to report as large as possible market shares at the year-end

Neither foreign assets nor foreign liabilities changed significantly in February, with the result that the net foreign position of banks remained almost unchanged from January at –HRK 34.0bn, an increase of 5.5% from the end of the same month last year.

Kuna liquidity remained strong and the kuna exchange rate continued to be stable in March 2010. There was still no need for open market operations or for any other significant use of or change to monetary policy instruments. This reflected the continued efforts of the central bank to ensure adequate liquidity levels in order to spur bank lending and the recovery of the overall economy, while maintaining the stability of prices and the financial system.

The high liquidity of the banking system in March dropped only briefly early in the month when government kuna deposits with the CNB increased on account of the funds raised through domestic bond issues. After a few days following the increase, the government used the bulk of these funds to repay domestic bonds that fell due on 8 March, and the liquidity of the system returned to the previous level. In addition, the funds from loans granted by banks to the CBRD following

the reduction of the reserve requirement rate in February were remitted to the government kuna account with the CNB in March within the government's incentive programme for economic recovery. These funds will be gradually withdrawn during the realisation of the programme of financing enterprises using the funds granted at CBRD auctions.

Notwithstanding the mentioned outflows of reserve money from the system, banks' liquidity surpluses in settlement accounts amounted to an average of HRK 0.6bn in March, or to as much as HRK 5.3bn including the balances of banks' overnight deposits with the CNB, vigorously used throughout the month. Reserve money (M0) reached HRK 54.7bn, growing at an annual rate of 3.8% at the end of March.

CNB's international reserves nearly stagnated in March, standing at EUR 10.0bn, up 12.8% from the end of the same month last year. Net usable international reserves also remained almost unchanged at EUR 9.4bn, rising at an annual rate of 17.5%.

Money Market and Interest Rates

A period of exceptionally high liquidity in the domestic financial system, present since the end of the previous year, continued in February and March 2010. The relatively small demand for kuna financial funds kept money market interest rates at their historical lows in several years, requiring no reverse repo auctions to be held by the CNB.

The weighted interest rate on overnight interbank loans further dropped from 0.62% in January to 0.55% in February but slightly increased in March, to 0.77%. Concurrently, its daily volatility remained at a very low level, fluctuating within a relatively narrow range of 0.55% to 0.98%.

After being absent in January, auctions of T-bills were held three times in February and five times in March. Oneyear euro-denominated T-bills were auctioned in addition to kuna-denominated T-bills on all occasions. Due to very high system liquidity and the absence of T-bill auctions at the beginning of the year, investor demand was several times higher than the planned issue amounts in the reference period, narrowing the yield on T-bills of all maturities. Hence, weighted interest rates on 91, 182 and 364-day kuna T-bills fell from 5.30%, 5.55% and 6.06% respectively in December 2009 to 2.20%, 3.04% and 3.68% in March 2010. At the same time, the weighted interest rate on one-year euro-denominated Tbills dropped to its record low from the beginning of their regular issue (from 4.72% in December 2009 to 3.52% in March 2010). The total stock of subscribed T-bills increased from HRK 21.8bn at the end of January to HRK 23.2bn in late March 2010, due to an increase in the stock of kuna-denominated T-bills from HRK 11.8bn at the end of January to HRK 13.3bn at the end of March. The stock of euro-denominated T-bills, on the other hand, remained almost unchanged relative to the end of January, standing at EUR 1.4bn at the end of March.

The exceptionally high liquidity in the banking system, accompanied by more accessible and cheaper foreign capital, contributed to the stabilisation and the decrease of individual bank interest rates in the second half of 2009 and early in 2010. The high liquidity also affected bank deposit interest rates, reducing them to their several-year-long low late in 2009 and early in 2010.

This at the same time facilitated the stabilisation of bank lending interest rates which remained relatively high even after recent reductions.

Interest rates on short-term kuna corporate loans not indexed to foreign currency remained in February unchanged relative to their January level, halting the trend of their stronger fall present since mid-2009. Stagnating at 8.32%, these interest rates remained at their historical low from October 2008. Nevertheless, they were still somewhat higher than before the outbreak of the financial crisis in September 2008. Interest rates on long-term corporate loans indexed to foreign currency mildly decelerated in February compared with the beginning of 2010 but remained in the upper range of the interval in which they have fluctuated in the past year.

The weighted interest rate on short-term non-foreign cur-

rency indexed household loans, related to the dominating credit card loans and overdraft facilities, stagnated at a high 12.7% in February. These interest rates change extremely slowly, a crawling growth in them (observed from 2005) being somewhat more evident only in the annual averages that change at rates not higher than 0.4 percentage points. Interest rates on newly granted long-term household loans remained at 8.96% in February, after a slight decrease and a reversal of their trend late in 2009.

Having fluctuated sharply and hit record high levels at the turn of 2008-2009, interest rates on kuna time deposits not indexed to foreign currency decreased due to improved liquidity in the financial system, reaching record lows at the end of 2009. Early in 2010, they increased slightly relative to December 2009, from 2.52% to 2.64%. The movements of these interest rates primarily reflect a sharp fall in interest rates on corporate deposits with a maturity of up to one month, trends in which are closely related to money market developments. Interest rates on foreign currency time deposits were relatively stable at the end of 2009 and the beginning of 2010 (standing at 3.65% in January), falling more noticeably in February (by 0.33 percentage points or to 3.31%).

These lending and deposit interest rate trends resulted in the slight increase of interest rate spreads in February 2010, including the spread between "pure" kuna loans and deposits (8.95 percentage points) and the spread between foreign currency indexed loans and foreign currency deposits (4.53 percentage points).

Trade in Goods

According to the preliminary CBS data, total exports of goods stood at EUR 1.2bn (–3.6% relative to the same period in 2009) and total imports of goods at EUR 2.0bn (–10.8%) in the first two months of 2010. The negative foreign trade balance decreased by one fifth compared with the same period in 2009, while the imports/exports coverage rate increased from 54.9% to 59.4%.

Seasonally adjusted data for January and February 2010 point to the conclusion that positive indicators of the trade in goods, reported at the end of 2009 and suggesting a gradual recovery, were only short-lived. Specifically, the renewed contraction of the trade deficit in the first two months of 2010 (by 10.3% relative to the average for the previous quarter) was for the most part the result of the significant exports of other transport equipment (mostly ships). However, if we exclude this division from total trade in goods, we see that exports were lower than in the previous quarter. In addition, following the moderation of negative import trends in the second half of 2009, the beginning of 2010 again experiences the strong fall of imports, which also contributed to the decrease of the trade deficit.

If we exclude oil, refined petroleum products and other transport equipment, which are marked by a noticeable volatility, from the aggregate of the trade, exports of goods (according to the seasonally adjusted data) decreased by 2.7% in January and February relative to the average for the previous quarter after the quarterly growth in the last three months

Balance of Payments (preliminary data), in million EUR

of 2009. The SITC division of fish and preparations experienced the largest fall in exports; in 2009, the export growth of this division substantially moderated the decline in total exports. A noticeable export fall also marked electrical machinery, apparatus and appliances and natural and manufactured gas. In contrast, a slight increase was observed in exports of metalliferous ores and metal scrap, miscellaneous manufactured articles and furniture and parts thereof.

After moderating in the last quarter of 2009, the negative trend in imports (excluding ships and oil) was exacerbated in January and February. Hence, the average value of imports in the first two months of 2010, relative to the average for the last quarter of 2009, decreased by 3.4% (according to the seasonally adjusted data). As in most of the previous year, the fall in imports was largely contributed to by the significant decrease in imports of road vehicles. Furthermore, imports of capital goods continued to trend downward, including notably imports of machinery specialised for particular industries, general industrial machinery and equipment and industrial raw materials (iron and steel). A growth of imports was registered only in a small number of divisions, among which there are non-ferrous metals, artificial fertilisers and organic chemicals.

External Debt

Croatia's gross external debt (round-tripping transactions excluded) totalled EUR 42.5bn at the end of January 2010, a decreased of EUR 0.6bn relative to the end of 2009. This debt development is attributed mainly to the decrease of bank debt and partly of corporate debt, with the government sector reporting a slight increase in its foreign liabilities.

After the short-term debt increase in December 2009, banks decreased their foreign liabilities in January 2010 by EUR 0.5bn, the bulk of which included currency and deposits of non-residents. The balance of hybrid and subordinated instruments (i.e. the components of the direct investment-related debt), largely used by banks in previous years to ensure additional sources of funding, did not change in several consecutive months. Following the January decline in bank foreign liabilities, the share of bank external debt in total external debt fell to almost one fourth.

The external debt of other sectors (mostly enterprises and non-banking financial institutions, including the CBRD) continued its slight downward trend in the reference period, decreasing by another EUR 0.2bn (a trend already observed at the end of 2009). The debt of non-banking financial institutions fell the most, notably that of leasing companies, with the debt of the CBRD decreasing only at a smaller rate. En-

b Data on round tripping are not included

terprises in public and mixed ownership also reported a slight decrease in their debt amounts, while the debt of enterprises in majority private ownership stagnated at its December 2009 level.

The direct investment-related debt (round-tripping transactions excluded) rose by EUR 68m in January 2010, this growth being entirely attributed to enterprises in private ownership and partly offsetting the decrease in borrowing from foreign banks. In contrast, non-banking financial institutions decreased their debt to affiliated foreign creditors.

The debt of the government sector did not change to any substantial degree in January 2010 for there were neither larger withdrawals of new facilities nor repayments of due liabilities. This notwithstanding, the external debt balance slightly increased, due mostly to the assumption of some of the foreign liabilities of one public enterprise and the cross-currency changes related to the weakening of the reporting currency (the euro) against the US dollar. The external debt of the entire public sector decreased slightly in January, notably due to the repayment of some of the liabilities of the CBRD.

Government Finance

According to the MoF preliminary data, consolidated central government revenues fell by 5.0% in 2009 relative to 2008 due to adverse economic conditions, totalling HRK 114.1bn. The economic contraction led to a decrease in all key revenue sources. Tax revenues decreased the most; the fall in revenues from social contributions was significantly milder. As for data expressed on a cash basis, the observed developments are also attributed to the deterioration in the collection of taxes and contributions as a result of the steadily mounting illiquidity in the economy. A more substantial contribution to the growth of total revenues came from revenues from quasi-corporations and other taxes, as a consequence of the allocation of a portion of CNB 2008 profit to the government budget and the introduction of the special tax on salaries, pensions and other income.

Consolidated central government expenditures stood at HRK 121.0bn in 2009, increasing by 1.9% from 2008. Expenditures on social security benefits, as a consequence of increased expenditures on health care and pensions, and expenditures for civil servants and other government employees contributed the most to the growth of total expenditures. In contrast, expenditures on the use of goods and services and other expenditures decreased noticeably. The decrease in the latter item may in part be attributed to smaller transfers to Croatian Motorways (CM) of road fees and smaller investments in railway modernisation and construction and modernisation and acquisition of railway vehicles.

Net acquisitions of non-financial assets, although substantially lower than in 2008, remained significant, with the largest investment being made in long-term assets. In line with described developments, net borrowing (on a cash basis, GFS 2001) reached HRK 10.1bn in 2009 or 3.0% of GDP, which was considerably higher than in 2008. It should be noted that real government financing needs (excluding funds

needed for refinancing of foreign liabilities) were higher than the stated deficit, as the government had to meet its obligations under activated guarantees, largely extended to shipyards, which the Ministry of Finance registers as a rise in financial assets.

The needed funds were raised by borrowing, with one portion of borrowed funds being deposited with the CNB for the settlement of liabilities falling due in early 2010. Hence, the

debt reached HRK 115.8bn at the end of 2009, an increase of HRK 17.5bn. Funds were chiefly raised in the domestic market through loans and T-bill issues and by placing two bond issues in the foreign market. Contingent government debt arising from guarantees issued (largely for the insurance of foreign liabilities) rose substantially in 2009, ending December at HRK 50.7bn.

Statistical Survey

Classification and Presentation of Data on Claims and Liabilities

Data on financial institutions' claims and liabilities are classified according to institutional sectors and financial instruments. Institutional sectors are: financial institutions, central government and funds, other domestic sectors and foreign sector.

The financial institutions sector includes the following subsectors: monetary authorities (the central bank), banks, other banking institutions and non-banking financial institutions. The central bank is the Croatian National Bank (CNB). Banks are institutions to which the Croatian National Bank has issued a license to perform banking business services in accordance with the Banking Act, including savings banks during a transition period. Data on banks do not include claims and liabilities of banks undergoing bankruptcy proceedings, nor former branches of banks headquartered outside the Republic of Croatia. Other banking institutions comprise housing savings banks, savings and loan cooperatives and investment funds. Non-banking financial institutions are financial institutions not classified as banks or other banking institutions (e.g. insurance companies, pension funds).

The central government and funds consists of two subsectors, the Republic of Croatia and central government funds. Until December 2003, the subsector Republic of Croatia included government authorities, comprising the Croatian Roads, the Croatian Motorways

and the State Agency for Deposit Insurance and Bank Rehabilitation. The subsector central government funds includes the Croatian Institute for Health Insurance, the Croatian Pension Insurance Administration, the Croatian Employment Service, the Croatian Privatisation Fund, the Croatian Waters and the Croatian Bank for Reconstruction and Development.

Since January 2004, the Croatian Roads, the Croatian Motorways, and the State Agency for Deposit Insurance and Bank Rehabilitation have been reclassified, from the subsector Republic of Croatia to the subsector central government funds.

Other domestic sectors include local government authorities, public and other enterprises and households, including craftsmen and non-profit institutions providing services to households. The subsector other enterprises also comprises banks undergoing bankruptcy proceedings. In some tables other domestic sectors are divided into the following subsectors: local government (which comprises units of local and regional self-government), public and other enterprises, and households (including craftsmen and non-profit institutions).

Foreign sector includes foreign legal and natural persons.

All data on claims and liabilities refer to balances at the end of the reporting period. Foreign currency items are reported in their kuna equivalent at the CNB's midpoint exchange rate at the end of the reporting period.

^a Domestic credit decreased by a one-off HRK 2,759.4m.

Table A1: Monetary and Credit Aggregates

The table shows data on some basic monetary and credit aggregates, including their monthly growth rates. In September 1999, all the monetary aggregates were revised. In previous publications of the CNB, data on claims and obligations of savings banks were not included in the compilation of the monetary aggregates.

Reserve money is taken over in its entirety from the Monetary Authorities Accounts (Table C1).

Money (M1) is defined in the same way as the corresponding item in the Monetary Survey (Table B1). It comprises currency outside banks, deposits with the CNB by other banking institutions and other domestic sectors as well as banks' demand deposits. Money (M1a) comprises currency outside banks and banks' demand deposits, increased by the demand deposits of the central government and funds with banks.

Broadest money (M4) comprises Money (M1), savings and time deposits, foreign currency deposits as well as bonds and money market instruments (all components are taken over from the Monetary Survey, Table B1).

Net domestic assets are defined as a difference between total liquid assets and foreign assets (net).

Domestic credit comprises banks' claims on other domestic sectors, other banking institutions and non-banking financial institutions.

In May 1999, bankruptcy proceedings have been initiated against several banks so their assets and liabilities are excluded from monetary statistics. In April 1999, those banks' share in monetary aggregate M1 amounted to HRK 259.3m and in monetary aggregate M4 amounted to HRK 4,035.8m. Data for June 1999 are comparable with data for July 1999 if Domestic credit is increased by HRK 3,513.5m.

Table B1: Monetary Survey

The monetary survey shows consolidated data from the Monetary Authorities Accounts (Table C1) and Banks' Accounts (Table D1).

Foreign assets (net) are the difference between total foreign assets and total foreign liabilities of the CNB and banks.

Domestic credit is the sum of corresponding items from Monetary Authorities Accounts and Banks' Accounts. Claims on central government and funds are reported on a net basis, i.e. decreased by central government and funds' deposits with the CNB and banks.

Money is the sum of currency outside banks, deposits by other

banking institutions with the CNB, deposits by other domestic sectors with the CNB and banks' demand deposits (item Demand deposits in Banks' Accounts, Table D1).

Items Savings and time deposits, Foreign currency deposits as well as Bonds and money market instruments are entirely taken over from the Banks' Accounts, while item Restricted and blocked deposits represents the sum of corresponding items from the Monetary Authorities Accounts (excluding banks' blocked deposits with the CNB) and Banks' Accounts. Other items (net) are unclassified liabilities decreased by unclassified assets.

Table B2: Number of Reporting Banks and Savings Banks and their Classification by Total Assets

The table shows the total number of banks and savings banks during the transition period which report monthly to the CNB. Their operations are shown in the Banks' Accounts. Monetary statistics includes reporting institutions under winding-up and, until February 2005, institutions whose operating licences have been revoked, but

which have not initiated winding-up proceedings.

Special reporting requirements applied to savings banks until June 1995. Savings banks were not legally obliged to report on their operations, so that data up to June 1995 relate only to those savings banks that reported voluntarily to the CNB. From July 1995 on, the data cover all registered savings banks.

The table also shows the classification of reporting banks and savings banks according to their total assets.

^a From October 2001 to May 2003, Liabilities to foreign banks include also liabilities based on CNB bills subscribed by non-residents. ^b The CDA accounts with the CNB for the gross and net settlement of purchased securities are reclassified from the central government sector to other domestic sectors from December 2002 onwards.

Table C1: Monetary Authorities Accounts

The table reports data on claims and liabilities by monetary authorities

Foreign assets include the following forms of foreign currency and kuna claims on foreign legal and natural persons: monetary gold, holdings of special drawing rights, foreign cash in vault, reserve position in the International Monetary Fund, current account balances with foreign banks, time deposits with foreign banks and accrued interest, foreign currency security investments and other claims.

Claims on central government and funds are loans and overdue claims on the budget of the Republic of Croatia. In accordance with the Croatian National Bank Act that entered into force in April 2001, the Croatian National Bank may not extend credit to the Republic of Croatia. Hence, this item comprises only overdue claims on the budget of the Republic of Croatia based on the payment system operations and the liabilities to the IMF and foreign banks. Until April 2001, Claims in kuna were short-term loans granted for the purpose of overcoming timing differences between incoming revenues and execution of budgetary expenditures, long-term loans granted by special regulations by the government of the Republic of Croatia, and overdue claims on the budgetary central government, while Claims in foreign currency was a counter-entry to the liability to the IMF based on the succession of membership in that institution.

Claims on other domestic sectors are loans and overdue claims on other domestic sectors, including banks in bankruptcy proceedings.

Claims on banks are credits to banks and overdue claims on banks. Credits to banks comprise Lombard credits, short-term liquidity credits, other credits and reverse repo transactions. Item Lombard credits comprises credits to banks for regular maintaining of the day-to-day liquidity, which were replaced by Lombard credits in December 1994. Short-term liquidity credits, which have been granted since the beginning of 1999, also serve to bridge liquidity problems. Other credits include intervention credits, special credits for bridging liquidity problems granted in the past (initial credits, prerehabilitation credits), due but unpaid credits and deposits of the CNB with banks. From April 2005 on, reverse repo transactions are conducted on a weekly basis. Overdue claims on banks comprise settlement account overdrafts (until mid-1994) and banks' failure to correctly and promptly allocate and maintain statutory reserve requirements.

Since May 1999, Claims on other domestic sectors include overdue claims on banks against which bankruptcy proceedings have been initiated. Due to the reclassification of savings banks from the subsector other banking institutions to the subsector banks, data for Claims on banks and Claims on other banking institutions have been revised

Reserve money consists of currency outside banks, cash in banks' vaults, banks' deposits with the CNB, other banking institutions' deposits and other domestic sectors' deposits with the CNB. Banks' deposits are: settlement account balances, statutory reserves deposited on a special account with the CNB (including, from March 2006, special reserve requirement on liabilities arising from issued securities), CNB bills on an obligatory basis and overnight deposits. Deposits by other banking institutions included, until September 2003, settlement account balances of housing savings banks. Deposits by other domestic sectors are other domestic sectors' giro account balances which are deposited with the Croatian National Bank in accordance with law or other regulation.

Restricted and blocked deposits include required foreign currency reserves and accrued interest, restricted deposits and blocked foreign currency deposits. Banks are required to set aside the reserve requirements against certain foreign currency sources of funds and the marginal reserve requirements (from August 2004 on) in special accounts at the Croatian National Bank. Restricted deposits are kuna funds set aside on the basis of a court order or regulations, kuna funds set aside in the period between May 1999 and April 2002 and deposits of banks against which bankruptcy proceedings have been initiated. Blocked foreign currency deposits are funds that were set aside in special accounts at the Croatian National Bank for repaying unpaid amounts due to foreign creditors.

Foreign liabilities include use of IMF credits, liabilities to international financial institutions and foreign banks and accrued interest.

Central government and funds' deposits are demand deposits and foreign currency deposits of the Republic of Croatia and central government funds with the CNB, and CNB bills purchased by central government institutions.

CNB bills are kuna and f/c CNB bills on a voluntary basis, excluding CNB bills voluntarily purchased by central government institutions

Capital accounts include reserves, provisions and the income and cost accounts.

Other items (net) are unclassified liabilities decreased by unclassified assets of the Monetary Authorities Accounts.

Due to the reclassification of savings banks from the subsector other banking institutions to the subsector banks, data for Currency outside banks, Banks' cash in vaults, Banks' deposits and Deposits of other banking institutions were revised.

Table D1: Banks' Accounts

Banks' Accounts include data on banks' claims and liabilities. Banks' mutual claims and liabilities are consolidated.

Required reserves held at the central bank include kuna and foreign currency reserves. Kuna reserves include vault cash and kuna funds held in accounts at the central bank. Foreign currency reserves include foreign currency held in the CNB's foreign currency accounts.

Foreign assets are the following forms of kuna and foreign currency claims on foreign legal and natural persons: foreign cash in vaults, current account balances with foreign banks and time deposits with foreign banks (including loro letters of credit and other forms of collateral), securities, loans, and equities.

Claims on central government and funds are the following forms of claims in kuna and foreign currency: securities and loans.

Claims on other domestic sectors include the following claims in kuna and foreign currency: money market instruments, bonds, loans (including acceptances), and equities.

The same forms of kuna and foreign currency claims are included in claims on other banking institutions and non-banking financial institutions, with one difference: Claims on other banking institutions also include deposits with those institutions.

Items Demand deposits, Savings and time deposits, Foreign currency deposits as well as Bonds and money market instruments comprise banks' liabilities to other domestic sectors, other banking institutions and non-banking financial institutions.

Demand deposits include giro and current accounts balances and banks' obligations arising from kuna payment instruments issued, minus currency in the payment system, i.e. checks in banks' vaults and checks in collection.

Savings and time deposits are kuna sight deposits as well as kuna time and notice deposits.

Foreign currency deposits are foreign currency sight deposits as

well as foreign currency time and notice deposits.

Bonds and money market instruments are banks' liabilities for securities issued (net) and loans received. Issued subordinated and hybrid instruments, purchased by foreign investors, are excluded from this item.

Foreign liabilities comprise the following forms of kuna and foreign currency liabilities to foreign legal and natural persons: giro and current accounts, savings deposits (including loro letters of credit and other forms of collateral), time deposits, loans received and liabilities due. Issued subordinate and hybrid instruments, purchased by foreign investors, are also included in loans received.

Central government and funds' deposits are all forms of banks' kuna and foreign currency liabilities (except restricted and blocked deposits) to the central government and funds.

Credit from central bank comprises loans received from the CNB and deposits by the CNB with banks. Repurchase of securities is also considered and treated as a loan.

Restricted and blocked deposits comprise the following banks' liabilities: kuna and foreign currency restricted deposits by other domestic sectors, other banking institutions, non-banking financial institutions, central government and funds as well as foreign legal and natural persons, and households' blocked foreign currency deposits, regulated by the Act on Converting Households' Foreign Currency Deposits into the Public Debt of the Republic of Croatia.

Capital accounts are share capital, profit or loss for the previous and current year, retained earnings (loss), legal reserves, reserves provided for by the articles of association and other capital reserves, hedging reserves, unrealised gains (losses) from financial assets classified as available-for-sale assets, value adjustments and collectively assessed impairment provisions.

Other items (net) are unclassified liabilities decreased by unclassified assets, including the fair value of derivative financial instruments.

Tables: D2 – D12

This group of tables (with the exception of Table D5) provides a detailed analysis of the relevant asset and liability items from Table D1 (Banks' Accounts).

Table D8: Foreign Currency Deposits with Banks

The table shows foreign currency savings and time deposits by other domestic sectors, other banking institutions and non-banking financial institutions with banks. Foreign currency savings deposits are all foreign currency sight deposits and foreign currency payment instruments issued, while foreign currency time deposits also include foreign currency notice deposits.

Table D9: Bonds and Money Market Instruments

The table shows banks' liabilities for securities issued (net) and loans received from other domestic sectors, other banking institutions and non-banking financial institutions.

Money market instruments (net) comprise banks' net liabilities for CNB bills, bills of exchange (issued and accepted) and other securities issued.

Bonds (net) comprise banks' net liabilities for kuna and foreign currency bonds issued, as well as issued subordinated and hybrid instruments, excluding those purchased by foreign investors.

Other domestic borrowing comprises loans received, which are reported in the total amount and classified by institutional sectors.

Table D10: Banks' Foreign Liabilities

The table shows banks' total foreign currency and kuna liabilities to foreign legal and natural persons, with the exception of restricted kuna and foreign currency deposits by foreign legal and natural persons

Banks' foreign liabilities comprise foreign currency liabilities and

foreign kuna liabilities.

Within foreign kuna and foreign currency liabilities, liabilities to foreign banks are reported separately from liabilities to foreign non-banks (total and by financial instruments). Loans and advances also include issued subordinated and hybrid instruments purchased by foreign investors.

Table D11: Central Government and Funds' Deposits with Banks

The table reports total banks' kuna and foreign currency liabilities to the central government and funds, with the exception of restricted (kuna and foreign currency) deposits by the central government and funds with banks.

Kuna and foreign currency deposits by the Republic of Croatia and central government funds are shown separately. Kuna deposits comprise demand deposits, savings deposits, time and notice deposits, and loans received from the central government and funds. Foreign currency deposits comprise savings deposits, time and notice deposits, and refinanced loans and advances.

Table D12: Restricted and Blocked Deposits with Banks

The table shows households' restricted (kuna and foreign currency) deposits and blocked deposits.

Blocked foreign currency deposits include households' foreign currency deposits, regulated by the Act on Converting Households' Foreign Currency Deposits into the Public Debt of the Republic of Croatia.

Note:
Sector "Non-monetary financial institutions" includes other banking institutions and non-banking financial institutions.
Sector "Government" includes the central government and funds and local government.

Table E1: Housing Savings Banks' Accounts

Housing savings banks' accounts include data on claims and liabilities of the Croatian housing savings banks. All housing savings banks' claims and liabilities refer exclusively to domestic sectors.

Housing savings banks' required reserves held at the central bank include funds in vaults. Until September 2003, they also included kuna funds held in accounts at the central bank.

Claims on central government and funds are claims in kuna on the Republic of Croatia and central government funds.

Claims on other domestic sectors include kuna loans to local government and households.

Claims on banks include loans to banks, as well as deposits with banks, including, from October 2003 on, accounts for regular operations with banks.

Claims on other banking institutions include investments in investment funds.

Item Time deposits includes local government and households' time deposits.

Bonds and money market instruments are housing savings banks' liabilities for securities issued (net) and loans received.

Capital accounts are share capital, profit or loss for the previous and current year, retained earnings (loss), legal reserves, reserves provided for by the articles of association and other capital reserves, hedging reserves, unrealised gains (losses) from financial assets classified as available-for-sale assets, value adjustments and specific reserves for unidentified losses. Other items (net) are unclassified liabilities decreased by unclassified assets.

^a Weighted averages of weighted reporates achieved at regular reverse repo auctions of the CNB in the reporting month. ^b Breaks in the series of data are explained in notes on methodology. ^c Since 14 December 2005. ^d Since 31 December 2007.

Table F1: Credit Rates of the Croatian National Bank

The table shows interest rates used by the CNB to calculate and charge interest on credits from the primary issue and on all other claims.

Credit rates of the CNB are set by decisions of the Council of the Croatian National Bank, on a yearly basis. Exceptionally, from June 1995 interest rate charged by the CNB on Lombard credits was 1.5 percentage points higher than the weighted average interest rate on CNB bills on a voluntary basis (which serve as collateral for Lombard credits) in cases when the weighted average interest rate was higher than 16.5%. Congruently, from June 1995 to August 1996 the table reports the weighted average interest rate on Lombard credits.

Time series presented in the table contain certain breaks, due to changes in the CNB's monetary policy instruments.

Data shown in column 4 refer to the weighted averages of the weighted repo rates achieved at regular reverse repo auctions of the CNB in the reporting month.

Data shown in column 7 refer, until September 1994, to interest rates on special credits for savings deposits' payments and for pay-

ments from households' current accounts, and from October 1994 until September 1997 to interest rates on daily credits for savings deposits and households' current accounts in kuna. Daily credits, as opposed to special credits, are paid back on the same day. In October 1997, this instrument was replaced by daily credits for overcoming short-term liquidity problems that are collateralised by CNB bills. From December 1998 to April 1999, this credit is incorporated in Lombard credit, applying different interest rate for its usage within one day.

Data shown in column 8 refer, until December 1994, to interest rate on initial credits, and since 18 March 1998, to credits for overcoming liquidity problems of banks under evaluation for entry into rehabilitation and restructuring procedures and since February 1999, to interest rates on short-term liquidity credits. From December 1999 on, data show interest rates on short-term liquidity credit with a maturity over 3 months which is 1 percentage point higher than interest rate on Lombard credits. Interest rate on short-term liquidity credit up to 3 months is 0.5 percentage point higher than interest rate on Lombard credits.

^a Breaks in the series of data are explained in notes on methodology.

Table F2: Deposit Rates of the Croatian National Bank

The table shows interest rates used by the CNB to calculate and pay interest on funds deposited with the CNB and on issued securities.

Interest rates paid by the CNB for appropriated statutory reserve funds are set by a decision of the Council of the Croatian National Bank. Until April 2005, the appropriated statutory reserve funds included the calculated statutory reserve funds that were deposit in a special statutory reserve account with the CNB, or maintained (in average) in banks' settlement accounts, or deposited in a special account with the CNB for the settlement of net positions in the National Clearing System (NCS). From April 2005, they include the calculated statutory reserve funds allocated to a special statutory reserve account with the CNB (column 3).

Interest rates on CNB bills on an obligatory basis are set by a decision of the Council of the Croatian National Bank.

Interest rates on CNB bills on a voluntary basis are set at CNB bills' auction sales. Congruently, columns 5, 6 and 7 report the weighted average interest rates attained at auctions of CNB bills. From November 1994 through January 2001, columns 7 and 8 report interest rates on CNB bills on a voluntary basis due in 91 and 182 days respectively.

From April 1998 on, columns 9 through 13 report the weighted average interest rates on CNB bills on a voluntary basis in EUR and USD (until December 1998, in DEM and USD) attained at CNB bills' auctions as a weighted average of subscribed amounts in those two currencies.

Column 14 reports the interest rate on overnight deposits with the CNB.

Table F3: Banks' Reserve Requirements

This table shows data on monthly averages of day-to-day balances of banks' kuna and foreign currency reserve requirements with the CNB. Savings banks are included beginning in July 1999.

Column 3 shows the weighted average reserve requirement ratio as a percentage of the kuna and foreign currency reserve requirements (column 4) in the reserve base.

Reserve requirement (column 4) represents the prescribed amount of funds banks are required to deposit in a special statutory reserve account with the CNB, or to maintain (in average) in their settlement accounts and in vaults, or in accounts of liquid foreign currency claims (which include foreign cash and checks in foreign currency, liquid foreign currency claims maintained in the accounts with the high-grade foreign banks and foreign currency CNB bills).

Column 5 shows the amount of kuna reserve requirements. Between January 1995 and December 2000, this amount corresponded with the statutory reserve requirement instrument, while until December 1994 it comprised two instruments: statutory reserves and liquid assets requirement – LAR (except for the part in which banks were conforming to this requirement by registering CNB bills on a voluntary basis). In December 2000, reserve requirements in kuna and in foreign currency were unified, i.e. reserve requirements rate, periods for calculating, allocating and maintaining reserve requirements were unified, as well as a minimum percentage of the total reserve requirements deposited with the Croatian National Bank. From September 2001 on, column 5 includes also the f/c component of reserve requirements that is set aside/maintained in kuna.

Column 6 shows the amount of foreign currency reserve requirements, i.e. the prescribed amount of funds banks are required to deposit in the CNB's foreign currency accounts, or to maintain (in

average) in accounts of liquid claims. Until November 2000, the calculation base consisted of the average daily balances of household foreign currency savings deposits with a remaining maturity of up to 3 months, while starting from December 2000 the base consists of foreign currency sources of funds, including: ordinary foreign currency accounts, special foreign currency accounts, foreign currency accounts and foreign currency sight deposits, received foreign currency deposits and received foreign currency loans, as well as obligations arising from securities issued in foreign currency (excluding banks' equity securities). From November 2001 on, the base includes also hybrid and subordinated instruments.

Column 7 shows the total amount of other obligatory deposits with the CNB, including CNB bills on an obligatory basis, those CNB bills on a voluntary basis used by banks to maintain the prescribed minimal liquidity (LAR), special statutory reserves until July 1995, special reserve requirement on liabilities arising from issued securities from March 2006 to February 2009, statutory reserves on f/c deposits, f/c credits from foreign banks and guarantees for such credits and marginal reserve requirement (from August 2004 to October 2008).

Column 8 shows the portion of the kuna reserve requirement which banks deposit in a statutory reserve account with the CNB (until December 1994, this amount corresponded with the statutory reserve instrument, while since January 1995 a minimum percentage of the total reserve requirement banks are required to deposit in a special statutory reserve account with the CNB has been prescribed). In April 2005, this percentage was set at 70%.

Column 9 shows the portion of the foreign currency reserve requirement which banks deposit in the CNB's foreign currency accounts. The percentage for allocating the foreign currency component of reserve requirements calculated on the basis of foreign

currency funds of non-residents and foreign currency funds received from legal persons in a special relationship with a bank amounts to 100%, while the percentage for allocating the remaining portion of the foreign currency component of reserve requirements amounts to 60%.

Column 10 shows the weighted average remuneration rate on all forms of immobilised kuna funds which include reserve requirements and other obligatory deposits with the CNB.

Column 11 shows the weighted average remuneration rate on allocated funds in foreign currency, including the marginal reserve requirement funds (from August 2004 to October 2008). From November 2009 on, the CNB does not pay remuneration on the allocated foreign currency component of reserve requirements.

Table F4: Banks' Liquidity Indicators

The table reports monthly averages of day-to-day balances of some indicators of banks' liquidity. Savings banks are included beginning in July 1999.

Column 3 shows free reserves in kuna, defined as a difference between the average balance in the settlement account and the average balance in the vault (until October 2008). From November 2008 on, they are defined as a difference between the average balance in the settlement account in the kuna reserve requirement maintenance period and the minimal average settlement account balance prescribed

by the kuna reserve requirement calculation methodology.

Column 4 shows free reserves in foreign currency, defined as funds for the maintenance of foreign currency reserve requirements (foreign cash and checks in foreign currency, liquid foreign currency claims maintained in the accounts with the high-grade foreign banks and foreign currency CNB bills) decreased by the minimal required balance of these funds in the same period.

Column 5 shows the primary liquidity ratio as a percentage of monthly day-to-day kuna free reserves averages (column 3) in monthly day-to-day averages of deposits which constitute the reserve base.

Column 6 shows the monthly average of day-to-day balances of secondary liquidity sources used. Secondary liquidity sources comprise: Lombard credits (since December 1994), short-term liquidity credits (since February 1999) and overdue liabilities to the CNB.

Column 7 reports the monthly average of day-to-day balances of kuna CNB bills on a voluntary basis (until December 1994, this amount is decreased by the portion of voluntarily registered CNB bills used by banks to maintain the prescribed minimal liquidity).

Column 8 reports the monthly average of day-to-day balances of foreign currency CNB bills on a voluntary basis (in EUR and USD).

Column 9 reports the monthly average of day-to-day balances of kuna MoF treasury bills. Until September 2002, it shows the discounted value of treasury bills, while starting from October 2002, it shows their nominal value.

^a Relative significance is calculated as a percentage of corresponding credit category in total credits disbursed in the reporting month (according to data for the last period included in the table).

Note: A break in the time series occurred due to changes in the methodology used in interest rate statistics as of 1 January 2001. This especially refers to interest rates shown in columns 5, 6 and
7. Interbank credits, which bear relatively low interest rates, were, among others, excluded from short-term credits to enterprises. The increase in interest rates was also caused by the weighting method: all categories are weighted by the amounts of newly-granted credits, except credit lines whose relative share grew in the new coverage, which are weighted by book balances.

Table G1: Banks' Interest Rates on Kuna Credits Not Indexed to Foreign Currency

The table contains the weighted averages of banks' monthly interest rates on kuna credits not indexed to f/c, reported on a yearly basis.

Up to December 2001, data refer to the weighted averages of banks' monthly interest rates on kuna credits not indexed to f/c granted to legal persons (which included enterprises, the public sector, financial institutions, non-profit institutions and non-residents) and households, reported on a yearly basis. Savings banks are not covered.

From January 2002 on, data refer to the weighted averages of banks' monthly interest rates on kuna credits not indexed to f/c granted only to enterprises (public and other) and households, reported on a yearly basis.

Up to February 1996, columns 3 and 4 show interest rates on the interbank money market, according to information published by the Zagreb Money Market (ZMM). From March 1996 to August 2002, interest rates on the money market were calculated as the weighted monthly averages of the weighted daily interest rates and shown sep-

arately for trading in overnight credits and trading in other credits on the ZMM. In the period between May 1998 and January 2001, the repayment of credits granted on the interbank overnight market was guaranteed by banks' required reserves with the CNB.

As from Bulletin No. 157 columns 3 and 4 contain the revised data for the period from September 2002 onward. From September 2002 on, interest rates on overnight credits and other credits are calculated as the weighted monthly averages of the weighted daily interest rates on interbank demand deposit trading.

Columns 5 through 13 show the weighted averages of banks' monthly interest rates classified by maturity and sectors. Interest rates on short-term credits to enterprises also include interest rates on callable loans.

Data on banks' interest rates on kuna credits not indexed to f/c are based on banks' periodic reports. The basis for the calculation of the weighted averages are amounts of credits bearing corresponding interest rates, which were disbursed during the reporting month, with the exception of interest rates on giro and current account credit lines, for which the weighted averages were calculated based on the balance of these loans at the end of the reporting month.

a Relative significance is calculated as a percentage of corresponding credit category in total credits disbursed in the reporting month (according to data for the last period included in the table)

Table G2: Banks' Interest Rates on Kuna Credits Indexed to Foreign Currency and on Credits in Euros

The table contains the weighted averages of banks' monthly interest rates on kuna credits indexed to f/c and on credits in euros, reported on a yearly basis.

Up to December 2001, data refer to the weighted averages of banks' monthly interest rates on kuna credits indexed to f/c and on credits in euros (or German marks) granted to legal persons (which included enterprises, the public sector, financial institutions, non-profit institutions and non-residents) and households, reported on a yearly basis. Savings banks are not covered.

From January 2002 on, data refer to the weighted averages of banks' monthly interest rates on kuna credits indexed to f/c and on credits in euros granted only to enterprises (public and other) and households, reported on a yearly basis.

Data on banks' interest rates on kuna credits indexed to f/c and on credits in euros are based on banks' periodic reports. The basis for the calculation of the weighted averages are amounts of credits bearing corresponding interest rates, which were disbursed during the reporting month.

Columns 3 through 11 show the weighted averages of banks' monthly interest rates classified by maturity and sectors. Interest rates on short-term credits to enterprises also include interest rates on callable loans

Up to December 2001, interest rates on credits in euros (columns 12, 13 and 14) refer to credits released in German marks in the reporting month, and starting from January 2002, they refer to credits released in euros, while the weighted averages are calculated based on their kuna equivalent using the current exchange rate. Credits released in other currencies are not included in this table.

a Relative significance is calculated as a percentage of corresponding deposit category in total deposits received in the reporting month (according to data for the last period included in the table).

Table G3: Banks' Interest Rates on Kuna Deposits Not Indexed to Foreign Currency

The table contains the weighted averages of banks' monthly interest rates on kuna deposits not indexed to f/c, reported on a yearly basis.

Up to December 2001, data refer to the weighted averages of banks' monthly interest rates on kuna deposits not indexed to f/c received from legal persons (which included enterprises, the public sector, financial institutions, non-profit institutions and non-residents) and households, reported on a yearly basis. Savings banks are not covered.

From January 2002 on, data refer to the weighted averages of banks' monthly interest rates on kuna deposits not indexed to f/c received from enterprises (public and other) and households, reported on a yearly basis.

Data on banks' interest rates on kuna deposits not indexed to f/c are based on banks' periodic reports.

Column 3 reports the weighted averages of monthly interest rates

on total kuna deposits (giro and current accounts, household savings deposits and time deposits) not indexed to f/c.

Column 4 shows the weighted averages of monthly interest rates on deposits in giro and current accounts not indexed to f/c received from enterprises (until December 2001, all legal persons) and households, and column 5 shows the weighted averages of monthly interest rates on total time deposits not indexed to f/c.

The basis for the calculation of the weighted averages for kuna time deposits not indexed to f/c are the amounts of those deposits received during the reporting month. The basis for the calculation of the weighted averages for deposits in giro and current accounts are the end-of-month book balances of those deposits. The averages of interest rates on total kuna deposits not indexed to f/c (column 3) are weighted by the end-of-month balances of all categories included in the calculation.

Kuna and foreign currency deposits used as collateral for credit are included, while restricted deposits (deposits used for payment of imports and other restricted deposits) are not included into the calculation of the weighted averages.

elative sig	nificance ^a	0.69	0.64	0.05	49.83	23.08	15.79	1.90	4.78	0.62

^a Relative significance is calculated as a percentage of corresponding deposit category in total deposits received in the reporting month (according to data for the last period included in the table).
^b Of the total amount of deposits to which this interest rate refers, 34.83% refers to enterprises.

Table G4a and b: Banks' Interest Rates on Kuna Deposits Indexed to Foreign Currency and on Foreign Currency Deposits

The table contains the weighted averages of banks' monthly interest rates on kuna deposits indexed to f/c and on foreign currency

deposits, reported on a yearly basis.

Up to December 2001, data refer to the weighted averages of banks' monthly interest rates on kuna deposits indexed to f/c and on foreign currency deposits received from legal persons (which included enterprises, the public sector, financial institutions, non-profit institutions and non-residents) and households, reported on a yearly basis. Savings banks are not covered.

From January 2002 on, data refer to the weighted averages of banks' monthly interest rates on kuna deposits indexed to f/c and on foreign currency deposits received from enterprises (public and other) and households, reported on a yearly basis.

Data on banks' interest rates on kuna deposits indexed to f/c and on foreign currency deposits are based on banks' periodic reports.

Column 3 reports the weighted averages of monthly interest rates on total kuna savings and time deposits indexed to f/c received from enterprises (until December 2001, all legal persons) and households, whereas the weighted averages of monthly interest rates on time deposits are shown in column 4 (short-term deposits) and column 5 (long-term deposits) respectively.

Up to December 2001, interest rates on foreign currency deposits refer to deposits received in German marks or US dollars, and start-

ing from January 2002, they refer to deposits received in euros and US dollars, while the weighted averages are calculated based on their kuna equivalent using the current exchange rate. Deposits received in other currencies are not included in this table.

The basis for the calculation of the weighted averages for kuna time deposits indexed to f/c and foreign currency time deposits are the amounts of those deposits received during the reporting month. The basis for the calculation of the weighted averages for savings deposits indexed to f/c are the end-of-month book balances of those deposits. From January 2002 on, the averages of interest rates on total kuna deposits indexed to f/c (column 3) are weighted by the end-of-month balances of all categories included in the calculation.

The average interest rate on total foreign currency deposits (column 6) refers to the weighted average of monthly interest rates on savings and foreign currency time deposits, which are weighted by the end-of-month balances of all categories included in the calculation.

The basis for the calculation of the weighted averages of monthly interest rates on total foreign currency savings deposits (column 7) are the end-of-month balances of those deposits.

The basis for the calculation of the weighted averages of monthly interest rates on total foreign currency time deposits (column 12) are the amounts of those deposits received during the reporting month. The same basis is applied in calculating the weighted averages of monthly interest rates on total short-term foreign currency deposits (column 13) and on total long-term foreign currency deposits (column 18).

Table G5: Banks' Trade with Foreign Exchange

Data on trade with foreign exchange between banks comprise the spot purchase and sale of foreign exchange in domestic foreign exchange market. Spot transactions are contracted obligations to buy/ sell foreign currency within maximally 48 hours.

The transactions are classified by category of participants (legal and natural persons, domestic and foreign banks and the CNB). Sources of data are banks' reports on trading with foreign exchange and statistical data on external payment operations.

Other Croatian National Bank transactions include foreign exchange sales and purchases on behalf of the Ministry of Finance.

^a As from Bulletin No. 146 the CBRD is reclassified from the subsector central government funds to the subsector non-banking financial institutions. The reclassification covers the entire statistical series (from January 1999 onwards). Moreover, as from the same number of the Bulletin, CM is reclassified from the subsector central government funds to the subsector public enterprises. The reclassification covers the statistical series from January 2008 onwards. ^b Data also include the round tripping which increases direct investment in Croatia and direct investment abroad by the same amount. This type of direct investment was recorded in December 2008 (EUR 825.7m) and August 2009 (EUR 666.5m). ^c Preliminary data.

Note: The item net errors and omissions also comprises the counter-entry of a part of revenues from travel services which relates to such revenues not stated in the banks' records.

Table: H1-H6: Balance of Payments

The balance of payments of the Republic of Croatia represents a systematic overview of the value of economic transactions performed by the Croatian residents with foreign countries within a particular period. It is compiled in accordance with the recommendations of the International Monetary Fund (Balance of Payments Manual, Fifth Edition, 1993). Data sources include: 1. reports of the government institutions (Central Bureau of Statistics and Croatian Institute for Health Insurance), 2. special reports of the Croatian National Bank (International Transaction Reporting System (ITRS), external debt relations, monetary statistics and reserve assets) and 3. estimates and statistical research carried out by the Croatian National Bank.

Balance of payments of the Republic of Croatia data are reported in three currencies: in euros (EUR), US dollars (USD) and domestic currency (HRK). In all cases, the same data sources are used and the same principles regarding the scope of transactions and the procedures for compiling particular items are applied. Since the original data are reported in different currencies, the transaction values are converted from the original currency into the reporting currency by

applying the exchange rate from the CNB exchange rate list in one of the following manners:

- by applying the midpoint exchange rate on the date of the transaction:
- by applying the average monthly or quarterly midpoint exchange rate in the case the transaction date is not available;
- by applying the end-of-period exchange rate for the calculation of a change in the transaction value between the two periods; the end-of-period balances reported in the original currency serve as a basis for calculating the change in the original currency value, which is converted, by applying the average midpoint exchange rate in the observed period, into the value of change in the reporting currency.

The Report of the Central Bureau of Statistics on foreign trade in goods of the Republic of Croatia represents the basic data source for the balance of payments items related to exports and imports. These data are adjusted, in accordance with the recommended compilation method, for coverage and classification. Accordingly, goods exports and imports in the balance of payments are reported at f.o.b. parity. The value of exports at this parity is already contained in the previ-

^a Preliminary data.

ously mentioned CBS Report, whereas the value of imports f.o.b. is estimated on the basis of research studies of the CNB on the stratified sample of importers. The resulting value serves as a basis for the estimate of the share of transportation and insurance services by which the original value of imports c.i.f., stated in the CBS Report, is reduced. In the 1993-2001 period, this share stood at 7.10% (estimated only on the basis of the largest and large importers), while from 2002 on it has amounted to 3.73%. The same research study, conducted by the CNB at the end of 2006 (comprising the imports in the previous year), showed that the share of transportation and insurance costs, after continuing to decrease, has reached 3.03%. This share was first applied in the calculations for the first quarter of 2007. In the period from 1993 to 1996, the value of imports was modified by estimates of imports in duty free zones, which have been included in the merchandise trade statistics since 1997. From 1996 on, goods exports and imports are modified by the data on repairs on goods and goods procured in ports by carriers. In addition, since 1999, based on the Survey on Consumption of Foreign Travellers in Croatia and Domestic Travellers Abroad, the item of goods exports has been modified by the estimated value of goods sold to foreign travellers and tourists and taken out of the Republic of Croatia. The item of goods imports is adjusted for the estimated value of goods imported personally by the Croatian citizens from the neighbouring countries (shopping expenditures).

Transportation, travel and other services are reported separately under service account. Revenues and expenditures on the basis of transportation, in the 1993-1998 period, were adopted from the ITRS. From 1999 on, revenues and expenditures arising from transportation of goods and passengers, as well as the value of accompanying services, which together constitute the total value of these services, are compiled on the basis of the results of the Research on transactions related to international transportation services, carried out by the CNB. Owing to an exceptionally large population of road carriers, revenues and expenditures on the basis of road transportation are not adopted from this research. They are compiled by using ITRS data. As regards transportation of goods, expenditures are sup-

plemented by a portion of transportation and insurance costs related to imports of goods which belongs to non-residents and which is estimated by adjusting the value of imports at c.i.f. parity to the value of imports f.o.b.

Revenues from services rendered to foreign travellers and tourists, as well as expenditures incurred by domestic travellers and tourists abroad are shown under the position Travel. In the 1993-1998 period, this position was assessed by using various data sources which did not provide for a full coverage in accordance with the recommended methodology. Accordingly, in the second half of 1998, the Croatian National Bank started to carry out the Survey on Consumption of Foreign Travellers in Croatia and Domestic Travellers Abroad and use its results for compiling the Travel position. Since early 1999, the results of this Survey, based on carrying out a survey of travellers (stratified sample) at border crossings, have been combined with the Ministry of the Interior data on total number of foreign and domestic travellers, along with the data on distribution of foreign travellers by countries contained in the CBS Report on tourism, in order to assess the corresponding balance of payment items.

Other services position is complied by using different data sources: apart from revenues and expenditures related to insurance and communication services, which have been determined by the CNB special statistical research since 2001, the values of all other services are adopted from the ITRS.

Transactions in the income account are classified into four main groups. Compensation of employees item is compiled on the basis of the ITRS. Income from direct investment, portfolio investment and other investment are reported separately. Data on reinvested earnings are reported separately, under direct investment income, calculated on the basis of the CNB Research on direct and other equity investment. In contrast to data on dividends, these data are not available for the 1993-1996 period, since at that time they were not reported separately. From the first quarter of 2009 on, international standards are applied in the statistical monitoring of reinvested earnings, meaning that reinvested earnings are reported on a quarterly basis, i.e. in the period in which the profit is actually earned. Previously,

^a Preliminary data.

reinvested earnings were reported in the month in which the decision on the distribution of the previous year's profit was adopted, meaning that they were based on the profit earned in the preceding year. On the basis of statistical data on external debt relations, starting from 1997, income from direct investment includes data on interest arising from credit relations between residents and non-residents directly related through ownership. Income from equity portfolio investment is compiled on the basis of the same research, whereas data on debt portfolio investment income have been compiled since 1999, based on statistics on foreign credit relations, which also encompass income related to debt securities owned by non-residents. Income from other investments includes the calculation of interest in accordance with the foreign credit relations statistics. The methodology for compiling the statistics on debt investment income has been changed in 2007 to include the reporting of income on an accrual basis. This basically means that income from debt investment and interest are reported at the point in time when they accrue and not at the point in time when they mature or when they are paid. As a result, the historical data for the 1999-2006 period have been revised.

Current transfers are reported separately for the general government sector and other sectors. The ITRS is used as the main data source on current transfers for both sectors. In addition to taxes and excise duties, pensions, monetary support and donations, which are included in current transfers of both sectors, the government sector also encompasses data on multilateral cooperation, whereas other sectors include data on workers' remittances. Current transfers of the general government sector also include data on exports and imports of goods without a payment obligation, provided by the CBS. In the 1993-1998 period, current transfers of other sectors also encompassed an estimate of unregistered foreign currency remittances, which accounted for 15% of the positive difference between unclassified inflows and outflows of the household sector. From 1993 to the second quarter of 1996, the CNB also assessed a portion of the outflow based on current transfers. From 2002 on, inflows and outflows based on current transfers of other sectors are supplemented by the data of the CNB special statistical research on international transactions related to insurance services.

Capital account is compiled on the basis of the ITRS, particularly on their part related to transfers of migrants. In addition, capital account includes transfers that cannot be classified into current transfers, such as allocation of gold of the former SFRY or investments in patents and rights.

Foreign direct investments include equity capital, reinvested earnings and debt relations between ownership-related residents and non-residents. Direct investments are investments whereby a foreign owner acquires a minimum of 10% interest in equity capital of a company, regardless of whether a resident invests abroad or a nonresident invests in Croatian residents. The CNB Research on foreign direct investments started in 1997 when companies included in the survey also delivered data on direct investments for the 1993-1996 period. For the same period, no data are available on reinvested earnings and other capital under direct investment position, where all debt relations between related residents and non-residents are classified (excluding the banking sector). Such data actually became available only after the stated research has been launched. Since 1999. data on debt relations within direct investments have been collected on the basis of external debt relations statistics. From 2007 on, the CNB Statistics Department conducts the research on the purchase and sale of the real estate by non-residents on the territory of the Republic of Croatia. Persons obliged to submit reports are the public notaries who learn about these transactions in the course of their business. Data on the purchase and sale of the real estate by Croatian residents abroad are compiled on the basis of the ITRS. These purchase and sale transactions are also a constituent part of direct investments.

Data on equity portfolio investments are collected from the same data source as the data on direct investments. Debt portfolio investments include all investments in short-term and long-term debt securities that cannot be classified under direct investments. In the 1997-1998 period, these data were collected through the CNB Research on direct and portfolio investments, and since 1999 data on external debt relations and monetary statistics data for bank investment have

^a As from Bulletin No. 146 the CBRD is reclassified from the subsector central government funds to the subsector non-banking financial institutions. The reclassification covers the entire statistical series (from January 1999 onwards). Moreover, as from the same number of the Bulletin, CM is reclassified from the subsector central government funds to the subsector public enterprises. The reclassification covers the statistical series from January 2080 onwards. ^b Data also include the round tripping which increases direct investment in Croatia and direct investment abroad by the same amount. This type of direct investment was recorded in December 2008 (EUR 825.7m) and August 2009 (EUR 666.5m). ^c Preliminary data.

been used. Starting from 2002 and 2004, this position has also been compiled for investment funds and pension funds, respectively.

Other investment encompasses all other debt investments that have not been mentioned, apart from investment constituting reserve assets. Other investments are classified by instruments, maturity and sectors. Trade credits, in the 1996–2002 period, included the CNB estimates of advance payment and deferred payments, made on the basis of the sample of the largest and large importers and exporters. Data on advance payments have been estimated since 1996, while data on short-term deferred payments (first up to 90 days, then up to 150 days, and today from 8 days to 1 year) have been

collected since 1999. In 2003, this research was replaced by a new one, where the selected companies, regardless of their size (stratified sample), are obliged to submit data. Data on deferred payments with the original maturity of more than one year are adopted from the CNB foreign credit relations statistics. Credits granted by residents to non-residents, i.e. foreign loans utilised by residents and granted by non-residents, which cannot be classified into direct investments or trade credits, are classified by the institutional sector and maturity under the corresponding positions of other investment. The CNB foreign credit relations statistics represent the data source for these positions. Currency and deposit position shows residents' claims on

^a As from Bulletin No. 146 the CBRD is reclassified from the subsector central government funds to the subsector non-banking financial institutions. The reclassification covers the entire statistical series (from January 1999 onwards). Moreover, as from the same number of the Bulletin, CM is reclassified from the subsector central government funds to the subsector public enterprises. The reclassification covers the statistical series from January 2008 onwards. ^b Preliminary data.

^a As from Bulletin No. 146 the CBRD is reclassified from the subsector central government funds to the subsector non-banking financial institutions. The reclassification covers the entire statistical series (from January 1999 onwards). Moreover, as from the same number of the Bulletin, CM is reclassified from the subsector central government funds to the subsector public enterprises. The reclassification covers the statistical series from January 2008 onwards. ^b Preliminary data.

Note: The interest are statistical series in non-visitionary 2000 or manifold in the counter-entry of a part of revenues from travel services which relates to such revenues not stated in the banks' records.

foreign countries for foreign cash and deposits with foreign banks, as well as obligations of the Croatian banks for deposits owned by non-residents. Monetary statistics represent a data source for the general government sector and banks sector. Data on balance and currency structure of foreign assets and liabilities, contained in monetary statistics, are used to assess transactions from which the exchange rate effect was eliminated. In the 1993-1998 period, data on other sectors' claims under this position were compiled on the basis of the CNB estimate of a portion of net foreign currency inflows of the household sector which is not classified under current transfers.

Since 1999, this position has included only the data based on the Bank for International Settlement quarterly data, while data in the fourth quarter of 2001 and in the first two quarters of 2002 relate to the effect of the EMU countries' currencies changeover to the euro.

In the period from 1993 to 1998, the estimate of reserve assets transactions was made by converting the changes in the original currencies into the US dollars by applying the average monthly exchange rate of the currencies contained in the reserves. Since 1999, the changes in reserve assets balance have been calculated on the basis of the CNB accounting data.

a International reserves of the Republic of Croatia consist only of the Croatian National Bank's foreign currency reserves. b Preliminary data.

Table H7: International Reserves and Banks' Foreign Currency Reserves

Data on the international reserves of the Croatian National Bank are compiled in accordance with the methodology set out in the Balance of Payments Manual (International Monetary Fund, 1993), and include those foreign claims of the Croatian National Bank that can be used to bridge imbalances in international payments. International

reserves include special drawing rights, reserve position in the Fund, gold, foreign currency and deposits with foreign banks, as well as bonds and debt instruments.

The foreign currency reserves of banks include foreign currency and deposits of domestic banks with foreign banks. These foreign currency reserves represent an additional source of liquidity for bridging imbalances in international payments.

Table H8: International Reserves and Foreign Currency Liquidity

International reserves and foreign currency liquidity are shown in accordance with a Template on international reserves and foreign currency liquidity, drawn up by the IMF. A detailed explanation of the Template is given in "International Reserves and Foreign Currency Liquidity – Guidelines for a Data Template, 2001".

The first part of the Template shows total assets of the Croatian National Bank in convertible foreign currency. Official reserve assets (I.A.) show those types of assets that are readily available to the CNB at any moment for bridging imbalances in international payments. Official international reserves include: short-term foreign negotiable debt securities, foreign cash, foreign currency sight deposits, foreign currency time deposits which can be withdrawn before maturity, foreign currency time deposits with a remaining maturity of up to 1 year, reserve position with the IMF, special drawing rights, gold, and reverse repos with foreign negotiable debt securities.

The second part of the Template shows fixed predetermined foreign currency net liabilities of the Croatian National Bank and the central government (excluding central government funds) that fall due in the next 12 months. Foreign currency loans, securities and deposits (II.1.) include future interest payments on banks' foreign currency reserve requirements with the CNB (only interest payments for the next month are included), payments of future maturities of foreign currency CNB bills, future principal and interest payments on loans from the IMF, and future principal and interest payments on the central government's foreign currency debts (excluding central government funds). Aggregate short and long positions in forwards and futures in foreign currencies (II.2.) include future collections () or payments (–) arising from currency swaps between the CNB and domestic banks (temporary sale or purchase of foreign currency). Item Other (II.3.) includes future payments arising from repo transactions with foreign negotiable debt securities.

The third part of the Template shows predetermined contingent foreign currency net liabilities of the Croatian National Bank and the central government (excluding central government funds), which fall due in the following 12 months. Contingent liabilities in foreign currency (III.1.) include future principal and interest payments on foreign loans guaranteed by the central government, and banks' foreign currency reserve requirements with the CNB. (The inclusion of reserve requirements in foreign currency is based on the assumption that there will be no changes in ratios or in the base of foreign currency reserve requirements, which comprises foreign currency sources of funds, including ordinary foreign currency accounts, special foreign currency accounts, foreign currency accounts and foreign currency sight deposits, received foreign currency deposits and received foreign currency loans, as well as obligations arising from securities issued in foreign currency (excluding banks' equity securities) and hybrid and subordinated instruments). Undrawn credit lines show potential inflows (+) or outflows (-) which would arise

from drawdowns under these credits.

The fourth part of the Template lists memo items. Short-term, domestic currency debt indexed to foreign currency (IV.(a)) shows obligations arising from the Act on Converting Households' Foreign Currency Deposits into the Public Debt of the Republic of Croatia, which fall due in the next 12 months. Pledged assets (IV.(c)) show time deposits in foreign currency with a maturity over 3 months listed in item I.B. which are also used as collateral. Repo transactions with securities show the value of collateral that is subject to repo and reverse repo transactions with securities as well as how these transactions are registered in the Template.

Table H9: Midpoint Exchange Rates of the Croatian National Bank (period average)

The annual averages of CNB midpoint exchange rates are calculated based on the midpoint exchange rates effective on the working

days in a year, using CNB exchange rate lists whose application dates pertain to the calculation period.

The monthly averages of CNB midpoint exchange rates are calculated based on the midpoint exchange rates effective on the working days in a month, using CNB exchange rate lists whose application dates pertain to the calculation period.

The data show the annual and monthly averages of CNB midpoint exchange rates for selected currencies from 1992 to date, in kuna terms. The averages related to the calculation periods from the beginning of 1992, when the legal tender in the Republic of Croatia was the Croatian dinar, until the introduction of the kuna on 30 May 1994, are shown in kuna equivalent, and are denominated by dividing their values by one thousand (1,000).

The annual and monthly averages of midpoint exchange rates for the euro from 1992 until end 1998 are the averages of midpoint exchange rates applied for the ECU.

Table H10: Midpoint Exchange Rates of the Croatian National Bank (end of period)

Year	Month	HRK/EUR	HRK/ATS	HRK/FRF	HRK/100 ITL	HRK/CHF	HRK/GBP	HRK/USD	HRK/DEM

Table H10: Midpoint Exchange Rates of the Croatian National Bank (end of period)

The table shows CNB midpoint exchange rates applied on the last day of the observed period.

The data show CNB midpoint exchange rates for selected currencies from 1992 to date, in kuna terms. The end of period midpoint

exchange rates related to the periods from the beginning of the time series in 1992 until the introduction of the kuna on 30 May 1994 are shown in kuna equivalent and are denominated by dividing their values by one thousand (1,000).

The midpoint exchange rates for the euro applied on the last days of the observed periods from 1992 until end 1998 are the end of period midpoint exchange rates applied for the ECU.

Table H11: Indices of the Effective Exchange Rate of the Kuna

indices 2005 = 100

V	Month	Nominal effective exchange	Real effective exchange	rate of the kuna; deflator
Year	Wontn	rate of the kuna	Consumer price index	Producer price index
1996	December	92.67	104.56	99.92
1997	December	96.27	106.16	102.55

	February	96.58	90.93ª	91.38ª
	March	96.17		

^a Preliminary data.

Table H11: Indices of the Effective Exchange Rate of the Kuna

The index of the nominal effective exchange rate of the kuna is a weighted geometric average of the index of bilateral nominal exchange rates of the kuna versus the euro, US dollar, Swiss franc and pound sterling. The basic CNB methodology for the calculation of both the nominal and real effective exchange rates of the kuna is described in Box 2 in the CNB Bulletin No. 64 (October 2001) and was first modified in 2004 (see the CNB Bulletin No. 94, June 2004). Starting with the CNB Bulletin No. 157 (March 2010), the presented time series of indices of the effective exchange rates of the kuna have been calculated based on the weights reflecting the structure of the current account (ITRS data) in the period from January 2006 to December 2009. The euro was assigned a 77.6% weight, the US dollar a 20.6% weight, the pound sterling a 0.9% weight and the Swiss franc a weight of 0.8%. The time series of basic indices were recalculated on the basis of 2005.

The index of the nominal effective exchange rate is an aggregate

indicator of the average value of the domestic currency against a basket of currencies. An increase in the index of the nominal effective exchange rate of the kuna in a certain period indicates that the kuna has depreciated against the basket of currencies and vice versa. The index of the real effective exchange rate is a weighted geometric average of the index of bilateral exchange rates of the kuna adjusted for the corresponding indices of relative prices (the ratio of price indices in partner countries and domestic prices). Producer price indices, consumer price indices and the total harmonised consumer price index for the eurozone countries are used as deflators. The time series for consumer prices in Croatia is constructed in the following manner: retail price indices are used for the period until and including December 1997 and consumer price indices for the period as of January 1998. Data for the last two months are preliminary. The historical data may be corrected for the subsequent changes in the data published by the statistical offices of the countries whose prices are included in the calculation of the index of the real effective exchange rate of the kuna.

^a The relevant comparable data as at 31 December 2007, published in Bulletin No. 146, should be used for the calculation of the external debt growth rate in 2008. ^b From January 2008 on, the data of non-financial enterprises are estimated on the basis of the data collected from the sample. ^c From January 2009 on, the data of non-banking financial institutions and non-financial enterprises are processed with the help of the new reporting system (INOK) which uses market interest rates to calculate the balance and the schedule of interest payments. The comparable balance as at 31 December 2008 has been calculated by applying the same methodology.

Table H12: Gross External Debt by Domestic Sectors

External debt is defined as the external debt liabilities of residents on the basis of debt securities issued in the foreign markets (at face value), credits (repo agreements included) regardless of their contractual maturity, deposits of non-residents, and trade credits granted by non-residents with contractual maturity of more than 180 days (90 days up to 11 July 2001 and 150 days up to 31 December 2002).

External debt by domestic sectors is shown in the same manner as in the Capital and Financial Account of the BOP. Item Government shows the external debt of the general government, comprising the Republic of Croatia, central government funds (including the State Agency for Deposit Insurance and Bank Rehabilitation, the Croatian Roads and, until 31 December 2007, the Croatian Motorways; from this date on, the Croatian Motorways is shown within the subsector public enterprises under item Other sectors), and local government. Item Croatian National Bank shows the debt of the central bank. Item Banks shows the debt of banks. Item Other sectors shows the debt of other banking institutions, non-banking financial institutions (including the Croatian Bank for Reconstruction and Development), enterprises, non-profit institutions and households, including craftsmen. Item Direct investment shows borrower - lender transactions of other sectors that are interrelated by ownership (borrower or lender owns more than 10% of the other).

Each sector data are further shown by contractual (short-term or long-term) maturity and by debt instrument. From the beginning of 2004, instruments included in item Currency and deposits (3. Banks) are reported in accordance with their maturity. Data for the previous periods are reported only on a long-term basis.

Outstanding gross external debt includes principal and interest arrears, as well as accrued interest and future principal payments.

Outstanding debt data are shown at the CNB's midpoint exchage rate at the end of the period.

Data are considered preliminary until after publication of the final BOP data for the reporting quarter.

Table H13: Public Sector Gross External Debt, and Publicly Guaranteed and Non-Publicly Guaranteed Private Sector Gross External Debt

The gross external debt position presented in this Table highlights the role of the public sector.

Public sector includes the general government (comprising the Republic of Croatia, central government funds and local government), the central bank, public enterprises, mixed enterprises and the CBRD. Public enterprises are defined as enterprises in 100% ownership of business entities from the public sector. Mixed enterprises are defined as enterprises in which business entities from the public sector have a share larger than 50%.

Publicly guaranteed private sector gross external debt is defined as the external debt liabilities of business entities not covered by the definition of the public sector, the servicing of which is guaranteed by a business entity from the public sector.

Non-publicly guaranteed private sector gross external debt is defined as the external debt liabilities of business entities not covered by the definition of the public sector, the servicing of which is not guaranteed by the public sector.

Items are valued in the same manner as in Table H12.

^a The relevant comparable data as at 31 December 2007, published in Bulletin No. 146, should be used for the calculation of the external debt growth rate in 2008. ^b From January 2008 on, the data of non-financial enterprises are estimated on the basis of the data collected from the sample. ^c From January 2009 on, the data of non-banking financial institutions and non-financial enterprises are processed with the help of the new reporting system (INOK) which uses market interest rates to calculate the balance and the schedule of interest payments. The comparable balance as at 31 December 2008 has been calculated by applying the same methodology.

^a As from Bulletin No. 146 the CBRD is reclassified from the subsector central government funds to the subsector non-banking financial institutions. The reclassification covers the entire statistical series (from December 1998 onwards). Moreover, as from the same number of the Bulletin, CM is reclassified from the subsector central government funds to the subsector public enterprises. The reclassification covers the statistical series from January 2008 onwards.

Table H14: Gross External Debt by Domestic Sectors and Projected Future Payments

The Table shows outstanding gross external debt, projected principal payments and estimated interest payments according to the CNB's midpoint exchange rate at the end of the period. Principal payments on Currency and deposits of non-residents are projected according to the available monetary statistics data on original and remaining maturity.

Estimated interest payments do not include interest on deposits from non-residents, repo transactions and hybrid and subordinated instruments, as well as late interest on these instruments. Future interest payments are estimated on the basis of contractual interest rates and do not reflect changes of variable interest rates.

Projected payments of accrued interest, which are an integral part of the gross external debt, increase the projected principal payments in the first quarter period and, consequently, decrease the interest payments estimated for the same period.

Table H15: Gross External Debt by Other Sectors^a

^a The relevant comparable data as at 31 December 2007, published in Bulletin No. 146, should be used for the calculation of the external debt growth rate in 2008. ^b From January 2008 on, the data of non-financial enterprises are estimated on the basis of the data collected from the sample. ^c From January 2009 on, the data of non-banking financial institutions and non-financial enterprises are processed with the help of the new reporting system (INOK) which uses market interest rates to calculate the balance and the schedule of interest payments. The comparable balance as at 31 December 2008 has been calculated by applying the same methodology.

^a As from Bulletin No. 146 the CBRD is reclassified from the subsector central government funds to the subsector non-banking financial institutions. The reclassification covers the entire statistical series (from December 1998 onwards). Moreover, as from the same number of the Bulletin, CM is reclassified from the subsector central government funds to the subsector public enterprises. The reclassification covers the statistical series from January 2008 onwards. ^b Data also include the round tripping which increases direct investment in Croatia and direct investment abroad by the same amount. This type of direct investment was recorded in December 2008 (EUR 825.7m) and August 2009 (EUR 666.5m). Accordingly, they impact the stock of direct investment in Croatia and direct investment abroad from these months onwards. ^c Preliminary data.

Table H16: International Investment Position

This table is made in accordance with the recommendations of the IMF (Balance of Payments Manual, Fifth Edition, 1993). Data sources include: reports from banks, enterprises, the Croatian National Bank, and the Zagreb Stock Exchange (ZSE).

Data on international investments of the Republic of Croatia and international investments into the Republic of Croatia are recorded in euros (EUR) and US dollars (USD). Depending on the sources of data available, the conversion of values from the original currencies into the reporting currencies is performed:

- by applying the current rate of exchange or the average monthly midpoint exchange rate of the Croatian National Bank to transactions;
- by applying the midpoint exchange rate of the Croatian National Bank on the reporting date to balances.

The source of data on foreign direct and portfolio equity investment is the statistical research of the Croatian National Bank. The equity investments have been monitored since the beginning of 2001 and are corrected for changes in the official index of the Zagreb Stock Exchange (CROBEX).

Portfolio debt investment and other investment are classified according to the following institutional sectors: the Croatian National Bank, government, banks and other sectors. The government sector comprises the central government and funds and local government authorities. The banking sector comprises banks.

Item Portfolio debt investment – Assets and liabilities comprises data on investments of residents into debt securities issued by non-

residents (assets) and investments of non-residents into debt securities issued by residents (liabilities). The source of data is the register of foreign credit relations kept by the Croatian National Bank, which also comprises claims and liabilities arising from bonds and money market instruments.

Item Other investment – Trade credits – Assets and liabilities comprises foreign claims and foreign liabilities of the said sectors arising from trade credits. The source of data is the register of foreign credit relations kept by the Croatian National Bank.

Item Other investment – Loans – Assets and liabilities comprises data on loans granted and received between residents and non-residents classified according to institutional sectors. The source of data is the register of foreign credit relations kept by the Croatian National Bank.

Item Other investment – Currency and deposits – Assets shows the total liquid foreign currency assets of banks authorised to do business abroad reduced by the amount of foreign currency deposited by banks with the CNB in fulfilment of a part of their reserve requirements. In addition to banks' foreign claims, foreign claims of the government sector are also shown. The sources of data are reports from the government and banks.

Item Other investment – Currency and deposits – Liabilities shows the total foreign currency and kuna liabilities of the said sectors abroad arising from current accounts, time and notice deposits, sight deposits and demand deposits. The sources of data for this item are reports from banks.

Item International reserves of the CNB is compiled on the basis of the CNB Accounting Department reports which contain data on their balances and changes.

^a As from Bulletin No. 146 the CBRD is reclassified from the subsector central government funds to the subsector non-banking financial institutions. The reclassification covers the entire statistical series (from December 1998 onwards). Moreover, as from the same number of the Bulletin, CM is reclassified from the subsector central government funds to the subsector public enterprises. The reclassification covers the statistical series from January 2008 onwards. ^b Preliminary data..

^a As from Bulletin No. 146 the CBRD is reclassified from the subsector central government funds to the subsector non-banking financial institutions and CM is reclassified from the subsector central government funds to the subsector public enterprises. The debt of the CBRD, present in this table under headings 2. External debt of central government and 1. Domestic debt of central government, is reclassified from December 1998 and June 1999 onwards respectively, and the debt of CM is reclassified from January 2008 onwards.

Table I3: Central Government Debt

As from Bulletin No. 154 the table contains the revised data.

The central government debt comprises the domestic and exter-

The central government debt comprises the domestic and external debt.

The domestic debt of the central government is compiled from the MoF data on T-bills and bonds and the CNB data on money market instruments, credits from banks and credits from the CNB.

The stock of T-bills includes MoF T-bills denominated in kuna, eurobills and T-bills indexed to the euro with a maturity of up to one year. The stock of eurobills includes accrued interest. The difference between the nominal value and the issue value of T-bills denominated in kuna and of T-bills indexed to the euro is the accrued interest which is distributed over the life of instruments using the simple interest calculation method (i.e. in a linear manner) and the method of calculating the number of days where the actual number of days is divided by 360.

The stock of bonds includes central government bonds issued in the domestic market, MoF T-bills with a maturity of over one year and a share of total central government bonds issued in the foreign market which is held by resident institutional units at the end of the reporting period. The difference between the nominal value and the issue value of T-bills with a maturity of over one year is the accrued interest which is distributed over the life of instruments using the compound interest calculation method. The stock of central government bonds includes accrued interest.

From January 2004 onwards, the stock of credits from banks includes both outstanding principal and accrued interest.

The external debt statistics compiled by the CNB is the source of data on the central government external debt.

The supplement contains the data on the central government guaranteed debt. Bank statistical reports are the source of data on domestic debt guarantees, while the external debt statistics compiled by the CNB is the source of data on external debt guarantees.

Irrespective of the notes under the heading "Classification and Presentation of Data on Claims and Liabilities", the debt of the Croatian Roads, the Croatian Motorways and the State Agency for Deposit Insurance and Bank Rehabilitation, presented in this table under headings 2. External debt of central government and 1. Domestic debt of central government, has been reclassified from the subsector Republic of Croatia to the subsector central government funds from December 1998 and December 2002 onwards respectively.

^a Data from January 1992 to December 1997 relate to the retail price index. ^b Data have been revised from January 2005 onwards due to changes in the methodology used by the CBS. ^c Data from January 1992 to December 1998 relate to the retail price index. Source: CBS.

Table J1: Consumer Price and Producer Price Indices

The Central Bureau of Statistics (CBS) introduced the consumer price index (CPI) in early 2004. This indicator of price movements was compiled in accordance with the methodological principles laid down by the ILO and Eurostat. In its First Release, issued on 17 February 2004, the CBS published the data on movements in the CPI in January 2004 and the time series for the CPI as of January 2001. The CBS subsequently constructed the time series for the con-

sumer price index encompassing the period from January 1998 to December 2000. As expected following the introduction of the new index, the CBS ceased to publish the retail price index (RPI) and the cost of living index, whose calculation methodologies have not been adequately harmonised with internationally accepted standards. The main features of the CPI are described in the CNB Bulletin No. 91 (see Box 1). The data on the average year-on-year consumer price inflation rate are shown in the Bulletin table on Economic Indicators.

^a Since January 2007, the CPI has been calculated and published by the CBS on the new base 2005 = 100. Source: CBS.

Table J2: Core Consumer Price Indices

The core consumer price index is calculated by the Central Bureau of Statistics (CBS) in the manner that agricultural products prices and administrative prices (which among others include the prices of electricity and refined petroleum products) are excluded

from the basket of goods and services used in the calculation of the total index. These two groups of products accounted for a total of 30.06% in the basket in 2005 (agricultural products 6.93 percentage points, and administrative products 23.13 percentage points). A total of 111 goods and services are excluded from the coverage of the CPI basket and assigned a zero weight.

Table J4: Consumer Confidence Index, Consumer Expectations Index and Consumer Sentiment Index

The CNB Consumer Confidence Survey has been carried out regularly since April 1999 in accordance with the methodology of the European Commission, the Joint Harmonised EU Programme of Business and Consumer Surveys. Until April 2005, the CNB conducted the survey once a quarter (in January, April, July and October). As of May 2005, the CNB carries out the survey in monthly frequency in cooperation with the European Commission, using its technical and financial assistance. The Croatian National Bank bears sole responsibility for the creation and conduct of the survey.

The questionnaire contains 23 questions, examining consumer perception of the changes as regards every-day economic issues. The value of the response index is determined in line with the set methodology, based on the responses to the questions from the Consumer Confidence Survey. The movements of three composite indices, consumer confidence index (CCI), consumer sentiment index (CSI) and consumer expectations index (CEI), are calculated and monitored based on the value of the response indices. Each of the said composite indices is calculated as the arithmetic average of the response indices (I), i.e. as the average of previously quantified responses to individual questions from the survey:

$$I_i = \sum_{i=1}^{k} r_i \cdot w_i$$

where: r is the value of the response, w is the share of respondents opting for a particular response (weight), i question from the ques-

tionnaire, z is the offered/chosen response, k is the number of offered responses to a particular question.

The value of the said indices ranges $-100 < I_i < 100$. Higher index values than those recorded over the previous period point to an increase in expectations (optimism) as regards the specific segment covered by the particular question.

The table shows the values of chosen response indices for the following questions:

I1: How has the financial situation of your household changed over the last 12 months?

I2: How do you expect the financial position of your household to change over the next 12 months?

13: How do you think the general economic situation in Croatia has changed over the past 12 months?

14: How do you expect the general economic situation in Croatia to develop over the next 12 months?

17: How do you expect the number of people unemployed in Croatia to change over the next 12 months?

18: In view of the general economic situation, do you think now is the right moment for people to make major purchases such as furniture, electrical/electronic devices, etc.?

I11: Over the next 12 months, how likely is it that you will save any money?

The components of composite indices are as follows:

CCI: I2, I4, $I7 \times (-1)$, I11

CEI: I2, I4

CSI: I1, I3, I8.

List of Banks and Savings Banks

1 April 2010

Authorised banks

- 1. Banco Popolare Croatia d.d., Zagreb
- 2. Banka Brod d.d., Slavonski Brod
- 3. Banka Kovanica d.d., Varaždin
- 4. Banka splitsko-dalmatinska d.d., Split
- 5. BKS Bank d.d., Rijeka
- 6. Centar banka d.d., Zagreb
- 7. Credo banka d.d., Split
- 8. Croatia banka d.d., Zagreb
- 9. Erste & Steiermärkische Bank d.d., Rijeka
- 10. Hrvatska poštanska banka d.d., Zagreb
- 11. Hypo Alpe-Adria-Bank d.d., Zagreb
- 12. Imex banka d.d., Split
- 13. Istarska kreditna banka Umag d.d., Umag
- 14. Jadranska banka d.d., Šibenik
- 15. Karlovačka banka d.d., Karlovac
- 16. Kreditna banka Zagreb d.d., Zagreb
- 17. Međimurska banka d.d., Čakovec
- 18. Nava banka d.d., Zagreb
- 19. OTP banka Hrvatska d.d., Zadar
- 20. Partner banka d.d., Zagreb
- 21. Podravska banka d.d., Koprivnica
- 22. Primorska banka d.d, Rijeka
- 23. Privredna banka Zagreb d.d., Zagreb
- 24. Raiffeisenbank Austria d.d., Zagreb
- 25. Samoborska banka d.d., Samobor
- 26. Slatinska banka d.d., Slatina
- 27. Société Générale Splitska banka d.d., Split
- 28. Štedbanka d.d., Zagreb
- 29. Vaba d.d. banka Varaždin, Varaždin
- 30. Veneto banka d.d., Zagreb
- 31. Volksbank d.d., Zagreb
- 32. Zagrebačka banka d.d., Zagreb

Authorised savings banks

- 1. Obrtnička štedna banka d.d., Zagreb
- 2. A štedna banka malog poduzetništva d.d., Zagreb

Authorised housing savings banks

- 1. HPB Stambena štedionica d.d., Zagreb
- 2. PBZ stambena štedionica d.d., Zagreb
- 3. Prva stambena štedionica d.d., Zagreb
- 4. Raiffeisen stambena štedionica d.d., Zagreb
- 5. Wüstenrot stambena štedionica d.d., Zagreb

Other institutions

 Hrvatska banka za obnovu i razvitak, Zagreb, operates in accordance with the Act on the Croatian Bank for Reconstruction and Development (OG 138/2006)

Representative offices of foreign banks

- 1. BKS Bank AG, Zagreb
- 2. Commerzbank Aktiengesellschaft, Zagreb
- 3. Deutsche Bank AG, Zagreb
- 4. LHB Internationale Handelsbank AG, Zagreb
- 5. Union de Banques Arabes et Françaises UBAF, Zagreb

Banks and savings banks undergoing bankruptcy proceedings

Name of bank/savings bank	Date of bankruptcy proceedings opening
1. Agroobrtnička banka d.d., Zagreb	14/6/2000
