^a Calculated by applying the average annual exchange rate (HRK/1 EUR) to the GDP in kuna terms.

b Inflation rate was measured by the RPI in the 1994-1998 period. From 1999 on, it is measured by the CPI.

^c Preliminary data

d External debt indicators for the period 1998-2004 are shown on a gross basis, while the indicators for the period up to 1997 do not include interest arrears and accrual interest, hybrid and subordinated instruments, repo transactions of banks and the CNB, deposits of international financial institutions with the CNB, and one-sided effects of the secondary bond market.

e Includes principal payments on long-term debt net of principal payments on trade credits and direct investments, as well as total interest payments net of interest payments on direct investments.

f On a cash basis.

⁹ Employment and unemployment rates as at November 1996 and as at June 1997. The 2004 data are for the first half of the year. Sources: CBS, MoF and CNB.

Information on Economic Trends

Real Sector

The available monthly indicators of economic activity corroborate mainly positive developments in the real sector during the last quarter of 2005, except in retail trade which continued to slowdown in this period.

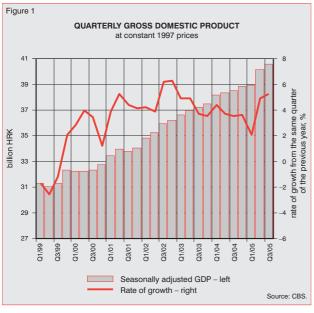

According to the seasonally adjusted data, the total volume of industrial production grew at an accelerated pace in November and December, after the stagnancy in industrial production over the third quarter. Due to a rise in the level of industrial production its annual growth rate reached 6.9% in December 2005, adjusted for seasonality and working days (December had two working days less than the same month in 2004). As a result, industrial production growth for the whole 2005 accelerated to 5.1%.

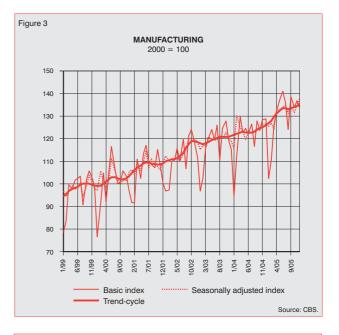

Pronounced growth of industrial production over the fourth quarter (6.2% year-on-year, seasonally adjusted) was driven mainly by the strengthening of domestic demand for

investment goods. This is also suggested by a large contribution of the annual growth in the manufacture of intermediate and capital goods to overall industrial production growth paralleled with an increase in capital goods imports. A strong acceleration in construction activity at end-2005 also corroborates the importance of investment activity for industrial production growth. In addition to this, the fourth quarter saw a boost in capital goods exports year-on-year, while intermediate goods exports slowed down mildly.

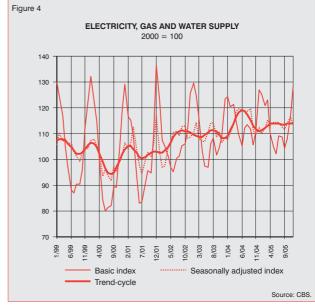

The available indicators for October and November suggest a decline in inventories in industry. The largest contribution to the overall growth of inventories was made by the accumulation of consumer goods inventories which was paralleled with a slowdown in retail trade, being an indication of weakening domestic demand for consumer goods. This is also supported by the data on reduced imports of durable and non-durable consumer goods.

The described developments in industry over the observed period primarily arose from the accelerated growth of

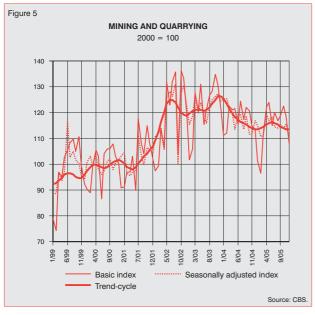

manufacturing which recorded an 8.8% increase year-on-year in December 2005. As a result, the annual growth in manufacturing reached 6.5% in 2005, in seasonally adjusted terms. The largest positive contributions to the December growth in manufacturing were made by the manufacture of machinery and equipment (n.e.c.) and manufacture of food products and beverages. On the other hand, the largest negative contributor to the movements in manufacturing was the manufacture of chemicals and chemical products. The contributions of all the above mentioned divisions to the growth of manufacturing considerably exceeded their respective shares in this section.

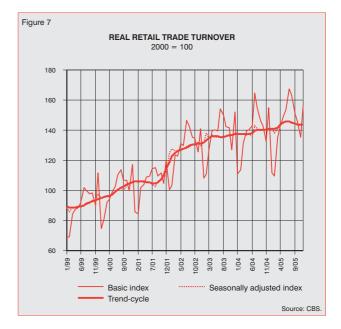

The annual fall in energy supply during the second and third quarters, caused by the base period effects (i.e. this industry's high level of production in mid-2004), was followed by its increase of 3.4% year-on-year in the fourth quarter. At the same time, the end of the year saw a downward trend in energy imports in nominal terms, owing to reduced oil prices. However, their growth rate remained very high in

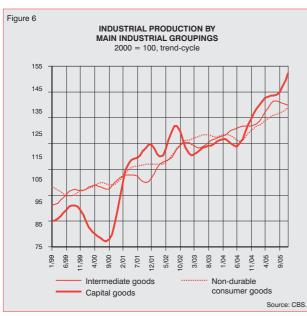

2005, 40.1%.

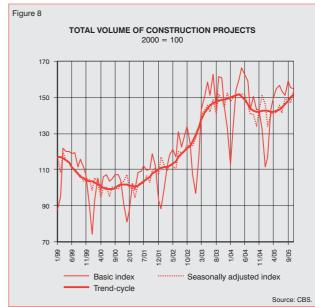

After its temporary growth in October and November, mining and quarrying declined again at the annual level in December, so that its cumulative rate of change remained negative, -0.1% year-on-year, in the fourth quarter. In contrast to this, the available data for the period up to November point to acceleration of construction growth, and leading indicators suggest a continuation of this trend. Domestic production in mining and quarrying for construction purposes may have been substituted by stronger imports of goods from abroad, as the imports of mining and quarrying products accelerated strongly in the fourth quarter.

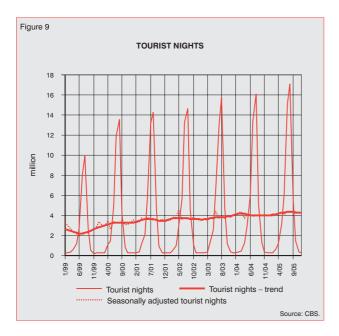

According to the seasonally adjusted data, a decline in retail trade turnover has been recorded since the middle of the third quarter. Its mild recovery in December did not stop the slowdown in the annual growth dynamics of retail trade turnover, which accompanied the decline in the retail trade level. Following its high annual growth rate of 6.0% achieved in the second quarter, the annual growth rate of retail trade

slowed to 2.7% and 2.1% in the third and fourth quarters respectively, according to the seasonally adjusted data. The largest contributions to the nominal growth of retail trade were made by the sale of motor vehicles and the sale of motor fuels and lubricants (due to a rise in the prices of these products at the annual level). These divisions' contributions to the retail trade growth exceeded significantly their shares in the overall trade turnover.

Seasonally adjusted data suggest a recovery of construction activity in November, mainly due to the growth in the construction of buildings. However, the year-on-year growth of construction activity declined mildly compared with October, but it remained high (7.9%). As a result, the annual growth rate achieved in the fourth quarter (October and November) went up to 8.7% compared with the rate of 2.5% recorded in the third quarter. The latest available CBS data on building permits issued in November and the value of net construction project orders in October give rise to expectations that the positive tendencies in construction will continue by the end of 2005 and in early 2006.

Despite the usually low level of tourist overnight stays and tourist arrivals in December, they went up 5.1% and 4.1% respectively in December compared with the same month in 2004. The cumulative growth rates in tourism point to stronger tourism performance in 2005 compared with that in the previous year. Thus, the cumulative growth rate of tourist overnight stays was 7.6% in 2005 (2.5% in 2004). The number of tourist arrivals went up 6.2% in 2005.

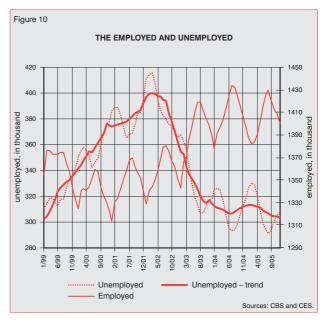

Employment and Wages

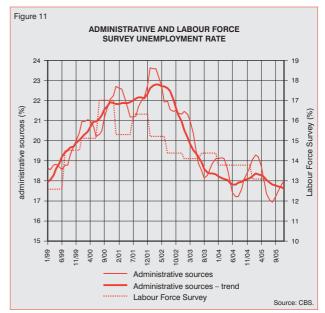

Despite the December growth in registered unemployment of 2,318 (0.8%), which marked the season, its trend continued to be on the downturn as in the previous months. In December, the downward trend in registered unemployment was generated by an increase in outflows from the CES register, resulting from new employment and clearings from the records for reasons other than employment, and stagna-

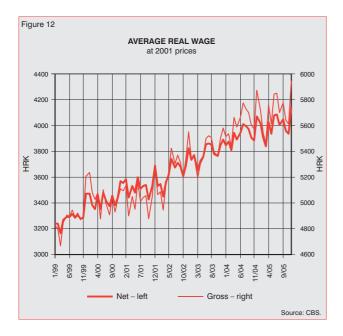

tion in the number of the newly registered with the CES. As the downward trend in registered unemployment was present throughout the entire 2005, the level of registered unemployment fell to 308,000 at end-2005, which was 10,000 or 3% less than at end-2004.

According to the CBS preliminary data, total employment growth accelerated slightly at the end of the year compared with that in the second and third quarters. Total employment stood at about 1,400,000 in December 2005, up 3,000 or 0.2% over the end of 2004. The revision of these data in April 2006 may show that the annual employment growth rate in December 2005 corresponds with the rate of increase in the number of the insured with the CPIA that stood at 2.6% year-on-year at end-December. Labour market developments in 2005 resulted in the reduction of the registered unemployment rate. The registered unemployment rate stood at 18.0% at end-2005, down 0.5 percentage points over the end of 2004.

Real wages, following their decline in October and No-

vember, grew in December 2005. The average real gross wage paid in December grew by 1.3% year-on-year, up 0.4 percentage points over the year-on-year growth in wages in the fourth quarter and up 0.1 percentage point over the average for the year as a whole (1.2%). The registered growth in real gross wages in 2005 was 3 percentage points slower than in 2004. The slowdown in the growth of real net wages was less pronounced due to the impact of tax reform introduced early in 2005.

Prices

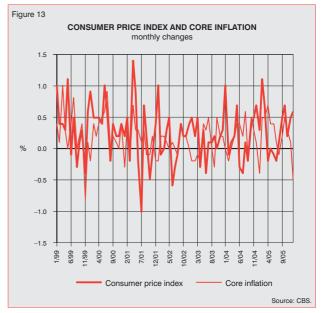

The overall CPI rose by 0.6% in January 2006 from December 2005, mostly due to a seasonal increase in vegetable prices, up by a significant 14.9% from the previous month and the increase in some administrative prices (water supply, sanitation and refined petroleum products prices grew by 9.3%, 4.5% and 2.1% respectively from December). In addition, with the Rulebook on the Disposal of Packaging coming into effect in January, some producers transferred the additional expenses arising from its implementation on consumers, which lead to an increase in beverage and milk prices. The contribution of the said price increases to the overall monthly CPI rate was only

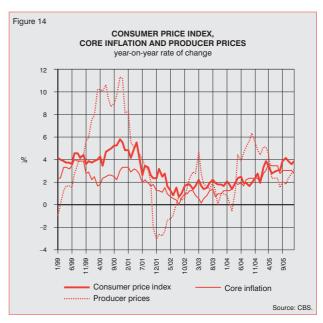

Consumer Price Index, year-on-year rate of change

| | Weight | 11/2005 | 12/2005 | 1/2006 |
|---|--------|---------|---------|--------|
| Total | 100.0 | 3.8 | 3.6 | 3.9 |

| Goods | 76.9 | 3.8 | 3.5 | 3.6 |
| Services | 23.1 | 3.8 | 4.1 | 5.2 |

partly offset by clothing and footwear prices falling on average by a substantial 8.2% compared with the previous month. Having slowed down to 3.6% in December 2005, the year-on-year consumer price inflation rate reached 3.9% in January 2006, a rise of 0.3 percentage points. This was due to the base period, i.e. the slower price growth in January 2005. The core CPI, which excludes vegetable prices and administrative prices (which had the strongest growth in January) dropped by 0.5% in January from the previous month, while the year-on-year core inflation rate declined from 3.0% in December 2005 to 2.8% in January 2006.

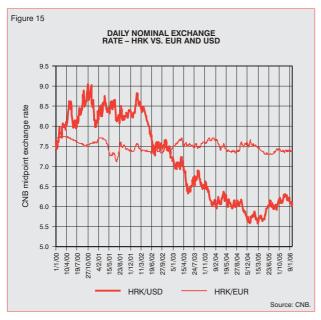

Boosted by rising energy and capital goods prices, the index of producer prices drifted upwards by 0.5% in January from the previous month. Having risen over the previous three months, the year-on-year producer price inflation rate reached 3.2% in January (a rise of 1.4 percentage points compared with October 2005), with the largest contribution to the rise coming from the growth of the year-on-year rate of change of energy and capital goods prices.

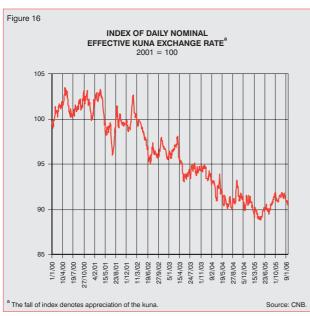

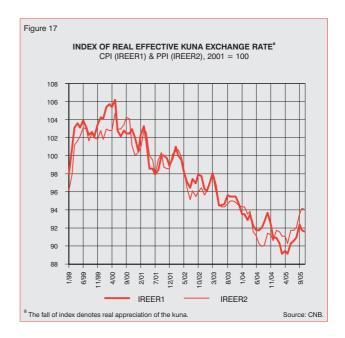

Exchange Rate

January saw stable movements of the kuna/euro exchange rate. The kuna exchange rate strengthened only 0.2%, rising from HRK 7.38/EUR on 31 December 2005 to HRK 7.36/EUR on 31 January 2006. The end-January exchange rate was 2.5% stronger than at the same time in 2005. Slightly more pronounced in late January, this appreciation was partly due to kuna demand growing on account of a new government bond issue announced for February and partly because of appreciation expectations related to foreign capital inflows, generated by the alleged foreign investors' interest in Croatian government bonds. With appreciation pressures on the exchange rate being generally low in January, there was no need for the central bank to intervene in the foreign exchange market. The CNB made no foreign exchange sales to the government in January, its liabilities towards the Paris and London Clubs having been settled by

funds received under the World Bank PAL.

The index of the daily nominal effective exchange rate of the kuna appreciated by 0.8% over January. In addition to the kuna/euro exchange rate, the index was strongly influenced by the kuna appreciating by 2.3% against the US dollar, with the dollar down from HRK 6.23/USD on 31 December 2005 to HRK 6.09/USD on 31 January 2006. Another slight influence was that of the 0.2% appreciation of the kuna exchange rate against the Swiss franc and the Slovene tolar, while the kuna exchange rate against the pound sterling was the same at end-January 2006 as at end-December 2005.

The index of the real effective exchange rate of the kuna appreciated in November from October, by 0.2% (deflated by producer prices) and by 0.1% (deflated by consumer prices). This was due to domestic prices rising at a somewhat faster rate than prices abroad.

Monetary Developments

Rapid growth of bank placements to the non-banking sector was again recorded in December 2005.

Following accelerated growth of money (M1) in October, and its additional upsurge in December, the annual growth rate of M1 rose from 9.6% in October to 12.3% in December, reaching HRK 38.8bn in that month. The annual growth rate of money in December 2004 was 2.0%.

The largest contribution to this increase in money was provided by an increase in demand deposits (HRK 1.2bn). December saw a particularly rapid growth of demand deposits of the corporate sector (HRK 0.9bn) which coincided with accelerated bank placements to that sector. At the end of the year, total demand deposits stood at HRK 26.7bn, growing annually by 12.9%. Their annual growth rate in December 2004 was 1.2%. The growth of currency was also noticeable in 2005; its annual growth rate of 3.6% in 2004 rose to 11.0% in 2005. Seasonal increase in December included (HRK 0.4bn), currency in circulation stood at HRK

12.2bn at the end of 2005.

The year 2005 was marked by a steady growth in kuna deposits. With their annual growth rate in December standing at 24.5% (compared with 22.4% in 2004), kuna deposits reached almost HRK 28.0bn at the end of 2005. As in December previous year, developments in kuna deposits in the last month of 2005 were determined by dividend payments to HT - Hrvatske telekomunikacije shareholders as corporate kuna time deposits declined by HRK 1.4bn in December and stood at HRK 7.9bn at end-December 2005, a fall of 5.9% compared with December previous year. In 2005 there were no changes as regards the intensity of growth of household kuna time and savings deposits. Their annual growth rate stood at 35.9% at end-December, almost equal to that in 2004 (35.7%)

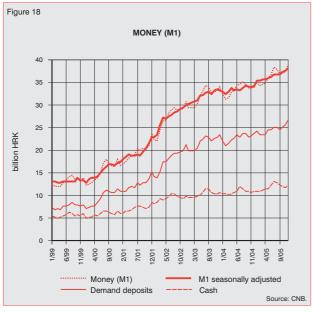

Foreign currency deposits with banks grew at only a slightly slower rate compared with the previous year. The exchange rate effects excluded, the annual growth rate of foreign currency deposits stood at 8.2% in December, com-

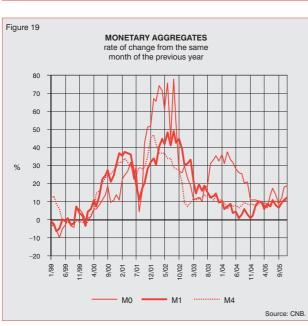

pared with 8.5% in 2004.

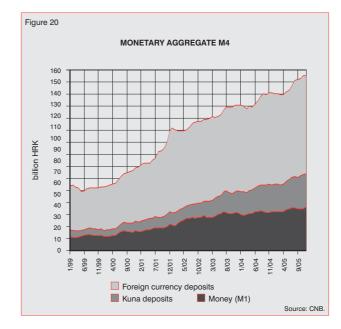

The growth of foreign currency deposits in 2005, in nominal terms, was due to the growth in household foreign currency deposits, whose annual growth rate in December stood at 6.1%, while corporate foreign currency deposits fell by 1.8%, compared with December 2004. Following a decline of HRK 0.6bn in December, total foreign currency deposits stood at HRK 86.8bn at the end of 2005, of which HRK 73.0bn went to household foreign currency deposits.

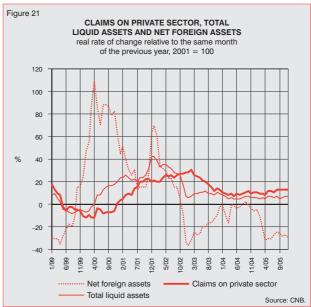

Total liquid assets (M4) held steady in December compared to November, but their December growth rate, due to the effects of the base period, accelerated from 8.5% in 2004 to 10.5% in 2005. M4 reached HRK 154.6bn at end-2005.

The growth of bank placements to the non-banking sector accelerated in the observed period, compared with the previous year. Their annual growth rate was 17.2% at end-December 2005 (19.9% if the exchange rate effects are excluded), an increase over the previous year's 14.0% (14.2% if the exchange rate effects are excluded). Place-

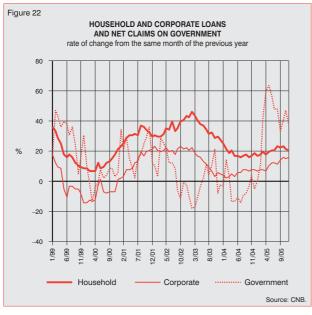

ments to the corporate sector grew faster; their annual growth rate was up from 9.0% in 2004 to 14.3% in 2005. With their December increase of HRK 2.9bn, total bank placements to the non-banking sector reached almost HRK 149.2bn at the end of 2005. Of that amount, HRK 78.6bn went to household loans which grew by 20.3% in 2005.

The relations between the government and the banks intensified in December. The government used the funds raised through a December issue of kuna bonds (RH 2015, nominal value HRK 3.5bn) to cut significantly its liabilities towards the banks (their largest share being attributable to the disbursement of a due DAB bond of HRK 1.7bn and HRK 1.3bn worth of bank loan repayments). The usual fall in government deposits with the CNB towards the end of the year (HRK 0.6bn) was accompanied by an increase in its deposits with the banks (HRK 0.3bn). The developments in bank placements to the central government and the latter's deposits in December led to a decline in bank's net placements to the central government of HRK 1.2bn which stood

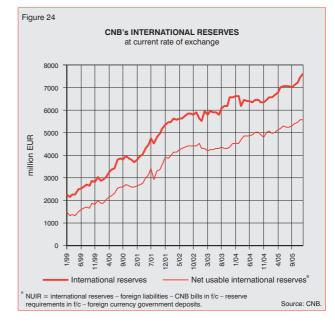

at HRK 19.3bn at end-2005.

Foreign liabilities of banks rose by net HRK 2.0bn in December, owing to a combined impact of significant borrowing of three banks. At the same time, as a result of a decline in foreign assets of banks of HRK 1.8bn in December, net foreign assets of banks fell to HRK –31.5bn at the end of 2005.

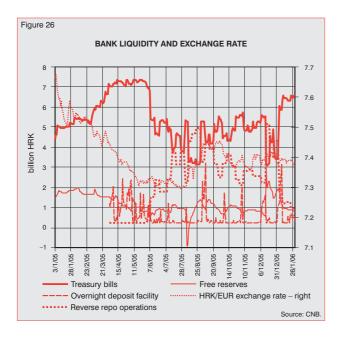

The period of good kuna liquidity from the previous period continued into January 2006. The banks entered the new calendar year with substantial surplus liquidity (over HRK 3.0bn), which gained additional momentum with the application of the decision to reduce the reserve requirement rate from 18% to 17%, which liberated additional funds. As a result, in the new maintenance period, the central bank rejected up to 50% of the bids submitted at regular repo auctions, withdrawing in this way a part of the surplus liquidity. Given good stability of the exchange rate of the kuna, the CNB was not prompted to intervene in the foreign exchange market.

The average amount of bids received at four reverse repo auctions in January was HRK 1.1bn, while the turnover generated at these auctions was the lowest since the beginning of a more intense use of open market operations in June 2005. The marginal repo rate of 3.5% was not changed. Immediately before the reserve requirement allocation, on 11 January, the banks resorted to overnight deposit facility with the CNB for their surplus funds, involving amounts up to HRK 3.0bn. Extremely good liquidity of banks was also seen in stable and low interest rates on the money market (2.13%) and increased subscriptions of T-bills of the Ministry of Finance.

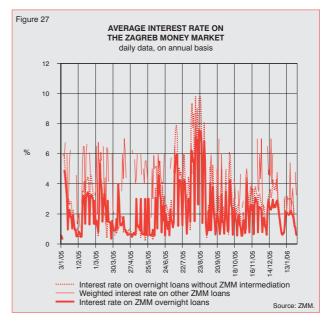

The reduction in the reserve requirement rate from 18% to 17%, coupled with a gradual withdrawal of surplus liquidity, did lead to a fall in the settlement accounts and bank vaults compared with end-2005 (HRK –2.8bn). As a result, reserve money (M0) shrank from HRK 40.4bn at end-2005 to HRK 37.1bn and the kuna reserve requirement, due to its reduced rate, was down HRK 0.8bn, compared with the previous calculation period, while foreign currency reserve requirement in kuna equivalent declined by HRK 0.6bn. Conversely, marginal reserve requirements were up HRK 1.6bn during the same period. Namely, the beginning of the year saw the application of central bank decision under which banks have to allocate 55%, instead of the previous 40%, of any increase in their foreign liabilities relative to their average balance in the initial calculation period. The calculation base has also been expanded to include any increase in funds raised from persons engaged in financial leasing, and funds from domestic persons borrowing abroad on the basis of banks' guarantees and warranties.

At end-January 2006, international reserves of the CNB were EUR 7,627m, which is an increase of EUR 187m compared with the end of 2005, primarily due to the above-mentioned increase in the marginal reserve requirement allocation.

Money Market and Interest Rates

January 2006 saw very good banking system liquidity, additionally boosted by the implementation of the decision on reducing the reserve requirement rate from 18% to 17%. This lead to a rise in investor interest in MoF T-bills and considerably lower liquidity amounts created at CNB's regular reverse repo auctions.

The turnover in loans intermediated by the ZMM also declined in January, with overnight loans accounting for 70% of the total amount at the month end. The weighted interest rate on overnight loans reduced moderately in January, to 1.60%, while the average daily turnover in these loans dropped sharply to HRK 71.7m. While the weighted interest rate on other loans intermediated by the ZMM also fell in January, to 3.30%, their daily turnover rose to HRK 30.0m.

Direct interbank trading saw the average daily turnover in overnight loans drop to HRK 535.0m in January, while these loans' weighted interest rate declined moderately to 2.45%.

Interest rates on T-bills auctioned by the MoF were down in January. The weighted interest rates on 91, 182 and 364-day T-bills were 3.41%, 3.55% and 3.78% respectively in that month. The stock of purchased T-bills increased by HRK 114.6m in January from December, standing at HRK 11.8bn at the month end.

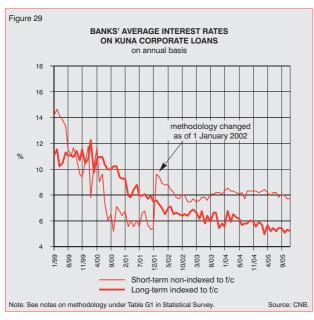

Banks lending interest rates mostly continued to drop, at a faster pace in retail banking, while banks deposit interest rates on foreign exchange sources of funds grew further upwards and those on kuna sources of funds continued to oscillate.

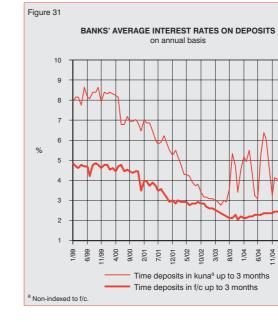

The weighted interest rate on short-time kuna corporate loans not indexed to foreign currency was 7.17% in December, the same as in November. The weighted interest rate on long-term kuna corporate loans indexed to foreign currency declined to 5.18% in December. The weighted interest rate

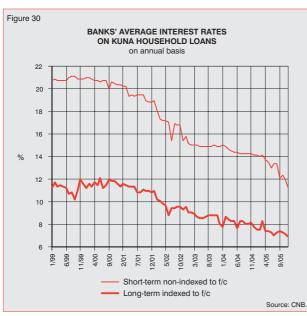

on short-term household loans not indexed to foreign currency suffered a sharp drop, falling from 11.96% in November to its record low of 11.26% in December. This was mostly due to the decrease in the interest rate on revolving household loans, which make up 75% of short-term kuna household loans not indexed to foreign currency. The weighted interest rate on long-term kuna household loans indexed to foreign currency also went down, falling to its all-time low of 6.95% in December.

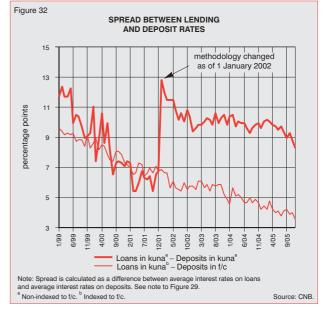

The weighted interest rate on kuna deposits not indexed to foreign currency decreased to 1.58% in January, its lowest level since November 2003. Also down was the weighted interest rate on kuna time deposits maturing in up to three moths, standing at 3.22% in December. The weighted interest rate on foreign currency deposits was up to 2.61% in December. The weighted interest rate on three month foreign currency time deposits also drifted upwards to 2.83% in December, its record high since October 2002.

The spread between interest rates on kuna loans indexed

Source: CNB

to foreign currency and interest rates on foreign currency deposits reached its record low of 3.56 percentage points in December. The spread between interest rates on kuna loans not indexed to foreign currency and interest rates on kuna deposits was also down in that month, dropping to 8.33 percentage points, its record low since the new methodology on reporting on banks interest rates was introduced in early 2002.

Balance of Payments

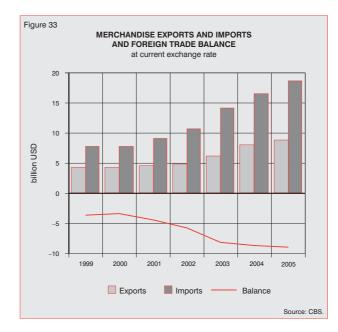

According to the preliminary CBS data, total exports of goods stood at USD 8.8bn in the January-December period of 2005. Concurrently, total imports of goods reached USD 18.5bn. The negative foreign trade balance totalled USD 9.7bn in 2005, up 13.7% year-on-year. In line with this, the imports/exports coverage rate deteriorated slightly, from 48.4% in 2004 to 47.5% in 2005.

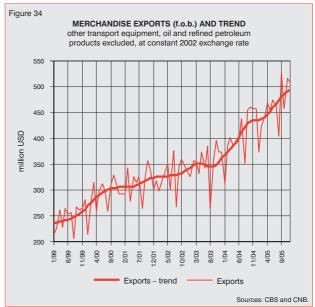

Expressed at constant 2002 exchange rates, total exports of goods rose by 10% year-on-year in 2005, which was two times lower than in 2004. The considerable slowdown of goods exports was mainly the result of the pronounced fall in ship exports which usually contribute the most to total exports of goods. As shown by the relevant SITC division, exports of other transport equipment (ships) fell by 9.5% year-on-year in 2005. In contrast, high oil prices in the world market contributed to the strong growth in the value of oil and refined petroleum products exports. As a result, this division contributed the most to total absolute growth of goods exports in 2005. The year-on-year growth rate of exports of goods (excluding other transport equipment and oil and refined petroleum products) slowed down slightly in 2005. Specifically, exports of goods (excluding other transport equipment and oil and refined petroleum products) grew by 12.8% year-on-year in 2005, down 2.5 percentage points compared with 2004. This was for the most part the result of the absolute fall in exports of wearing apparel (9.6%, expressed at current exchange rates), leather, leather manufactures and dressed fur skins (27.3%), electrical machinery, apparatus and appliances (4.5%) and telecommunication apparatus (19.7%).

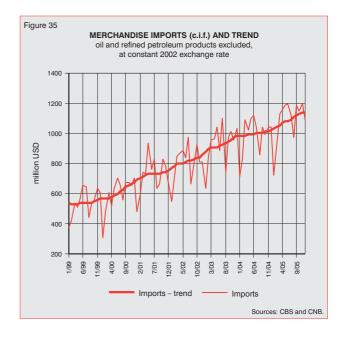

The year-on-year growth rate of total imports of goods, measured at constant exchange rates, stood at 12.5% in 2005, up 3.8 percentage points compared with 2004. The major contributors to the growth of imports of goods were the strong growth in the value of oil and refined petroleum products imports (39.4%, expressed at current exchange rates) as well as imports of other energy products: electricity (72.4%) and industrial and natural gas (43.4%). As regards

Balance of Payments (preliminary data), in million EUR

| JanSep. 2004 | JanSep. 2005 | Indices Jan.–Sep. 05/ Jan.–Sep. 04 |
|-----------------|-------------------|--|
| -118.2 | -418.0 | 353.8 |
| 1,427.3 | 2,347.6 | 164.5 |

| | -118.2 1,427.3 | 2004 2005 |

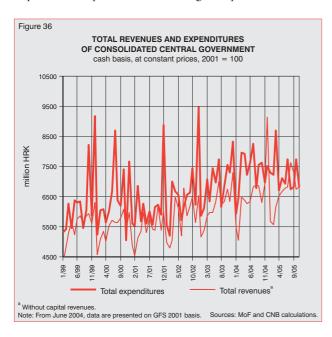

other SITC divisions, the largest contribution to the total growth of imports in 2005 was made by general industrial machinery and equipment (13.2%) and telecommunication apparatus (16.6%). This is further corroborated by the data on the accelerated growth of capital goods imports, with the year-on-year growth rate of imports of machinery and transport equipment (excluding imports of other transport equipment and road vehicles — narrower coverage of capital goods) reaching 8.9% in 2005, up from 4.6% in 2004.

Government Finance

According to the latest MoF data, consolidated central government revenues collected in the period from January to November 2005 totalled 82.6bn, thus accounting for nearly 90% of the 2005 revenue plan. Compared with the same period in 2004 this was a rise of 7.4% largely as a result of tax revenues dynamics (whose contribution to the rise of total revenues amounted to 4.5 percentage points). A significant slowdown of annual revenue growth was seen in November month-on-month compared with the previous months. This was primarily a result of the weak VAT revenues collection arising from slow growth of annual retail trade turnover in October 2005, in real terms (VAT is paid until the last day of the month for the previous month). In addition, November 2004 saw unusually high other revenues (withdrawals from income of quasi-corporations and incidental sales by non--market establishments) so the realised growth rate of consolidated central government revenues in November 2005 reflects also the effect of the base period.

Consolidated central government expenditures (GFS 2001) totalled HRK 83.5bn in the first eleven months of 2005, slightly exceeding 90% of the expenditure plan for the fiscal year. The growth rate totalled 6% year-on-year, with the greatest contribution coming from the rise in salaries and wages. A much slower rate of 2.9% year-on-year was seen in November, primarily due to reduction in subsidies granted to private enterprises and narrowing of expenditures for the

use of goods and services. On the other hand, the greatest positive contribution to expenditures growth in November came from salaries and wages, which rose by 8.9% year-on-year in the month in question.

The consolidated central government deficit (on cash basis, presented in the GFS 1986 format), totalling HRK 7.7bn in the first eleven months of 2005, reduced by a sizeable HRK 3.2bn or 29.6% on the same period in 2004 (HRK 10.9bn). This sizeable reduction was primarily a result of much smaller expenditures of Croatian Motorways Ltd. for acquisition of buildings and structures but also faster growth of revenues over expenditures and smaller expenditures for acquisitions of loans and shares at budgetary central government level.

According to CNB data, central government debt increased by HRK 9.7bn in the period from January to November 2005, reaching 47.8% of the estimated GDP for 2005 (HRK 106.4bn). Central government domestic debt went up by HRK 13.3bn in the period in question in consequence of the rise in liabilities on borrowings from domestic banks and T-bill and bond issues. In the same period, central government external debt went down by HRK 3.6bn due to a HRK 5.5bn decrease in foreign bonds and a HRK 1.9bn growth of liabilities arising from received foreign loans.

Total issued government guarantees went up by HRK 0.9bn in the first eleven months of 2005 in consequence of a HRK 1.6bn rise in domestic guarantees and a parallel HRK 0.7bn decrease in external guarantees.

Statistical Survey

Classification and Presentation of Data on Claims and Liabilities

Data on financial institutions' claims and liabilities are classified according to institutional sectors and financial instruments. Institutional sectors are: financial institutions, central government and funds, other domestic sectors and foreign sector.

The financial institutions sector includes the following sub-sectors: monetary authorities (the central bank), banks, other banking institutions and non-banking financial institutions. The central bank is the Croatian National Bank (CNB). Banks are institutions to which the Croatian National Bank has issued a license to perform banking business services in accordance with the Banking Act, including savings banks during a transition period. Data on banks do not include claims and liabilities of banks undergoing bankruptcy proceedings, nor former branches of banks headquartered outside the Republic of Croatia. Other banking institutions comprise housing savings banks, savings and loan cooperatives and investment funds. Non-banking financial institutions are financial institutions not classified as banks or other banking institutions (for example insurance companies, pension funds).

The central government and funds consists of two sub-sectors, the Republic of Croatia and central government funds. Until December 2003, the sub-sector the Republic of Croatia included government authorities, including the Croatian Roads and the Croatian High-

ways, the State Agency for Deposit Insurance and Bank Rehabilitation and the sub-sector central government funds included the Croatian Institute for Health Insurance, the Croatian Pension Insurance Institute, the Croatian Employment Service, the Croatian Privatisation Fund, the Croatian Waters and the Croatian Bank for Reconstruction and Development.

Since January 2004, the Croatian Roads, the Croatian Highways, and the State Agency for Deposit Insurance and Bank Rehabilitation have been reclassified, from the sub-sector the Republic of Croatia to the sub-sector central government funds.

Other domestic sectors include local government authorities, public and other enterprises and households, including craftsmen and non-profit institutions providing services to households. The subsector other enterprises also comprises banks undergoing bankruptcy proceedings. In some tables other domestic sectors are divided into the following sub-sectors: local government (which comprises units of local and regional self-government), public and other enterprises, and households (including craftsmen and non-profit institutions).

Foreign sector includes foreign legal and natural persons.

All data on claims and liabilities refer to balances at the end of the reporting period. Foreign exchange items are reported in their kuna equivalent at the CNB's midpoint exchange rate at the end of the reporting period.

^a Domestic credit decreased by a one-off HRK 2,759.4m.

Table A1: Monetary and Credit Aggregates

The table shows data on some basic monetary and credit aggregates, including their monthly growth rates. In September 1999, all the monetary aggregates were revised. In previous publications of the CNB, data on claims and obligations of savings banks were not included in the compilation of the monetary aggregates.

Reserve money is taken over in its entirety from the Monetary Authorities Accounts (Table C1).

Money (M1) is defined in the same way as the corresponding item in the Monetary Survey (Table B1). It comprises currency outside banks, deposits with the CNB by other banking institutions and other domestic sectors as well as banks' demand deposits. Money (M1a) comprises currency outside banks and banks' demand deposits, increased by the demand deposits of the central government and funds with banks

Broadest money (M4) comprises Money (M1), savings and time deposits, foreign currency deposits as well as bonds and money market instruments (all components are taken over from the Monetary Survey, Table B1).

Net domestic assets are defined as a difference between total liquid assets and foreign assets (net).

Domestic credit comprises banks' claims on other domestic sectors, other banking institutions and non-banking financial institutions

In May 1999, bankruptcy proceedings have been initiated against several banks so their assets and liabilities are excluded from monetary statistics. In April 1999, those banks' share in monetary aggregate M1 amounted to 259.3 million kuna and in monetary aggregate M4 amounted to 4,035.8 million kuna. Data for June 1999 are comparable with data for July 1999 if Domestic credit is increased by 3,513.5 million kuna.

^a The first revaluation of securities with the effect of HRK 165.5m was conducted within the CNB's international reserves as at 31 December 2001. Accrued interest on deposits, with the effect of HRK 63.8m, was included in the international reserves as at 31 December 2001 as well. The CNB's foreign liabilities increased by HRK 6.4m on the basis of accrued interest, while liabilities on the basis of required foreign exchange reserves increased by HRK 8.6m.

Table B1: Monetary Survey

The monetary survey shows consolidated data from the Monetary Authorities Accounts (Table C1) and Banks' Accounts (Table D1).

Foreign assets (net) are the difference between total foreign assets and total foreign liabilities of the CNB and banks.

Domestic credit is the sum of corresponding items from Monetary Authorities Accounts and Banks' Accounts. Claims on central government and funds are reported on a net basis, i.e. decreased by central government and funds' deposits with the CNB and banks.

Money is the sum of currency outside banks, deposits by other

banking institutions with the CNB, deposits by other domestic sectors with the CNB and banks' demand deposits (item Demand deposits in Banks' Accounts, Table D1).

Items Savings and time deposits, Foreign currency deposits as well as Bonds and money market instruments are entirely taken over from the Banks' Accounts, while item Restricted and blocked deposits represents the sum of corresponding items from the Monetary Authorities Accounts (excluding banks' blocked deposits with the CNB) and Banks' Accounts. Other items (net) are unclassified liabilities decreased by unclassified assets.

Table B2: Number of Reporting Banks and Savings Banks and their Classification by Total Assets

The table shows the total number of banks and savings banks during the transition period which report monthly to the CNB. Their operations are shown in the Banks' Accounts. Monetary statistics includes reporting institutions under liquidation and, until February 2005, institutions whose operating licences have been revoked, but which have not initiated liquidation proceedings.

Special reporting requirements applied to savings banks until June 1995. Savings banks were not legally obliged to report on their operations, so that data up to June 1995 relate only to those savings banks that reported voluntarily to the CNB. From July 1995 on, the data cover all registered savings banks. Savings banks that were granted a bank operating license are required to adjust their operations to the provisions of the Banking Act by 31 December 2006.

The table also shows the classification of reporting banks and savings banks according to their total assets.

a From October 2001 to May 2003 Liabilities to foreign banks include also liabilities based on CNB bills subscribed by non-residents.

b In December 2002, CDA accounts with the CNB for the gross and net settlement of purchased securities have been reclassified from the sector central government to the sector other financial organisations.

Table C1: Monetary Authorities Accounts

The table reports data on claims and liabilities by monetary authorities.

Foreign assets include the following forms of foreign currency and kuna claims on foreign legal and natural persons: monetary gold, holdings of special drawing rights, foreign cash in vault, reserve position in the International Monetary Fund, current account balances with foreign banks, time deposits with foreign banks and accrued interest, foreign currency security investments and other claims.

Claims on central government and funds are loans and overdue claims on the budget of the Republic of Croatia. In accordance with the Croatian National Bank Act that entered into force in April 2001, the Croatian National Bank may not extend credit to the Republic of Croatia. Hence, this item comprises only overdue claims on the budget of the Republic of Croatia based on the payment system operations and the liabilities to the IMF and foreign banks. Until April 2001, Claims in kuna were short-term loans granted for the purpose of overcoming timing differences between incoming revenues and execution of budgetary expenditures, long-term loans granted by special decrees by the government of the Republic of Croatia, and overdue claims on the budgetary central government, while Claims in foreign currency was a counter-entry to the liability to the IMF based on the succession of membership in that institution.

Claims on other domestic sectors are loans and overdue claims on other domestic sectors, including banks in bankruptcy proceedings.

Claims on banks are credits to banks and overdue claims on banks. Credits to banks comprise Lombard credits, short-term liquidity credits, other credits and reverse repo transactions. Item Lombard credits comprises credits to banks for regular maintaining of the day-to-day liquidity, which were replaced by lombard credits in December 1994. Short-term liquidity credits, which have been granted since the beginning of 1999, also serve to bridge liquidity problems. Other credits include intervention credits, special credits for bridging liquidity problems granted in the past (initial credits, prerehabilitation credits), due but unpaid credits and banks' deposits with the CNB. From April 2005 on, reverse repo transactions are conducted on a weekly basis Overdue claims on banks comprise settlement account overdrafts (until mid-1994) and banks' failure to correctly and promptly allocate and maintain statutory reserve requirements.

Since May 1999, Claims on other domestic sectors include overdue claims on banks against which bankruptcy proceedings have been

initiated. Due to the reclassification of savings banks from the sub-sector other banking institutions to the sub-sector banks, data for Claims on banks and Claims on other banking institutions have been revised.

Reserve money consists of currency outside banks, cash in banks' vaults, banks' deposits with the CNB, other banking institutions' deposits and other domestic sectors' deposits with the CNB. Banks' deposits are: settlement account balances, statutory reserves deposited on a special account with the CNB, CNB bills on an obligatory basis and overnight deposits. Deposits by other banking institutions included, until September 2003, settlement account balances of housing savings banks. Deposits by other domestic sectors are other domestic sectors' giro account balances which, on the basis of legal acts are deposited with the Croatian National Bank.

Restricted and blocked deposits include required foreign exchange reserves and accrued interest, restricted deposits and blocked foreign exchange deposits. Banks are required to set aside the reserve requirements against certain foreign exchange sources of funds and the marginal reserve requirements (from August 2004 on) in special accounts at the Croatian National Bank. Restricted deposits are kuna funds set aside on the basis of a court order or legal regulation, kuna funds set aside in the period between May 1999 and April 2002 and deposits of banks against which bankruptcy proceedings have been initiated. Blocked foreign exchange deposits are funds that were set aside in special accounts at the Croatian National Bank for repaying unpaid amounts due to foreign creditors.

Foreign liabilities include use of IMF credits, liabilities to international financial institutions and foreign banks and accrued interest.

Central government and funds deposits are demand deposits and foreign currency deposits of the Republic of Croatia and central government funds with the CNB, and CNB bills purchased by central government institutions.

CNB bills are kuna and f/c CNB bills on a voluntary basis, excluding CNB bills voluntarily purchased by central government institutions

Capital accounts include reserves, provisions and the income and cost accounts.

Other items (net) are unclassified liabilities decreased by unclassified assets of the Monetary Authorities Accounts.

Due to the reclassification of savings banks from the sub-sector other banking institutions to the sub-sector banks, data for Currency outside banks, Banks' cash in vaults, Banks' deposits and Deposits of other banking institutions were revised.

Table D1: Banks' Accounts

Banks' Accounts include data on banks' claims and liabilities. Banks' mutual claims and liabilities are consolidated. In September 1999, the data was revised to include savings banks. The whole data series was revised accordingly.

Required reserves held at the central bank include kuna and foreign exchange reserves. Kuna reserves include vault cash and kuna funds held in accounts at the central bank. Foreign exchange reserves include foreign exchange held in CNB's foreign exchange accounts.

Foreign assets are the following forms of kuna and foreign currency claims on foreign legal and natural persons: foreign cash in vaults, deposits with foreign banks (including loro letters of credit and other collateral), securities, loans, and equities.

Claims on central government and funds are the following forms of claims in kuna and foreign currency: securities and loans. Bonds issued in accordance with the Act on Converting Households' Foreign Exchange Deposits into the Public Debt of the Republic of Croatia are shown separately. Other claims also included, until July 2000, bonds issued in accordance with the Act on the Issue of Bonds for the Restructuring of the Economy of the Republic of Croatia. These bonds have been replaced, pursuant to a Decree of the Government of the Republic of Croatia on the Issuing of Replacement Bonds for the Restructuring of the Economy, issued in April 2000, by kuna bonds on which interest is paid.

Claims on other domestic sectors include the following claims in kuna and foreign currency: money market instruments, bonds, loans (including acceptances), and equities.

The same forms of kuna and foreign currency claims are included in claims on other banking institutions and non-banking financial institutions, with one difference: Claims on other banking institutions also include deposits with those institutions.

Items Demand deposits, Savings and time deposits, Foreign currency deposits as well as Bonds and money market instruments comprise banks' liabilities to other domestic sectors, other banking institutions and non-banking financial institutions.

Demand deposits include giro and current accounts balances and banks' obligations arising from kuna payment instruments issued, minus currency in the payment system, i.e. checks in banks' vaults and checks in collection.

Savings and time deposits are kuna sight deposits as well as kuna time and notice deposits.

Foreign currency deposits are foreign currency sight deposits as well as foreign currency time and notice deposits.

Bonds and money market instruments are banks' liabilities for securities issued (net) and loans obtained. Issued subordinated and hybrid instruments, purchased by foreign investors, are excluded from this item.

Foreign liabilities comprise the following forms of kuna and foreign currency liabilities to foreign legal and natural persons: giro and current accounts, savings deposits (including loro letters of credit and other forms of collateral), time deposits, loans received and liabilities due. Issued subordinate and hybrid instruments, purchased by foreign investors, are also included in loans received. Central government and funds' deposits are all forms of banks' kuna and foreign currency liabilities (except restricted and blocked deposits) to the central government and funds.

Credit from central bank comprises loans obtained from the CNB and deposits by the CNB with banks. Repurchase of securities is also considered and treated as a loan.

Restricted and blocked deposits comprise the following banks' liabilities: kuna and foreign currency restricted deposits by other domestic sectors, other banking institutions, non-banking financial institutions, central government and funds as well as foreign legal and natural persons; and households' blocked foreign currency deposits, regulated by the Act on Converting Households' Foreign Exchange Deposits into the Public Debt of the Republic of Croatia.

Capital accounts are share capital, profit or loss for the previous and current year, retained earnings (loss), legal reserves, reserves provided for by the articles of association and other capital reserves, hedging reserves, unrealised gains (losses) from financial assets clas-

sified as available-for-sale assets, value adjustments and specific reserves for unidentified losses.

Other items (net) are unclassified liabilities decreased by unclassified assets, including the fair value of derivative financial instruments.

Tables: D2 - D12

This group of tables (with the exception of Table D5) represents an elaborate presentation of appropriate items of claims and liabilities of Banks' Accounts (Table D1).

Table D2: Banks' Foreign Assets

This table shows banks' claims on foreign legal and natural persons

Foreign assets of banks' comprise foreign assets in kuna and for-

eign currency.

Claims on foreign banks and Claims on foreign non-banks (total and by financial instruments) are shown separately within both foreign assets in kuna and in foreign currency.

Table D4: Banks' Claims on Other Domestic Sectors

The table shows banks' kuna and foreign currency claims on other domestic sectors, classified according to financial instruments: money market instruments (including factoring and forfaiting since January 2004), loans and advances (including acceptances and purchased claims), and equities.

Until October 1994, foreign currency loans could be granted only when banks simultaneously borrowed abroad in their own name and for the account of the end-user.

Table D6: Demand Deposits with Banks

The table shows demand deposits with banks, classified by domestic institutional sectors.

Demand deposits are the sum of other domestic sectors', other

banking institutions' and non-banking financial institutions' giro and current accounts balances, minus currency in the payment system (i.e. amount of checks in banks' vaults and checks in collection). Banks' obligations arising from kuna payment instruments issued are included in the household sector.

Table D9: Bonds and Money Market Instruments

The table shows banks' liabilities for securities issued (net) and loans received from other domestic sectors, other banking institutions and non-banking financial institutions.

Money market instruments (net) comprise banks' net liabilities for CNB bills, bills of exchange (issued and accepted) and other securities issued.

Bonds (net) comprise banks' net liabilities for kuna and foreign currency bonds issued, as well as issued subordinated and hybrid instruments, excluding those purchased by foreign investors.

Other domestic borrowing comprises loans received, reported total and classified by institutional sectors.

Table D10: Banks' Foreign Liabilities

The table shows banks' total foreign currency and kuna liabilities to foreign legal and natural persons, with the exception of restricted kuna and foreign currency deposits by foreign legal and natural persons.

Banks' foreign liabilities comprise foreign currency liabilities and

foreign kuna liabilities.

Within foreign kuna and foreign currency liabilities, liabilities to foreign banks are reported separately from liabilities to foreign non-banks (total and by financial instruments). Loans and advances also include issued subordinated and hybrid instruments purchased by foreign investors.

Table D11: Central Government and Funds' Deposits with Banks

The table reports total banks' kuna and foreign currency liabilities to the central government and funds, with the exception of restricted (kuna and foreign currency) deposits by the central government and funds with banks.

Kuna and foreign currency deposits by the Republic of Croatia and central government funds are shown separately. Kuna deposits comprise demand deposits, savings deposits, time and notice deposits, and loans obtained from the central government and funds. Foreign currency deposits comprise savings deposits, time and notice deposits, and refinanced loans.

Table D12: Restricted and Blocked Deposits with Banks

Table D12: Restricted and Blocked Deposits with Banks

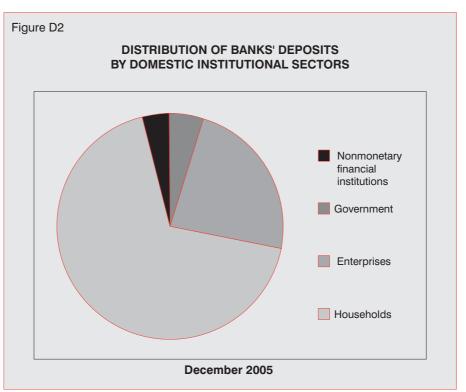

The table shows households' restricted deposits (kuna and foreign currency) and blocked deposits.

Restricted and blocked deposits include two categories of deposits: restricted (kuna and foreign currency) deposits and blocked for-

eign currency deposits.

Blocked foreign currency deposits include households' foreign currency deposits regulated by the Act on Converting Households' Foreign Exchange Deposits into the Public Debt of the Republic of Croatia.

Note:

Sector "Government" includes the central government and funds and local government and funds.

Sector "Non-monetary financial institutions" includes other banking institutions and non-banking financial institutions.

Table E1: Housing Savings Banks' Accounts

Housing savings banks' accounts include data on claims and liabilities of the Croatian housing savings banks. All housing savings banks' claims and liabilities refer exclusively to domestic sectors.

Housing savings banks' required reserves held at the central bank include funds in vaults. Until September 2003, they also included kuna funds held in accounts at the central bank.

Claims on central government and funds are claims in kuna on the Republic of Croatia and central government funds.

Claims on other domestic sectors include kuna loans to local government and households.

Claims on banks include loans extended to banks, as well as deposits with banks, including, since October 2003, accounts for regu-

lar operations with banks.

Claims on other banking institutions include investments in investment funds.

Item Time deposits includes local government and households' time deposits.

Bonds and money market instruments are housing savings banks' liabilities for securities issued (net) and loans obtained.

Capital accounts are share capital, profit or loss for the previous and current year, retained earnings (loss), legal reserves, reserves provided for by the articles of association and other capital reserves, hedging reserves, unrealised gains (losses) from financial assets classified as available-for-sale assets, value adjustments and specific reserves for unidentified losses. Other items (net) are unclassified liabilities decreased by unclassified assets.

^a Weighted averages of weighted repo rates achieved at regular reverse repo auctions of the CNB in the reporting month

^c Since 14 December 2005.

Table F1: Credit Rates of the Croatian National Bank

The table shows interest rates used by the CNB to calculate and charge interest on credits from the primary issue and on all other claims.

Credit rates of the CNB are set by decisions of the Council of the Croatian National Bank, on annual basis. Exceptionally, from June 1995 interest rate charged by the CNB on Lombard credits was 1.5 percentage point higher than the weighted average interest rate on CNB bills on a voluntary basis (which serve as collateral for Lombard credits) in cases when the weighted average interest rate was higher than 16.5%. Congruently, from June 1995 to August 1996 the table reports the weighted average interest rate on Lombard credits.

Data shown in column 4 refer to weighted interest rates of weighted repo rates achieved at regular reverse repo auctions of the CNB in the reporting month.

Time series presented in the table contain certain breaks, due to changes in the CNB's monetary policy instruments.

Data shown in column 7 refer, until September 1994, to interest rates on special credits for savings deposits' payments and for payments from households' current accounts, and from October 1994 until September 1997 to interest rates on daily credits for savings deposits and households' current accounts in kuna. Daily credits, as opposed to special credits, are paid back on the same day. In October 1997, this instrument was replaced by daily credits for overcoming short-term liquidity problems that are collateralized by CNB bills. Since December 1998 until April 1999, this credit is incorporated in Lombard credit, applying different interest rate for its usage within one day.

Data shown in column 8 refer, until December 1994, to interest rate on initial credits, and since 18 March 1998, to credits for overcoming liquidity problems of banks under evaluation for entry into rehabilitation and restructuring procedures and since February 1999, to interest rates on short-term liquidity credits. Since December 1999, data show interest rates on short-term liquidity credit with a maturity over 3 months which is 1 percentage point higher than interest rate on Lombard credits. Interest rate on short-term liquidity credit up to 3 months is 0.5 percentage point higher than interest rate on Lombard credits.

b Breaks in the series of data are explained in notes on methodology.

^a Breaks in the series of data are explained in notes on methodology. ^b Since 8 June 2005.

Table F2: Deposit Rates of the Croatian National Bank

The table shows interest rates used by the CNB to calculate and pay interest on funds deposited with the CNB and on issued securities.

Interest rates paid by the CNB for appropriated statutory reserve funds are set by a decision of the Council of the CNB. Until April 2005, the appropriated statutory reserve funds included the calculated statutory reserve funds that were deposit in a special statutory reserve account with the CNB, or maintained (in average) in bank's settlement accounts, or deposited in a special account with the CNB for the settlement of net positions in the NCS. From April 2005, they include the calculated statutory reserve funds allocated to a special statutory reserve account with the CNB (column 3).

Interest rates on CNB bills on an obligatory basis are set by a decision of the Council of the CNB. Interest rates on CNB bills on a voluntary basis are set at CNB bills' auction sales. Congruently, columns 5, 6 and 7 report weighted average interest rates attained at auctions of CNB bills.

From November 1994 through January 2001, columns 7 and 8 report interest rates on CNB bills on a voluntary basis due in 91 and 182 days respectively.

Since April 1998 columns 9 through 13 report weighted average interest rates on CNB bills on a voluntary basis in EUR and USD (until December 1998 in DEM and USD) attained at CNB bills' auctions as a weighted average of subscribed amounts in those two currencies.

Column 14 reports the interest rate on overnight deposits with the CNB.

Table F3: Banks' Reserve Requirements

This table shows data on monthly averages of day-to-day balances of banks' kuna and foreign currency reserve requirements with the CNB. Savings banks are included beginning in July 1999.

Column 3 shows the weighted average reserve requirement ratio as a percentage of the kuna and foreign currency reserve requirement in the reserve base.

Reserve requirement (column 4) represents the prescribed amount of funds banks are required to deposit in a special statutory reserve account with the CNB, or to maintain (in average) in their settlement accounts and in vaults, or in accounts of liquid foreign exchange claims (which include foreign currency cash and checks in foreign exchange, liquid foreign exchange claims maintained in the accounts with the high-grade foreign banks and foreign currency CNB bills).

Column 5 shows the amount of kuna reserve requirements. Between January 1995 and December 2000, this amount corresponded with the statutory reserve requirement instrument, while until December 1994 it comprised two instruments: statutory reserves and liquid assets requirement – LAR (except for the part in which banks were conforming to this requirement by registering CNB bills on a voluntary basis). In December 2000, reserve requirements in kuna and in foreign currency were unified, i.e. reserve requirements rate, periods for calculating, allocating and maintaining reserve requirements were unified, as well as a minimum percentage of the total reserve requirements deposited with the Croatian National Bank. Starting from September 2001, column 5 includes also the f/c component of reserve requirements that is set aside/maintained in kuna.

Column 6 shows the amount of foreign currency reserve requirements, i.e. the prescribed amount of funds banks are required to deposit in the CNB's foreign exchange accounts, or to maintain (in av-

erage) in accounts of liquid claims. Until November 2000, the calculation base consisted of average daily balances of household foreign exchange savings deposits with a remaining maturity of up to 3 months, while starting from December 2000 the base consists of foreign exchange sources of funds, including: ordinary foreign exchange accounts, special foreign exchange accounts, sight foreign exchange accounts and savings deposits, received foreign exchange deposits and received foreign exchange loans, as well as obligations arising from securities issued in foreign exchange (excluding the bank's equity securities). Starting from November 2001, the base includes also hybrid and subordinated instruments.

Column 7 shows the total amount of other obligatory deposits with the CNB, including CNB bills on an obligatory basis, those CNB bills on a voluntary basis used by banks to maintain the prescribed minimal liquidity (LAR), special statutory reserves (until July 1995), statutory reserves on f/c deposits, f/c credits from foreign banks and guarantees for such credits, and marginal reserve requirements (from August 2004 on).

Column 8 shows the portion of the kuna reserve requirement which banks deposit in a statutory reserve account with the CNB (until December 1994 this amount corresponded with the statutory reserve instrument, while since January 1995 a minimum percentage of the total reserve requirement banks are required to deposit in a special statutory reserve account with the CNB has been prescribed). In April 2005, this percentage was set at 70%.

Column 9 shows the portion of the foreign currency reserve requirement which banks deposit in the CNB's foreign exchange accounts. The percentage for allocating the foreign currency component of reserve requirements calculated on the basis of foreign exchange funds of non-residents and foreign exchange funds received from legal persons in a special relationship with a bank amounts to 100%, while the percentage for allocating the remaining portion of

the foreign currency component of reserve requirements amounts to 60%.

Column 10 shows the weighted average remuneration rate on all forms of immobilized kuna funds which include reserve requirements and other obligatory deposits with the CNB.

Column 11 shows the weighted average remuneration rate on allocated funds in foreign currency, including the marginal reserve requirement funds (from August 2004 on). From June 2005 the CNB pays remuneration equalling 50% of the US Federal Funds Target Rate for the funds allocated in US dollars and 50% of the ECB Minimum Bid Refinance Rate for the funds allocated in euros. In both cases the rate in effect on the day of allocation is applied.

Table F4: Banks' Liquidity Indicators

The table reports monthly averages of day-to-day balances of some indicators of banks' liquidity. Savings banks are included beginning in July 1999.

Column 3 shows free reserves in kuna, defined as bank's total reserves (in settlement accounts and in vaults) decreased by the minimal average settlement account and vault balance, as prescribed by instruments of the CNB.

Column 4 shows free reserves in foreign currency, defined as

funds for the maintenance of foreign currency reserve requirements (foreign currency cash and checks in foreign exchange, liquid foreign exchange claims maintained in the accounts with the high-grade foreign banks and foreign currency CNB bills) decreased by the minimal required balance of these funds in the same period.

Column 5 shows the primary liquidity ratio as a percentage of monthly day-to-day kuna free reserves averages (column 3) in monthly day-to-day averages of deposits which constitute the reserve base.

Column 6 shows the monthly average of day-to-day balances of secondary liquidity sources used. Secondary liquidity sources comprise: Lombard credits (since December 1994), short-term liquidity credits (since February 1999), and overdue liabilities to the CNB.

Column 7 reports the monthly average of day-to-day balances of kuna CNB bills on a voluntary basis (until December 1994, this amount is decreased by the portion of voluntarily registered CNB bills used by banks to maintain the prescribed minimal liquidity).

Column 8 reports the monthly average of day-to-day balances of foreign currency CNB bills on a voluntary basis (EUR and USD).

Column 9 reports the monthly average of day-to-day balances of kuna MoF treasury bills. Until September 2002, it shows the discounted value of treasury bills, while starting from October 2002, it shows their nominal value.

^a Relative significance is calculated as a percentage of corresponding credit category in total credits disbursed in the reporting month (according to data for the last period included in the table). Note: A break in the time series occurred due to changes in the methodology used in interest rate statistics as of 1 January 2001. This especially refers to interest rates shown in columns 5, 6 and 7. Interbank credits, which bear relatively low interest rates, were, among others, excluded from short-term credits to enterprises. The increase in interest rates was also caused by the weighting method: all categories are weighted by the amounts of newly-granted credits, except credit lines whose relative share grew in the new coverage, which are weighted by book

Table G1: Banks' Interest Rates on Kuna Credits Not Indexed to Foreign Currency

The table contains weighted averages of banks' and savings banks' monthly interest rates on kuna credits not indexed to f/c, reported on a yearly basis.

Up to December 2001, data refer to weighted averages of banks' monthly interest rates on kuna credits not indexed to f/c granted to legal persons (which included enterprises, the public sector, financial institutions, non-profit institutions and non-residents) and households, reported on a yearly basis. Savings banks are not covered.

Starting from January 2002, data refer to weighted averages of banks' and savings banks' monthly interest rates on kuna credits not indexed to f/c granted only to enterprises (public and other) and households, reported on a yearly basis.

Up to February 1996, columns 3 and 4 showed interest rates on the interbank money market, according to information published by the Zagreb Money Market (ZMM). Starting from March 1996, interest rates on the money market are calculated as weighted monthly averages of weighted daily interest rates and shown separately for trad-

ing in overnight credits and trading in other credits on the ZMM. In the period between May 1998 and January 2001, the repayment of credits granted on the interbank overnight market was guaranteed by banks' required reserves with the CNB. Columns 5 through 13 show weighted averages of banks' and savings banks' monthly interest rates classified by maturity and sectors. Interest rates on short-term credits to enterprises also include interest rates on callable loans.

Data on banks' and savings banks' interest rates on kuna credits not indexed to f/c are based on banks' and savings banks' periodic reports. The basis for calculation of weighted averages are amounts of credits bearing corresponding interest rates, which were disbursed during the reporting month, with the exception of interest rates on giro and current account credit lines, for which weighted averages were calculated based on the balance of these loans at the end of the reporting month.

Relative significance of particular interest rates (reported in the last line of the table) refers to data for the last period included in the table. It is calculated as a percentage of the corresponding credit category (to which exchange rates apply) in total credits included in the calculation of weighted averages for that period.

a Relative significance is calculated as a percentage of corresponding credit category in total credits disbursed in the reporting month (according to data for the last period included in the table).

Table G2: Banks' Interest Rates on Kuna Credits Indexed to Foreign Currency and on Credits in Euros

The table contains weighted averages of banks' and savings banks' monthly interest rates on kuna credits indexed to f/c and on credits in euros, reported on a yearly basis.

Up to December 2001, data refer to weighted averages of banks' monthly interest rates on kuna credits indexed to f/c and on credits in euros (or German marks) granted to legal persons (which included enterprises, the public sector, financial institutions, non-profit institutions and non-residents) and households, reported on a yearly basis. Savings banks are not covered.

Starting from January 2002, data refer to weighted averages of banks' and savings banks' monthly interest rates on kuna credits indexed to f/c and on credits in euros granted only to enterprises (public and other) and households, reported on a yearly basis.

Data on banks' and savings banks' interest rates on kuna credits indexed to f/c and on credits in euros are based on banks' and savings

banks' periodic reports. The basis for calculation of weighted averages are amounts of credits bearing corresponding interest rates, which were disbursed during the reporting month.

Columns 3 through 11 show weighted averages of banks' and savings banks' monthly interest rates classified by maturity and sectors. Interest rates on short-term credits to enterprises also include interest rates on callable loans.

Up to December 2001, interest rates on credits in euros (columns 12, 13 and 14) refer to credits released in German marks in the reporting month, and starting from January 2002, they refer to credits released in euros, while weighted averages are calculated based on their kuna equivalent using current exchange rate. Credits released in other currencies are not included in this table.

Relative significance of particular interest rates (reported in the last line of the table) refers to data for the last period included in the table. It is calculated as a percentage of the corresponding credit category (to which exchange rates apply) in total credits included in the calculation of weighted averages for that period.

a Relative significance is calculated as a percentage of corresponding deposit category in total deposits received in the reporting month (according to data for the last period included in the table).

Table G3: Banks' Interest Rates on Kuna Deposits Not Indexed to Foreign Currency

The table contains weighted averages of banks' and savings banks' monthly interest rates on kuna deposits not indexed to f/c, reported on a yearly basis.

Up to December 2001, data refer to weighted averages of banks' monthly interest rates on kuna deposits not indexed to f/c received from legal persons (which included enterprises, the public sector, financial institutions, non-profit institutions and non-residents) and households, reported on a yearly basis. Savings banks are not covered.

Starting from January 2002, data refer to weighted averages of banks' and savings banks' monthly interest rates on kuna deposits not indexed to f/c received from enterprises (public and other) and households, reported on a yearly basis.

Data on banks' and savings banks' interest rates on kuna deposits not indexed to f/c are based on banks' and savings banks' periodic reports.

Column 3 reports weighted averages of monthly interest rates on total kuna deposits (giro and current accounts, household savings deposits and time deposits) not indexed to f/c. Column 4 shows

weighted averages of monthly interest rates on deposits in giro and current accounts not indexed to f/c received from enterprises (until December 2001, all legal persons) and households, and column 5 shows weighted averages of monthly interest rates on total time deposits not indexed to f/c.

The basis for calculation of weighted averages for kuna time deposits not indexed to f/c are the amounts of those deposits received during the reporting month. The basis for calculation of weighted averages for deposits in giro and current accounts are the end-of-month book balances of those deposits. Weighted averages of interest rates on total kuna deposits not indexed to f/c (column 3) are weighted by the end-of-month balances of all categories included in the calculation.

Kuna and foreign currency deposits used as collateral for credit are included, while restricted deposits (deposits used for payment of imports and other restricted deposits) are not included into the calculation of weighted averages.

Relative significance of particular interest rates (reported in the last line of the table) refers to data for the last period included in the table. It is calculated as a percentage of the corresponding deposit category (to which exchange rates apply) in total deposits included in the calculation of weighted averages for that period.

^a Relative significance is calculated as a percentage of corresponding deposit category in total deposits received in the reporting month (according to data for the last period included in the table).
^b Of the total amount of deposits to which this interest rate refers, 16.34 percent refers to enterprises.

Table G4a and b: Banks' Interest Rates on Kuna Deposits Indexed to Foreign Currency and on Foreign Currency Deposits

The table contains weighted averages of banks' and savings banks' monthly interest rates on kuna deposits indexed to f/c and on foreign currency deposits, reported on a yearly basis.

Up to December 2001, data refer to weighted averages of banks' monthly interest rates on kuna deposits indexed to f/c and on foreign currency deposits received from legal persons (which included enterprises, the public sector, financial institutions, non-profit institutions and non-residents) and households, reported on a yearly basis. Savings banks are not covered.

Starting from January 2002, data refer to weighted averages of banks' and savings banks' monthly interest rates on kuna deposits indexed to f/c and on foreign currency deposits received from enterprises (public and other) and households, reported on a yearly basis.

Data on banks' and savings banks' interest rates on kuna deposits indexed to f/c and on foreign currency deposits are based on banks' and savings banks' periodic reports.

Column 3 reports weighted averages of monthly interest rates on total kuna savings and time deposits indexed to f/c received from enterprises (until December 2001, all legal persons) and households, whereas weighted averages of monthly interest rates on time deposits are shown in columns 4 (short-term deposits) and 5 (long-term deposits) respectively.

Up to December 2001, interest rates on foreign currency deposits refer to deposits received in German marks or US dollars, and start-

ing from January 2002, they refer to deposits received in euros and US dollars, while weighted averages are calculated based on their kuna equivalent using current exchange rate. Deposits received in other currencies are not included in this table.

The basis for calculation of weighted averages for kuna time deposits indexed to f/c and foreign currency time deposits are the amounts of those deposits received during the reporting month. The basis for calculation of weighted averages for savings deposits indexed to f/c are the end-of-month book balances of those deposits. Starting from January 2002, weighted averages of interest rates on total kuna deposits indexed to f/c (column 3) are weighted by the end-of-month balances of all categories included in the calculation.

The average interest rate on total foreign currency deposits (column 6) refers to the weighted average of monthly interest rates on savings and time deposits, which are weighted by the end-of-month balances of all categories included in the calculation.

The basis for calculation of weighted averages of monthly interest rates on total foreign currency savings deposits (column 7) are the end-of-month balances of those deposits.

The basis for calculation of weighted averages of monthly interest rates on total foreign currency time deposits (column 12) are the amounts of those deposits received during the reporting month. The same basis is applied in calculating weighted averages of monthly interest rates on total short-term foreign currency deposits (column 13) and on total long-term foreign currency deposits (column 18).

Relative significance of particular interest rates (reported in the

^a Preliminary data. ^b Revised data

Note: In the period from January 1994 to September 2001 all foreign exchange sale and purchase transactions in banks' reports delivered to the CNB were recorded based on realised sale/purchase transaction regardless of the contracted term for realisation and were as such transferred into the Table on Banks' Trade with Foreign Exchange. As of the of change in the reporting scope dated 1 October 2001 reports contain data on contracted sale and purchase of foreign exchange broken down by spot, forward and swap transactions. Based on the aforesaid the data for 2002, 2003 and 2004 have been revised so as to include only the data on contracted spot transactions with banks no longer included into the "legal persons" category.

Table G5: Banks' Trade with Foreign Exchange

Data on trade with foreign exchange between banks comprise spot transactions of the purchase and sale of foreign exchange in domestic foreign currency market. Spot transactions are contracted obligations to buy/sell foreign currency within maximally 48 hours. The

transactions are classified by category of participants (legal and natural persons, domestic and foreign banks and the CNB). Sources of data are banks' reports on trading with foreign exchange and statistical data on foreign payment operations.

Other Croatian National Bank transactions include foreign exchange sales and purchases on behalf of the Ministry of Finance.

a Preliminary data

Note: The item net errors and omissions also comprises the counter entry of a part of revenues from travel services which relates to such revenues not stated in the banks' records.

Table H1-H6: Balance of Payments

The balance of payments of the Republic of Croatia represents a systematic overview of the value of economic transactions performed by the Croatian residents with foreign countries within a particular period. It is compiled in accordance with the recommendations of the International Monetary Fund (Balance of Payments Manual, Fifth Edition, 1993). Data sources include: 1. reports of the government institutions (Central Bureau of Statistics and Croatian Institute for Health Insurance), 2. special reports of the Croatian National Bank (International Transaction Reporting System (ITRS), external debt relations, monetary statistics and reserve assets) and 3. estimates and statistical research carried out by the Croatian National Bank.

Balance of payments of the Republic of Croatia data are reported in three currencies: in euros (EUR), US dollars (USD) and domestic currency (HRK). In all cases, the same data sources are used and the same principles regarding the scope of transactions and the procedures for compiling particular items are applied. Since the original data are reported in different currencies, the transaction values are converted from the original currency into the reporting currency by applying the exchange rate from the CNB exchange rate list in one of the following manners:

- by applying the midpoint exchange rate on the date of the transaction:
- by applying the average monthly or quarterly midpoint exchange rate in the case the transaction date is not available;

by applying the end-of-period exchange rate for the calculation of a change in the transaction value between the two periods; the end-of-period balances reported in the original currency serve as a basis for calculating the change in the original currency value, which is converted, by applying the average midpoint exchange rate in the observed period, into the value of change in the reporting currency.

The Report of the Central Bureau of Statistics on merchandise foreign trade of the Republic of Croatia represents the basic data source for the balance of payments items related to exports and imports. These data are adjusted, in accordance with the recommended compilation method, for coverage and classification. Accordingly, goods exports and imports in the balance of payments are reported at f.o.b. parity. The value of exports at this parity is already contained in the previously mentioned CBS Report, whereas the value of imports f.o.b. is estimated on the basis of research studies of the CNB on the stratified sample of importers. The resulting value serves as a basis for the estimate of the share of transportation and insurance services by which the original value of imports c.i.f., stated in the CBS Report, is reduced. In the 1993-2001 period, this share stood at 7.10% (estimated only on the basis of the largest and large exporters), while from 2002 on it has amounted to 3.73%. In the period from 1993 to 1996, the value of imports was modified by estimates of imports in duty free zones, which have been included in the merchandise trade statistics since 1997. Starting from 1996, goods exports and imports have been modified by the data on repairs on goods and goods procured in

a Preliminary data.

ports by carriers. In addition, since 1999, based on the Survey on Consumption of Foreign Travellers in Croatia and Domestic Travellers Abroad, the item of goods exports has been modified by the estimated value of goods sold to foreign travellers and tourists and taken out of the Republic of Croatia. The item of goods imports is adjusted for the estimated value of goods imported personally by the Croatian citizens from the neighbouring countries (shopping expenditures).

Transportation, travel and other services are reported separately under service account. Income and expenditures on the basis of transportation, in the 1993-1998 period, were adopted from the ITRS. Starting from 1999, income and expenditures arising from transportation of goods and passengers, as well as the value of accompanying services, which together constitute the total value of these services, have been compiled on the basis of the results of the Research on transactions related to international transportation services, carried out by the CNB. Owing to an exceptionally large population of road carriers, income and expenditures on the basis of road transportation are not adopted from this research. They are compiled by using ITRS data. As regards transportation of goods, expenditures are supplemented by a portion of transportation and insurance costs related to imports of goods which belongs to non-residents and which is estimated by adjusting the value of imports at c.i.f. parity to the value of imports f.o.b.

Income from services rendered to foreign travellers and tourists, as well as expenditures incurred by domestic travellers and tourists abroad are shown under the position Travel. In the 1993-1998 period, this position was assessed by using various data sources which did not provide for a full coverage in accordance with the recommended methodology. Accordingly, in the second half of 1998, the Croatian National Bank started to carry out the Survey on Consumption of Foreign Travellers in Croatia and Domestic Travellers Abroad and use its results for compiling the Travel position. Since early 1999, the results of this Survey, based on carrying out a survey of travellers (stratified sample) at border crossings, have been combined with the Ministry of the Interior data on total number of foreign and domestic travellers, along with the data on distribution of foreign travellers by

countries contained in the CBS Report on tourism, in order to assess the corresponding balance of payment items.

Other services position is complied by using different data sources: apart from income and expenditures related to insurance and communication services, which have been determined by the CNB special statistical research since 2001, the values of all other services are adopted from the ITRS.

Transactions in the income account are classified into four main groups. Compensation of employees item is compiled on the basis of the ITRS. Income from direct investment, portfolio investment and other investment are reported separately. Data on reinvested earnings are reported separately, under direct investment income, calculated on the basis of the CNB Research on direct and other equity investment. In contrast to data on dividends, these data are not available for the 1993-1996 period, since at that time they were not reported separately. On the basis of statistical data on external debt relations, starting from 1997, income from direct investment includes data on interest arising from credit relations between residents and non-residents directly related through ownership. Income from equity portfolio investment is compiled on the basis of the same research, whereas data on debt portfolio investment income have been compiled since 1999, based on income reported in statistics on foreign credit relations, which also encompass payments related to debt securities owned by non-residents. Income from other investments includes all payments and collections of interest in accordance with the foreign credit relations statistics.

Current transfers are reported separately for the general government sector and other sectors. The ITRS is used as the main data source on current transfers for both sectors. In addition to taxes and excise duties, pensions, monetary support and donations, which are included in current transfers of both sectors, the government sector also encompasses data on multilateral co-operation, whereas other sectors include data on workers' remittances. Current transfers of the general government sector also include data on exports and imports of goods without a payment obligation, provided by the CBS. In the 1993-1998 period, current transfers of other sectors also encom-

^a Preliminary data.

passed an estimate of unregistered foreign currency remittances, which accounted for 15% of the positive difference between unclassified inflows and outflows of the household sector. From 1993 to the second quarter of 1996, the CNB also assessed a portion of the outflow based on current transfers. Since 2002, inflows and outflows based on current transfers of other sectors are supplemented by the data of the CNB special statistical research on international transactions related to insurance services.

Capital account is compiled on the basis of the ITRS, particularly on their part related to transfers of migrants. In addition, capital account includes transfers that cannot be classified into current transfers, such as allocation of gold of the former SFRY or investments in patents and rights.

Foreign direct investments include equity capital, reinvested earnings and debt relations between ownership-related residents and non-residents. Direct investments are investments whereby a foreign owner acquires a minimum of 10% interest in equity capital of a company, regardless of whether a resident invests abroad or a non-resident invests in Croatian residents. The CNB Research on foreign direct investments started in 1997 when companies included in the survey also delivered data on direct investments for the 1993-1996 period. For the same period, no data are available on reinvested earnings and other capital under direct investment position, where all debt relations between related residents and non-residents are classified (excluding the banking sector). Such data actually became available only after the stated research has been launched. Since 1999 data on debt relations within direct investments have been collected on the basis of external debt relations statistics.

Data on equity portfolio investments are collected from the same data source as the data on direct investments. Debt portfolio investments include all investments in short-term and long-term debt securities that cannot be classified under direct investments. In the 1997-1998 period, these data were collected through the CNB Research on direct and portfolio investments, and since 1999 data on external debt relations and monetary statistics data for bank investment have been used. Starting from 2002 and 2004, this position has

also been compiled for investment funds and pension funds, respectively.

Other investment encompasses all other debt investments that have not been mentioned, apart from investment constituting reserve assets. Other investments are classified by instruments, maturity and sectors. Trade credits, in the 1996-2002 period, included the CNB estimates of advance payment and deferred payments, made on the basis of the sample of the largest and large importers and exporters. Data on advance payments have been estimated since 1996, while data on short-term deferred payments (first up to 90 days, then up to 150 days, and today from 8 days to 1 year) have been collected since 1999. In 2003 this research was replaced by a new one, where the selected companies, regardless of their size (stratified sample), are obliged to submit data. Data on deferred payments with the original maturity of more than one year are adopted from the CNB foreign credit relations statistics. Credits granted by residents to non-residents, i.e. foreign loans utilised by residents and granted by non-residents, which cannot be classified into direct investments or trade credits, are classified by the institutional sector and maturity under the corresponding positions of other investment. The CNB foreign credit relations statistics represent the data source for these positions. Currency and deposit position shows residents' claims on foreign countries for foreign cash and deposits with foreign banks, as well as obligations of the Croatian banks for deposits owned by non-residents. Monetary statistics represent a data source for the general government sector and banks sector. Data on balance and currency structure of foreign assets and liabilities, contained in monetary statistics, are used to assess transactions from which the exchange rate effect was eliminated. In the 1993-1998 period, data on other sectors' claims under this position were compiled on the basis of the CNB estimate of a portion of net foreign currency inflows of the household sector which is not classified under current transfers. Since 1999 this position has included only the data based on the Bank for International Settlement quarterly data, while data in the fourth quarter of 2001 and in the first two quarters of 2002 relate to the effect of the EMU countries' currencies changeover to the euro.

^a Preliminary data.

In the period from 1993 to 1998, the estimate of reserve assets transactions was made by converting the changes in the original currencies into the US dollars by applying the average monthly exchange

rate of the currencies contained in the reserves. Since 1999 the changes in reserve assets balance have been calculated on the basis of the CNB accounting data.

^a Preliminary data.

Table H7: International Reserves and Banks' Foreign Exchange Reserves

The international reserves of the Croatian National Bank are shown according to the methodology contained in the Balance of Payments Manual (International Monetary Fund, 1993), and include those foreign claims of the Croatian National Bank that can be used to bridge imbalances in international payments. International reserves

include special drawing rights, reserve position in the International Monetary Fund, gold, foreign currency and deposits with foreign banks, as well as bonds and debt instruments.

The foreign exchange reserves of banks include foreign currency and domestic banks' deposits with foreign banks. These foreign exchange reserves represent an additional source of liquidity for bridging imbalances in international payments.

Table H8: International Reserves and Foreign Currency Liquidity

International reserves and foreign currency liquidity are shown in accordance with a Template on international reserves and foreign currency liquidity, drawn up by the IMF. A detailed explanation of the Template is given in "International Reserves and Foreign Currency Liquidity — Guidelines for a Data Template, 2001".

The first part of the Template shows total assets of the Croatian National Bank in convertible foreign currency. Official reserve assets (I.A.) show those types of assets that are readily available to the CNB at any moment for bridging imbalances in international payments. Official international reserves include: short-term foreign negotiable debt securities, foreign cash, foreign currency sight deposits, foreign currency time deposits which can be withdrawn before maturity, foreign currency time deposits with a remaining maturity of up to 1 year, reserve position with the IMF, special drawing rights, gold, and reverse repos with foreign negotiable debt securities.

The second part of the Template shows fixed predetermined foreign currency net liabilities of the Croatian National Bank and the central government (excluding central government funds) that fall due in the next 12 months. Foreign currency loans, securities and deposits (II.1.) include future interest payments on banks' foreign currency reserve requirements with the CNB (only interest payments for the next month are included), payments of future maturities of foreign currency CNB bills, future principal and interest payments on loans from the IMF, and future principal and interest payments on the central government's foreign currency debts (excluding central government funds). Aggregate short and long positions in forwards and futures in foreign currencies (II.2.) include future collections (+) or payments (-) arising from currency swaps between the CNB and domestic banks (temporary sale or purchase of foreign currency). Item Other (II.3.) includes future payments arising from repo agreements

with foreign negotiable debt securities.

The third part of the Template shows predetermined contingent foreign currency net liabilities of the Croatian National Bank and the central government (excluding central government funds), which fall due in the following 12 months. Contingent liabilities in foreign currency (III.1.) include future principal and interest payments on foreign loans guaranteed by the central government, and banks' foreign currency reserve requirements. (The inclusion of reserve requirements in foreign currency is based on the assumption that there will be no changes in ratios or in the base of foreign currency reserve requirements, which comprises foreign exchange sources of funds, including ordinary foreign exchange accounts, special foreign exchange accounts, sight foreign exchange accounts and savings deposits, received foreign exchange deposits and received foreign exchange loans, as well as obligations arising from securities issued in foreign exchange (excluding the bank's equity securities) and hybrid and subordinated instruments). Undrawn credit lines show potential inflows (+) or outflows (-) which would arise from drawdowns under these credits.

The fourth part of the Template lists memo items. Short-term, domestic currency debt indexed to foreign currency (IV.a) shows obligations arising from the Act on Converting Households' Foreign Exchange Deposits into the Public Debt of the Republic of Croatia, which fall due in the next 12 months. Pledged assets (IV.c) show time deposits in foreign currency with a maturity over 3 months listed in item I.B. which are also a pledge. Repo transactions with securities show the value of collateral that is the subject of repo agreements and reverse repo transactions with securities as well as how these transactions are registered in the Template. Until December 2000, the currency structure of international and other foreign currency reserves showed the currency structure of the total foreign currency assets of the CNB (section I.). From January 2001, the currency structure refers to official reserve assets (section I.A).

a Preliminary data

Note: From 1 January 2001, the euro-zone related price series includes Greece as well

Table H11: Indices of the Effective Exchange Rate of the Kuna

The index of the nominal effective exchange rate of the kuna is a weighted geometric average of the index of bilateral nominal exchange rates of the kuna against the euro, US dollar, Swiss franc, pound sterling and Slovenian tolar. The series of the indices of the effective exchange rate of the kuna, calculated in accordance with the modified CNB methodology for calculating the nominal and real effective kuna exchange rate (for the basic CNB methodology, see Bulletin No. 64, Box: 2, October 2001), were first published in the CNB Bulletin No. 94 (June 2004). The weights are determined based on the average share of a particular foreign currency in the structure of the current account - ITRS data between January 2000 and December 2003 (between July 1996 and January 2000 in the previous version of notes on methodology under Table H10). The new weights have been assigned to the euro (70.6%), US dollar (27.2%), Swiss franc (1.0%) and pound sterling (1.0%) and thus replaced the old weights: euro (66.2%), US dollar (30.7%), Swiss franc (1.6%) and pound sterling (1.2%). The weight assigned to the Slovenian tolar remained unchanged at 0.2%. The year 2001 is a base period for calculating the indices of the effective exchange rate of the kuna (1995 in the previous version of notes on methodology under Table H10). The index of the nominal effective exchange rate is an aggregate indicator of the average value of the domestic currency against a basket of currencies. An increase in the index of the nominal effective exchange rate of the kuna in a certain period indicates that the kuna has depreciated against the basket of currencies, and vice versa. The index of the real effective exchange rate is a weighted geometric average of the index of bilateral exchange rates of the kuna adjusted for the relevant relative price indices (the ratio of price indices in partner countries and domestic prices). Producer price and consumer price indices, and the total harmonized consumer price index for the eurozone countries are used as deflators. The time series for consumer prices in Croatia is constructed in the following manner: retail price indices are used until December 1997 inclusive, and consumer price indices are used as of January 1998. Data for the last two months are preliminary. The historical data may be corrected for the subsequent changes in the data published by the statistical offices of the countries whose prices are included in the calculation of the index of the real effective exchange rate of the kuna.

Table H12: Gross External Debt by Domestic Sectors

External debt is defined as the external debt liabilities of residents on the basis of debt securities issued in foreign markets (at face value), credits (repo agreements included) regardless of their contractual maturity, deposits of non-residents, and trade credits granted by non-residents with contractual maturity of more than 180 days (90 days up to 11 July 2001 and 150 days up to 31 December 2002).

External debt by domestic sectors is shown in the same manner as in the Capital and Financial Account of the BOP. Item Government shows external debt of the general government, which includes the Republic of Croatia, central government funds (including the Croatian Bank for Reconstruction and Development, the State Agency for Deposit Insurance and Bank Rehabilitation, the Croatian Roads and the Croatian Highways), and local government. Item Croatian National Bank shows the central bank debts. Item Banks shows debts of banks. Item Other sectors shows debts of other banking institu-

tions, non-banking financial institutions, enterprises, non-profit institutions and households, including craftsmen. Item Direct investment shows borrower – lender transactions of other sectors that are interrelated by ownership (borrower or lender owns more than 10 percent of the other).

Each sector data are further shown by contractual maturity (short-term and long-term) and by debt instrument. From the beginning of 2004, instruments included in item Currency and deposits (3. Banks) are reported in accordance with their maturity. Data for the previous periods are reported only on a long-term basis.

Outstanding gross external debt includes principal and interest arrears, as well as accrual interest and future principal payments.

Outstanding debt data are shown at the CNB's midpoint exchange rate at the end of the period.

Data are considered preliminary until after publication of the final BOP data for the reporting quarter.

Table H13: Public Sector Gross External Debt, and Publicly Guaranteed and Non-Publicly Guaranteed Private Sector Gross External Debt

The gross external debt position presented in this Table highlights the role of the public sector.

Public sector includes the general government (including the Republic of Croatia, central government funds and local government), the central bank, public enterprises and mixed ownership companies. Public enterprises are defined as enterprises in 100% ownership of business entities from the public sector. Mixed ownership companies

are defined as companies in which business entities from the public sector have a share larger than 50%.

Publicly guaranteed private sector gross external debt is defined as the external debt liabilities of business entities not covered by the definition of the public sector, the servicing of which is guaranteed by a business entity from the public sector.

Non-publicly guaranteed private sector gross external debt is defined as the external debt liabilities of business entities not covered by the definition of the public sector, the servicing of which is not guaranteed by the public sector.

Items are valued in the same manner as in Table H12.

Table H14: Gross External Debt by Domestic Sectors and Projected Future Payments

The Table shows outstanding gross external debt, projected principal payments and estimated interest payments according to the CNB's midpoint exchange rate at the end of the period.

Principal payments on Currency and deposits of non-residents are projected according to the available monetary statistics data on original and remaining maturity.

Estimated interest payments do not include interest on deposits from non-residents, repo transactions and hybrid and subordinated instruments, as well as late interest on these instruments. Future interest payments are estimated at the interest rates at the contracting time and do not reflect changes of variable interest rates.

Projected payments of accrual interest, which are an integral part of the gross external debt, increase the projected principal payments in the first quarter period and, consequently, decrease the interest payments estimated for the same period.

^a Preliminary data

Table H15: International Investment Position - Summary

This table is made in accordance with the recommendations of the IMF (Balance of Payments Manual, Fifth Edition, 1993). Data sources include: reports from banks, enterprises, the Croatian National Bank, and the Zagreb Stock Exchange.

Data on international investments of the Republic of Croatia and international investments into the Republic of Croatia are recorded in euros (EUR) and US dollars (USD). Depending on the sources of data available, the conversion of values from the original currencies into the reporting currencies is performed:

- by applying the current rate of exchange or the average monthly midpoint exchange rate of the Croatian National Bank to transactions:
- by applying the midpoint exchange rate of the Croatian National Bank on the reporting date to balances.

The source of data on foreign direct and portfolio equity investment is the statistical research of the Croatian National Bank. The equity investments have been monitored since the beginning of 2001 and are corrected for changes in the official index of the Zagreb Stock Exchange (CROBEX).

Portfolio debt investment and other investment are classified according to the following institutional sectors: the Croatian National Bank, government, banks and other sectors. The government sector comprises central government and funds and local government authorities. The banking sector comprises banks.

Item Portfolio debt investment - Assets and liabilities comprises data on investments of residents into debt securities issued by

non-residents (assets) and investments of non-residents into debt securities issued by residents (liabilities). The source of data is the register of foreign credit relations kept by the Croatian National Bank, which also comprises claims and liabilities arising from bonds and money market instruments.

Item Other investment – Trade credits – Assets and liabilities comprises foreign claims and foreign liabilities of the said sectors arising from trade credits. The source of data is the register of foreign credit relations kept by the Croatian National Bank.

Item Other investment – Loans – Assets and liabilities comprises data on loans granted and received between residents and non-residents classified according to institutional sectors. The source of data is the register of foreign credit relations kept by the Croatian National Bank.

Item Other investment – Currency and deposits – Assets shows the total liquid foreign exchange of banks authorized to do business abroad reduced by the amount of foreign exchange deposited by banks with the CNB in fulfilment of a part of their reserve requirements. In addition to banks' foreign claims, foreign claims of the government sector are also shown. The sources of data are reports from the government and banks.

Item Other investment – Currency and deposits – Liabilities shows the total foreign exchange and kuna liabilities of the said sectors abroad arising from current accounts, time and notice deposits, sight deposits and demand deposits. The sources of data for this item are reports from banks.

Item International reserves of the CNB is compiled on the basis of the CNB Accounting Department reports which contain data on their balances and changes.

^a Irrespective of the note under the heading "Classification and presentation of data on claims and liabilities", the debt of the Croatian Roads, the Croatian Highways and the State Agency for Deposit Insurance and Bank Rehabilitation, presented in this table under headings 2. External debt of central government and 1. Domestic debt of central government, was reclassified from the sub-sector of the Republic of Croatia to the sub-sector central government funds in December 1998 and December 2002 respectively.

Table I3: Central Government Debt

Data on the central government debt are gathered from available data and are not reconciled with the Ministry of Finance of the Republic of Croatia. The central government debt consists of domestic and external debt. The sources of data on domestic debt of the central government are the following: the Ministry of Finance Monthly Sta-

tistical Review, Monetary Authorities Accounts and Banks' Accounts. The source of data on the central government external debt is the external debt statistics collected by the CNB. The supplement provides data on the central government guaranteed debt. Banks are the source of data on guarantees for domestic debt, while the external debt statistics collected by the CNB are the source of data on guarantees for external debt.

^a Data from January 1992 to December 1997 relate to the retail price index. ^b Data from January 1992 to December 1998 relate to the retail price index.

Table J1: Consumer Price and Producer Price Indices

The Central Bureau of Statistics (CBS) introduced the consumer price index (CPI) in early 2004. This indicator of price movements was compiled in accordance with the methodological principles laid down by the ILO and Eurostat. In its First Release, issued on 17 February 2004, the CBS published the data on movements in the CPI in January 2004 and the time series for the CPI as of January 2001. The CBS subsequently constructed the time series for the consumer price

index encompassing the period from January 1998 to December 2000. As expected following the introduction of the new index, the CBS has stopped publishing the retail price index (RPI) and the cost of living index whose calculation methodologies have not been adequately harmonised with internationally accepted standards. The main characteristic of the CPI are discussed in Box 1 in the CNB Bulletin No. 91 (2004). The data on the average year-on-year consumer price inflation rate are shown in the Bulletin table on Economic Indicators.

Table J2: Core Consumer Price Indices

The Central Bureau of Statistics calculates the core consumer price index in the manner that agricultural products prices and administrative prices (which among others include the prices of electricity and refined petroleum products) are excluded from the basket of goods and services used in the calculation of the total consumer price index. A total of 111 goods and services are excluded and their share in the consumer price basket stood at 30.06% in 2005 (of which: agricultural products accounted for 6.93 percentage points, and administrative prices for 23.13 percentage points). The zero weighting method is used to exclude the prices of goods and services.

Table J4: Consumer Confidence Index, Consumer Expectations Index and Consumer Sentiment Index

The CNB Consumer Confidence Survey has been carried out regularly since April 1999 in accordance with the methodology of the European Commission, the Joint Harmonised EU Programme of Business and Consumer Surveys. Until April 2005 the CNB conducted the survey once a quarter (in January, April, July and October). As of May 2005 the CNB carries out the survey in monthly frequency in co-operation with the European Commission, using its technical and financial assistance. The Croatian National Bank bears sole responsibility for the creation and conduct of the survey.

The questionnaire contains 23 questions, examining consumer perception of the changes as regards every-day economic issues. The value of the response index is determined in line with the set methodology, based on the responses to the questions from the Consumer Confidence Survey. The movements of three composite indices, consumer confidence index (CCI), consumer sentiment index (CSI) and consumer expectations index (CEI), are calculated and monitored based on the value of the response indices. Each of the said composite indices is calculated as the arithmetic average of the response indices (*I*), i.e. as the average of previously quantified responses to individual questions from the survey:

$$I_i = \sum_{i=1}^{k} r_i \cdot w_i$$

where: r is the value of the response, w is the share of respondents opting for a particular response (weight), i question from the ques-

tionnaire, z is the offered/chosen response, k is the number of offered responses to a particular question.

The value of the said indices ranges $-100 < I_i < 100$. Higher index values than those recorded over the previous period point to an increase in expectations (optimism) as regards the specific segment covered by the particular question.

The table shows the values of chosen response indices for the following questions:

I1: How has the financial situation of your household changed over the last 12 months?

12: How do you expect the financial position of your household to change over the next 12 months?

13: How do you think the general economic situation in Croatia has changed over the past 12 months?

14: How do you expect the general economic situation in Croatia to develop over the next 12 months?

17: How do you expect the number of people unemployed in Croatia to change over the next 12 months?

18: In view of the general economic situation, do you think now is the right moment for people to make major purchases such as furniture, electrical/electronic devices, etc.?

I11: Over the next 12 months, how likely is it that you will save any money?

The components of composite indices are as follows:

CCI: I2, I4, I7×(-1), I11

CEI: I2, I4

CSI: I1, I3, I8

List of Banks & Savings Banks

1 February 2006

Licensed Banks

- 1. Banka Brod d.d., Slavonski Brod
- 2. Banka Kovanica d.d., Varaždin
- 3. Banka Sonic d.d., Zagreb
- 4. Banka Splitsko-Dalmatinska d.d., Split
- 5. Centar banka d.d., Zagreb
- 6. Credo banka d.d., Split
- 7. Croatia banka d.d., Zagreb
- 8. Erste & Steiermärkische Bank d.d., Rijeka
- 9. Gospodarsko kreditna banka d.d., Zagreb
- 10. Hrvatska poštanska banka d.d., Zagreb
- 11. HVB Splitska banka d.d., Split
- 12. Hypo Alpe-Adria-Bank d.d., Zagreb
- 13. Imex banka d.d., Split
- 14. Istarska kreditna banka Umag d.d., Umag
- 15. Jadranska banka d.d., Šibenik
- 16. Karlovačka banka d.d., Karlovac
- 17. Kreditna banka Zagreb d.d., Zagreb
- 18. Kvarner banka d.d., Rijeka
- 19. Međimurska banka d.d., Čakovec
- 20. Nava banka d.d., Zagreb
- 21. OTP banka Hrvatska d.d., Zadar
- 22. Partner banka d.d., Zagreb
- 23. Podravska banka d.d., Koprivnica
- 24. Požeška banka d.d., Požega
- 25. Primorska banka d.d, Rijeka
- 26. Privredna banka Zagreb d.d., Zagreb
- 27. Raiffeisenbank Austria d.d., Zagreb
- 28. Samoborska banka d.d., Samobor
- 29. Slatinska banka d.d., Slatina
