 <sup>&</sup>lt;sup>a</sup> The population estimate of the Republic of Croatia for 2000 is based on the 2001 Census and that for the 2001 – 2020 period on the 2011 Census. Population estimates in 2021 and 2022 were calculated on the basis of the 2021 Census. Data for 2022 are preliminary.
 <sup>b</sup> The GDP data are presented according to the ESA 2010 methodology. Data relating to the period before 1 January 2023 have been converted into euros at fixed exchange rate (1 euro = 7.53450 kuna). Data for 2020, 2021 and 2022 are preliminary.

<sup>(1</sup> euro = 7.50-90 km/s). Data for 2020, 2021 and 2022 are preinfinary.

Balance of payments and external debt data are compiled in accordance with the methodology prescribed by the sixth edition of the Balance of Payments and International Investment Position Manual (BPM6) and the new sector classification of institutional units in line with ESA 2010. Balance of payments and external debt data are based on the most recent available balance of payments data up to the first quarter of 2023 and data on the gross external debt position as at the end of March 2023.

Includes principal payments on bonds, long-term trade credits and long-term loans (excluding liabilities to affiliated enterprises), as well as total interest payments (including FISIM), without interest payments on direct investment.

Fiscal data is shown according to the ESA 2010 methodology.
 Average long-term government bond yield with a remaining maturity of about 10 years

Data on the unemployment rate and the employment rate are based on the latest available data ending with the third quarter of 2022. Data for the 2007 – 2013 period are revised and therefore no longer comparable to data for the 2000 – 2006 period.

Information on economic, financial and monetary developments

CNB BULLETIN • NUMBER 285

## Summary

Having edged up in the second quarter, the euro area economy started showing signs of slowing down over the summer. Economic activity in the euro area grew by 0.3% in the second quarter of 2023 from the quarter before, in line with expectations. The intensity of growth was in part related to the operations of foreign enterprises registered in Ireland and a temporary increase in the exports of ships from France. In most other countries, economic activity either stagnated or recorded very low positive growth rates, while in some countries, such as Italy and the Netherlands, it decelerated noticeably. Most of the growth in real activity still comes from the services sector, with manufacturing industry lagging behind considerably. According to available estimates, economic activity might moderate further in the third quarter (Figure 1)¹. High-frequency indicators, such

Notes: Abbreviation ECB – June refers to ECB June projections of real growth in the euro area (Broad Macroeconomic Projection Exercise, BMPE). Abbreviations SMA (Survey of Monetary Analysts) and SPF (Survey of Professional Forecasters) refer to the results of the ECB survey of market participants in July.

Sources: Eurostat and ECB

as the purchasing manager index, signal further slowdown in the services sector and its contraction in August. Despite a slight recovery in the purchasing manager index in August, manufacturing has been in contractionary territory for a while now. Amid subdued real activity, consumer price inflation in the euro area continued its downward trend in July, while in August the decline halted at 5.3% due to a rebound in energy prices (Figure 2). The annual growth of the prices of industrial products (excluding energy) and food products continued to slow down. However, the rise in the prices of services, particularly of transport and tourist services, has shown no visible signs of weakening. Consequently, core inflation (excluding food and energy), went down only marginally to 5.3% in August, which indicates the persistence of inflationary pressures. Although there are still marked differences among inflation rates across euro area member states, these differences have continued to shrink.

According to the first CBS estimates, real GDP in Croatia continued its relatively steady upward trend in the second quarter of 2023, at the pace seen at the beginning of the year. Economic activity went up by 1.1% in the second quarter from the quarter before, growing by 2.7% from the same period of the previous year. On the demand side, this growth was mostly fuelled by personal consumption and exports of services, which may be associated with continued favourable developments in the labour market, the recovery in real income and a strong inflow of foreign tourists. Developments in other components were relatively subdued. Goods exports decreased. However, given that the goods imports also declined considerably, the influence of trade in goods was relatively neutral. In addition, government consumption and investments edged down from the previous quarter. The drop in investments can partly be associated with weaker public investment relative to the levels recorded at the beginning of the year, as evident from the trends in civil engineering works. Economic activity continued its upward pace on a quarterly level in most activities (excluding construction and agriculture), following unfavourable trends

<sup>1</sup> In addition to figures shown in the Information on economic, financial and monetary developments, there is an additional group of figures and relevant data from which they were derived. These figures and time series are shown in an Excel datafile Annex: Figures and tables

CNB BULLETIN • NUMBER 285

in many activities in the second half of 2022. Financial activities recorded a sharp growth, probably due to the rise in the net interest margins of banks, which also include income of banks

Note: Data refer to July and the first twenty days of August.

from overnight deposits with the CNB.

With regard to trends in the third quarter of 2023, the CNB's nowcasting model of economic activity, which currently draws on a relatively small number of available data, mostly for July, indicates that real GDP edged down from the quarter before, which might lead to a slowdown in the annual growth rate to 2.5% (Figure 3). Industrial production decreased noticeably in July from the levels recorded in the previous quarter. The production of energy and non-durable consumer goods decreased, while the production of intermediate goods, capital goods and durable consumer goods increased. In addition, available data for July and August suggest a small decrease in the number of tourist nights from the year before (Figure 4), while retail trade held steady in July, at the average level recorded in the previous quarter. Consumer and business confidence indicators for July and August mostly point to unfavourable trends, with the exception of the construction sector, while a particularly strong deterioration in optimism was

Figure 5 Inflation indicators in Croatia 14 12 percentage 10 8 6 4 2 0 -2 2019 2023 2020 Services Industrial products Core inflation - HICP (%) Overall inflation - CPI (%) Overall inflation - HICP (%) Notes: Core inflation is measured by the harmonised index of consumer prices that

Sources: Eurostat and CNB calculations

recorded in industry and services, in which the levels came close to their long-term average.

According to the first Eurostat estimate, inflation measured by the harmonised index of consumer prices accelerated in August to 8.5% (from 8.0% in July) due to the rise in energy prices, while core inflation, including only the prices of industrial products and services, decreased from 9.5% to 9.2%. The prices of Brent crude oil (in USD) on the global market started trending up in mid-July under the influence of supply cuts from OPEC+ countries and grew by around 8% in August. This triggered a rise in retail prices of petroleum products in the domestic market, and so the annual rate of change in energy prices was higher in August than in July (1.6% compared with -5.8%). Unlike energy prices, the annual growth in the prices of all other main inflation components decelerated from July to August, even though it still remained high (Figure 5). Against the backdrop of lower prices of raw materials in the global market (Figure 7), normalisation of supply chains and appreciation of the euro in nominal effective terms, food price inflation (including alcohol and tobacco) dropped to 10.3% (from 11.8% in July), while inflation in industrial products fell to 7.0% (from 7.7% in July). In addition, the decline in inflation in food and industrial products is largely also due to the positive effect of the base period, associated with the surge in the prices of these goods in 2022. Services inflation edged down from 10.8% in July to 10.7% in August. The factors influencing the persistently elevated prices of services, particularly catering and accommodation services, include a sizeable wage growth and the spillover of the past increase in input costs caused by the rise in the prices of energy and food amid strong demand of foreign visitors for tourist services. Furthermore, the short-term indicators of energy and services inflation (Figure 6) increased markedly in August, which resulted in a rise in the momentum of overall and core inflation for the fourth consecutive month. According to the CNB's macroeconomic projections, the acceleration of total annual inflation in August should be temporary, and the slowdown in inflation, begun in end-2022, should continue.

Key ECB interest rates were raised by a further 25 basis points at the meeting of the Governing Council on 27 July. The interest rate on monetary deposits of credit institutions with the central bank (currently a relevant indicator of the ECB's monetary policy) has been set at 3.75% starting from 2 August. The Governing Council also decided to set the remuneration

of minimum reserves at 0% instead of deposit facility rate. The change will become effective as of the beginning of the reserve maintenance period starting on 20 September 2023. The decision to reduce the remuneration on minimum reserves will preserve the effectiveness of monetary policy by maintaining the current degree of control over the monetary policy stance and ensuring the full pass-through of the Governing Council's interest rate decisions to money markets. At the same time, it will improve the efficiency of monetary policy by reducing the overall amount of interest that needs to be paid to banks in order to implement the appropriate monetary policy stance. In addition, after a large repayment in June (of around EUR 500bn), banks have continued repaying the smaller amounts under the targeted longer-term refinancing operations (TLTRO), which

considerably reduced the Eurosystem balance sheet (Figure 9) as well as surplus liquidity in the banking system. The asset purchase programme (APP) is declining at a measured and predictable pace, given that from July 2023 the Eurosystem no longer reinvests the principal payments from maturing securities. As concerns the pandemic emergency purchase programme (PEPP), the Governing Council intends to reinvest the principal payments from maturing securities purchased under the programme until at least the end of 2024.

The rise in key ECB interest rates by additional 25 basis points immediately spilled over to money market interest rates, while government bond yields have been stable for quite some time now. After the last decision of the Governing Council came into force in early August, the overnight interest rate on the

European money market, €STR, closely followed the increase in key interest rates (a rise by 25 basis points) and reached 3.7%, remaining at that level until the end of the month (Figure 11). The three-month EURIBOR continued to rise gradually, reflecting the risk of an additional increase in key interest rates, and reached 3.8% at the end of August. The increase in key ECB interest rates spilled over quickly to the Croatian money market. Thus the overnight interest rate on banks' demand deposits trading rose by 20 basis points in August, standing at 3.4% at the end of that month. As regards short-term government financing costs, only 182-day T-bills were placed at the auction of T-bills of the Ministry of Finance in August, while bids for the subscription of 346-day T-bills were fully rejected. Yield at issue of 182-day T-bills stood at 3.20% and remained unchanged from the last auction held in May. As in the previous few months, yields on long-term government bonds were stable in August and remained almost unchanged in late August from the levels recorded at end-July (Figure 10). The euro area GDPweighted average of long-term government bond yields stood at 3.1% at the end of August, with the yield on long-term Croatian bonds standing at 3.8%.

Notes: CEE – countries of Central and Eastern Europe (the Czech Republic, Hungary, Poland and Romania); yields for the euro area and CEE have been weighted by the share of GDP of the countries included. Data from the euro area do not include those from Estonia, Latvia, Luxembourg and Malta. The red dotted lines denote ECB Governing Council meetings in June and July.

CNB BULLETIN • NUMBER 285

Figure 13 Corporate and household loans and deposits

corporates in July was largely due to the decrease in the share

Interest rates of Croatian banks continued their gradual upward trend due to further tightening of the ECB's monetary policy, even though some differences across sectors and instruments persist.<sup>2</sup> Households borrowed at somewhat higher interest rates in July than in June, especially for house purchases. The interest rate on pure new housing loans increased by 20 basis points from June to July and stood at 3.27%, with the noticeable influence of smaller amounts of pure new housing loans granted under the government subsidy programme (usually made at lower interest rates than the market average) relative to the levels recorded in recent months. The interest rate on pure new general-purpose cash loans remained almost unchanged and stood at 5.84% in July. In the non-financial corporations sector, the average interest rate on pure new loans amounted to 4.77% in July, down by 20 basis points from 4.97% in June (Figure 12). The fall in the interest rate on pure new loans to

corporates in July was largely due to the decrease in the share of syndicated loans (granted at relatively high interest rates) in total financing, with a simultaneous increase in the share of loans granted at relatively low interest rates (working capital loans). If the impact of these instruments is excluded, July also saw a rise in the borrowing costs of corporates. When sources of bank financing are observed, the rise in key ECB interest rates also affected the interest rates on deposits, especially in the corporate sector – the interest rate on pure new time deposits of corporates stood at 2.73% in July, up by 25 basis points from June. Over the same period, the interest rate on total pure new household time deposits reached 1.18%, down by 24 basis points from June. The higher interest rate in June was due to the one-off effect of a large short-term time deposit in one bank, carrying a much higher interest rate than the average interest rate. If this effect is excluded, the interest rate on pure new time deposits of households in July remained almost the same as in June.

Despite the steady increase in banks' interest rates on loans, lending activity remained robust in the household sector, while corporate lending was subdued. As regards household loans, general-purpose cash loans and housing loans grew from 6.3% and 9.2% in June to 6.8% and 9.5% in July (transaction-based) respectively, year-on-year. This was due to the new round of the government housing loan subsidy programme. Lending activity in the non-financial corporations sector was subdued in July, while the growth in loans to this sector continued to slow down on an annual level, from 13.5% in June to 10.8% in July, which reflects the effect of the base period, that is, the very strong increase in loans granted to corporates in July last year. The effect of the base period is also mirrored in the deceleration of the annual growth in domestic deposits (from 5.8% to 5.2%) as a result of considerable corporate borrowing following the growth in the prices of raw materials and energy products in mid-2022, as well as stronger inflow of cash to banks on the eve of the euro introduction. Broken down by sector, deposits of non-financial corporations and households slowed down their growth on an annual basis, from 8.2% and 7.4% in June to 5.4% and 7.2% in July, respectively (Figure 13).

<sup>2</sup> For more information on the differences in the pass-through of key ECB interest rates to interest rates on loans and deposits in Croatian banks, see Deskar-Škrbić, Jukić, Lesničar and Zrnc (2023), Koliko je porasta ključnih kamatnih stopa ESB-a preneseno na kamatne stope banaka u Hrvatskoj?, HNBlog, available at https://www.hnb.hr/-/koliko-je-porasta-kljucnih-kamatnih-stopa-esb-a-preneseno-na-kamatne-stope-banaka-u-hrvatskoj

Statistical survey

## Classification and presentation of data on claims and liabilities

The Croatian National Bank uses the ESA 2010 standard for all its official statistics and ESCB statistics, which implies sectoral classification of the reporting units and their counterparties in accordance with the Decision on the statistical classification of institutional sectors, published by the Central Bureau of Statistics (CBS). This classification by sectors is based on the European System of Accounts (ESA 2010), a mandatory statistical standard of the European Union, and is aligned with the basic international statistical standard - the System of National Accounts (SNA 2008). ESA 2010 is applied to external statistics (tables on the balance of payments, international investment position and external debt), general government debt statistics and to monetary statistics.

Data on claims and liabilities are classified according to institutional sectors and financial instruments.

The non-financial corporations sector consists of public non-financial corporations, national private non-financial corporations and foreign controlled non-financial corporations. This sector covers all institutional units which meet the criteria prescribed by the sector classification of institutional units for the relevant subsector. Non-financial corporations consist of institutional units which are independent legal entities and market producers, and whose principal activity is the production of goods and (or) non-financial services.

The major changes relate to the financial corporations sector. The financial corporations sector is subdivided into the following subsectors: monetary financial institutions, other financial corporations, insurance corporations and pension funds.

Monetary financial institutions consist of the central bank and other monetary financial institutions. The central bank is the Croatian National Bank. Other monetary financial institutions consist of deposit-taking corporations except the central bank and money market funds. Deposit-taking corporations except the central bank are credit institutions (banks, savings banks and housing savings banks). Credit institutions are institutions authorised by the Croatian National Bank under the Credit Institutions Act. The credit institutions sector does not include banks undergoing liquidation or bankruptcy proceedings. Money market funds include all financial corporations and quasi-corporations, except those classified in the central bank and in the credit institutions subsector, which are principally engaged in financial intermediation. Their business is to issue investment fund shares or units and make investments primarily in short-term debt instruments, deposits and money market fund shares or units. Their investment objective is to maintain the principal of the fund and generate yield in accordance with interest rates on money market instruments.

Other financial corporations consist of investment funds other than money market funds, other financial intermediaries, financial auxiliaries and captive financial institutions and money

Non-money market investment funds consist of all forms of collective investment schemes, except those classified in the money market funds subsector, which are principally engaged in financial intermediation. Their business is to issue investment fund shares or units which are not close substitutes for deposits and, on their own account, to make investments primarily in long-term financial assets.

Other financial intermediaries are institutions which are principally engaged in financial intermediation by incurring liabilities in forms other than currency, deposits, and close substitutes for deposits. They include leasing companies, factoring corporations, banks undergoing liquidation or bankruptcy proceedings, credit unions, etc.

Financial auxiliaries are institutions which are principally engaged in auxiliary financial activities and include, for instance, stock exchanges, exchange offices, financial regulatory authorities, insurance agents and brokers, investment firms, investment and pension fund management companies, the Central Depository and Clearing Company (CDCC), the Croatian Financial Services Supervisory Agency (HANFA), the Financial Agency (FINA), etc.

Captive financial institutions and money lenders include all financial corporations and quasi-corporations which are neither engaged in financial intermediation nor in providing financial auxiliary services and where most of their assets or their

liabilities are not transacted on open markets. They include in particular: (a) units as legal entities such as trusts, estates, agencies accounts or "brass plate" companies; (b) holding companies that hold controlling levels of equity of a group of subsidiary corporations and whose principal activity is owning the group without administering or managing the group and providing any other service to the businesses in the group; (c) special purpose entities that qualify as institutional units and raise funds in open markets to be used by their parent corporations; (d) units which provide financial services exclusively with own funds, or funds provided by a sponsor and incur the financial risk of the debtor defaulting. Examples are money lenders, corporations engaged in lending to students or for foreign trade from funds received from a sponsor such as a government unit or a non-profit institution, and pawnshops that predominantly engage in lending; (e) special purpose government funds, usually called sovereign wealth funds, if classified as financial corporations.

Insurance corporations consist of all financial corporations and quasi-corporations which are principally engaged in financial intermediation as a consequence of the pooling of risks mainly in the form of direct insurance or reinsurance.

Pension funds consist of all financial corporations and quasi-corporations which are principally engaged in financial intermediation as a consequence of the pooling of social risks and needs of the insured persons (social insurance). Pension funds as social insurance schemes provide income in retirement, and often benefits for death and disability.

The general government sector consists of institutional units which are non-market producers whose output is intended for individual and collective consumption, and are financed by compulsory payments made by units belonging to other sectors, and institutional units principally engaged in the redistribution of national income and wealth.

It consists of the following subsectors: central government, state government, local government and social security funds. The central government consists of state administration bodies (ministries, offices of the Government of the Republic of Croatia, state administration organisations and state administration offices in counties) and Croatian Motorways (from January 2008), Croatian Roads, Croatian Waters, Croatian Radiotelevision, Croatian Railways Infrastructure, Croatian Energy Market Operator (HROTE), Croatian Agency for SMEs, Innovations and Investments (HAMAG Bicro), Croatian Energy Regulatory Agency (HERA), the State Agency for Deposit Insurance and Bank Resolution (DAB) and the Croatian Bank for Reconstruction and Development.

Social security funds include the Croatian Pension Insurance Institute, the Croatian Health Insurance Fund and the Croatian Employment Service. Local government includes units of local and regional self-government and institutional units established and controlled by the local government. There is no state government subsector in the Republic of Croatia.

The households sector primarily consists of individual consumers but also of individual consumers and entrepreneurs (market producers). This sector also includes individuals or groups of individuals as producers of goods and non-financial services for exclusively own final use.

The non-profit institutions serving households sector consists of non-profit institutions which are separate legal entities, which serve households and which are private non-market producers. Their principal resources are voluntary contributions in cash or in kind from households in their capacity as consumers, from payments made by government and from property income.

The rest of the world sector is a grouping of units without any characteristic functions and resources; it consists of non-resident units insofar as they are engaged in transactions with resident institutional units, or have other economic links with resident units. Its accounts provide and overall view of the economic relationships linking the national economy with the rest of the world. The institutions of the EU and international organisations are included. The rest of the world sector includes all foreign natural and legal persons.

From December 2010 on, the sector classification of counterparties in tables of the A-G group is made in accordance with the Decision on the statistical classification of institutional sectors published by the Croatian Bureau of Statistics (CBS). This classification by sectors is based on the European System of Accounts (ESA 2010). The data are based on the reporting system in accordance with the Decision on statistical and prudential reporting.

All data on claims and liabilities in tables A1 to D11 refer to balances at the end of the reporting period, and in tables D1 and D5, also to monthly net transactions. The value of transactions during the reporting period is calculated as the difference between the balance of financial positions at the end of the period (current and previous month) adjusted by the movement in the exchange rate, revaluation and reclassification. Revaluations comprise loans write-offs and price adjustments of securities. Reclassifications cover the changes in the balance sheet balances incurred because of the changes in the composition and structure of monetary financial institutions (e.g. disappearance of a reporting unit from the reporting population because of liquidation or bankruptcy), a change in the classification of financial instruments or changes in statistical definitions.

In tables A1 through D11 and G1 through G6, the household sector also includes non-profit institutions serving households. The tables also include foreign bank branches.

Foreign currency items are reported in their euro equivalent at the CNB's midpoint exchange rate at the end of the reporting period. All items are reported on a gross basis (i.e. before value adjustments).

New tables D also report historical data, according to which the euro is treated as the "domestic currency", i.e., the corresponding kuna and euro positions (including kuna positions with a euro currency clause) are consolidated. Values in the new tables D are reported in the euro, whereas in the tables containing a breakdown by "the domestic currency" and "the foreign currency", the domestic currency in the period until 31 December 2022 includes the kuna, the euro and the kuna with a euro currency clause, and as of 31 January 2023 only the euro. Historical data released in new tables G, as of December 2011, are calculated temporarily on the basis of different methodologies, depending on the type of weight, instrument and counterparty. For the positions that do not contain a note historical data are calculated by merging kuna positions with and without a currency clause and foreign exchange positions (i.e. by merging old tables A, B and C), while the calculation of historical data for other positions is explained in each table.

Table A1 Republic of Croatia contribution to euro area monetary aggregates

end of period, million EUR

Table A1 Republic of Croatia contribution to euro area monetary aggregates • The table shows data on end-of-month balances for the monetary aggregates M1, M2 and M3, calculated according to the definition of the European Central Bank (ECB). The main characteristics of monetary aggregates under the ECB's definition:

- inclusion of liabilities of monetary financial institutions to euro area non-monetary sectors,
- exclusion of the monetary neutral sector (the central government has the status of a monetary neutral sector),
- limited maturity of items included (liabilities of up to 2 years and deposits redeemable at notice of up to 3 months),
- equal treatment of the liabilities in domestic and foreign currency.
- inclusion of money market funds (MMF) shares/units into M3.

The composition of monetary aggregates, as defined by the ECB is:

- M1 contains currency in circulation and overnight deposits,
- M2 includes beside M1 also deposits with agreed maturity of up to 2 years and deposits redeemable at notice of up to 3 months,
- M3 includes M2, repurchase agreements, debt securities with the maturity of up to 2 years and MMF shares/units issued.

The item Currency in circulation is calculated on the basis of the Capital Share Mechanism, which foresees the split of the total amount of issued banknotes in the euro area between the different national central banks of the euro area with respect to their share in the capital of the ECB.

The contribution of the Republic of Croatia to euro area monetary aggregates does not represent the monetary aggregates of the Republic of Croatia. The concept of residency is the one of the euro area. Due to the consolidation within the MFI sector on the level of euro area countries the aggregate M3 could become smaller than M2.

Table C1 Balance sheet of the Croatian National Bank • The table shows data on Croatian National Bank assets and liabilities in line with the methodology of the ECB.

Foreign assets include the following forms of claims on non-residents: gold, claims on the International Monetary Fund (special drawing rights and the reserve position), foreign cash in the vault, loans and deposits with foreign monetary financial institutions (including net claims in TARGET2 accounts and deposits related to international reserves transferred to the ECB), security investments that include the ECB's paid-up capital as well as net claims related to the Eurosystem euro banknote allocation that are claims associated with the application of the banknote allocation key.

Claims on general government are investments in the securities of the Republic of Croatia.

Claims on credit institutions are loans to credit institutions related to monetary policy operations and other claims

comprising the CNB's deposits with credit institutions. Loans also includes all claims arising from monetary policy operations the CNB started before joining the Eurosystem.

Claims on other domestic sectors are loans and other claims on other domestic sectors.

Other assets include non-financial and other assets. Non-financial assets comprise tangible and intangible assets. Other assets comprise financial derivatives, suspense and restricted items, accrued interest and the rest.

Banknotes and coins in circulation (distribution according to the ECB's key) refer to the CNB's share in the total issue of euro banknotes of the Eurosystem and to euro coins issued by the CNB. The total value of euro banknotes is allocated to each central bank of the Eurosystem applying the ECB's subscribed capital key, as envisaged by Decision ECB/2010/29 of 13 December 2010 on the issue of euro banknotes (and subsequent amendments ESB/2022/46). In 2023, this position also

includes kuna banknotes and coins that have not been withdrawn from circulation.

Banknotes and coins in circulation (net) are euro banknotes and euro coins issued into circulation as well as banknotes and coins denominated in kuna that have ceased to be the legal tender, but have remained in circulation in the euro cash changeover year.

Credit institutions' deposits consist of funds in TARGET2 accounts (including the minimum reserve system), overnight deposits as well as other deposits and loans received from credit institutions.

General government deposits are general government current

accounts with the Croatian National Bank.

Deposits of other resident sectors are current accounts as well as other resident sectors' other deposits and loans received with the Croatian National Bank.

Foreign liabilities include non-residents' current accounts and loans received as well as the allocation of International Monetary Fund's special drawing rights.

Capital and reserves include reserves, provisions and income and expense accounts.

Other liabilities comprise financial derivatives, suspense and restricted items, accrued interest and the rest.

## Aggregated balance sheet of other monetary financial institutions

This group of tables covers the basic aggregated balance sheet of other monetary financial institutions and provides a detailed breakdown of relevant asset and liability items of the basic aggregated balance sheet of other monetary financial institutions. Data are based on the regular reports of credit institutions and MMFs.

All data on claims and liabilities in tables D1 to D11 refer to balances at the end of the period and data in tables D1 and D5 also refer to monthly net transactions.

All items are reported on a gross basis (i.e. before value adjustments). The value of transactions during the reporting period is calculated as the difference between the balance of financial positions at the end of the period (current and previous month) adjusted for the movement in the exchange rate, revaluations and reclassifications. Revaluations comprise loans write-offs and securities price adjustments. Reclassifications comprise changes in balance sheet balances incurred due to changes in the composition and structure of the reporting population of monetary

financial institutions (e.g. the disappearance of a reporting unit from the reporting population because of liquidation or bankruptcy), changes in the classification of financial instruments or changes in statistical definitions.

Claims reported by institutional sectors include financial instruments, loans, debt securities, shares and equity holdings as well as investment funds shares/units. Loans also comprise assets in the form of deposits placed by reporting institutions.

Deposits in the tables showing deposits also include loans received and non-transferable debt instruments issued by reporting institutions. Deposits also include subordinated debt in the form of deposits or loans.

Foreign currency items are reported in their euro equivalent at the Croatian National Bank midpoint exchange rate at the end of the reporting period. For the period until January 2022 (i.e. before the Republic of Croatia's entry to the euro area) data in kuna have been converted into euro applying a fixed conversion rate.

Table D5e Other monetary financial institutions' loans to non-financial corporations by non-financial corporation size •

The table shows a breakdown of loans to non-financial corporations from Table D5 by the non-financial corporation size. Micro, small, medium-sized and large non-financial corporations are shown separately. Reported within micro, small, medium-sized and large non-financial corporations are working capital loans, investment loans and other loans, broken down to domestic and foreign currency loans and to short-term and long-term loans by original maturity.

The classification of non-financial corporations according to their size is based on Article 5 of the Accounting Act (Official Gazette 78/2015) and Directive 2013/34/EU of the European Parliament and of the Council. The size of non-financial corporations

is calculated using the last available data from annual financial reports (GFI-POD reports) that non-financial corporations are required to submit regularly to the Financial Agency. The indicators providing a basis for the classification of non-financial corporations include the amount of total assets, the amount of income and the average number of employees in a business year.

All entities that have submitted the GFI-POD report for at least one reporting period stated in the table will be assigned their size, assessed by a specific algorithm. The entities that have not submitted annual financial reports for any reporting period are shown in the category Non-classified.

Data in the table are revised once a year after annual financial reports for the previous business year have been collected.

Note: Starting with January 2023, all data refer only to deposits in euro.

## Table G1 Credit institutions' interest rates on deposits (new busiess) • The table shows the weighted monthly averages of nominal

ness) • The table shows the weighted monthly averages of nominal interest rates and the sums of amounts of new deposit business of credit institutions in the reporting month in the domestic currency. The table presents a further breakdown by household and non-financial corporations' deposits, by instruments and by maturity.

In principle, the basis for the calculation of weighted averages for deposits includes the amounts received during the reporting month (new business), while for overnight deposits the basis for the calculation of weighted averages includes the end-of-month book balances.

New business includes any new contract between the customer and the reporting institution. This means that they cover all financial contracts that specify interest rates on deposits for the first time and all renegotiations of the terms and conditions of existing deposit contracts. When the terms and conditions of existing contracts are being renegotiated the active involvement of the customer in the renegotiations is essential, while any automatic changes to the terms and conditions of the contract by the reporting institution are not considered new business.

Short-term deposits are deposits with original maturity of up to and including one year, while long-term deposits are deposits with original maturity exceeding one year. Overnight deposits are broken down to transaction accounts and savings deposits. Transaction accounts are the accounts through which account holders in the reporting institution settle their payables and collect their receivables.

The reporting institution uses this instrument only for the presentation of funds in accounts with credit balances. Transaction accounts are accounts opened with a reporting institution on the basis of a contract on the opening of such an account. This position also includes restricted deposits, i.e. different temporary (restricted) deposits that can be transferred from current and giro accounts for a specific purpose (e.g. funds set aside pursuant to a court order, funds for international payments, funds for the purchase of foreign currency and securities, brokerage and custodial deposits, coverage for letters of credit, etc.). Savings deposits are deposits without a predetermined date of maturity or period of notice, which the depositor cannot debit by issuing a cashless payment order. Such accounts are primarily intended for savings.

Time deposits are deposits the use of which the depositor renounces for a specific agreed time. Time deposit funds cannot be used for payments. These deposits also include time deposits with an agreed notice period for which a request for the disposal of funds has not been submitted. Deposits redeemable at notice are savings deposits and time deposits for which a request for the disposal of funds has been submitted.

Repos are a counterpart of cash received in exchange for securities sold by reporting institutions at a given price under a firm commitment to repurchase the same (or similar) securities at a fixed price on a specified future date.

a Historical data in this row refer only to loans in euro and in kuna with a euro currency clause.
 Revised data.

Note: Starting with January 2023, all data refer only to loans in euro.

Table G2 Credit institutions' interest rates on loans to households (new business) • The table shows weighted monthly averages of nominal and effective interest rates and the sums of amounts of new lending business of credit institutions with households in the reporting month in the domestic currency. The table presents a further breakdown of loans to households by instruments, by original maturity and by the period of initial interest rate fixation.

The o/w position under loans to households in specific positions in the table includes loans granted to sole proprietors.

In principle, the basis for the calculation of weighted averages for loans are the amounts of loans granted during the reporting month (new business), while for revolving loans, overdrafts on transactions accounts and credit card credit the basis for the calculation of weighted averages are the end-of-month book balances. Only loans classified as risk group A are covered.

New business includes any new contract between the customer and the reporting institution. This means that they cover all financial contracts that specify interest rates on loans for the first time and all renegotiations of the terms and conditions of existing loan contracts. When the terms and conditions of existing contracts are being renegotiated the active involvement of the customer in the renegotiations is essential, while any automatic changes to the terms and conditions of the contract by the reporting institution are not considered new business.

The initial period of interest rate fixation is the period defined as a predetermined period of time at the start of a contract during which the interest rate value cannot change.

Loans with a fixed interest rate are loans whose interest rate is unchangeable during the entire lifetime of a loan.

Short-term loans are loans with original maturity of up to and including one year, while long-term loans are loans with original maturity over one year.

Revolving loans include loans that meet the following conditions: the customer may use or withdraw funds to a pre-approved credit limit without giving prior notice to the reporting institution, the amount of the available loan can increase or decrease as funds are borrowed and repaid, the loan may be used repeatedly. This position excludes revolving loans

provided through credit cards and overdrafts on transaction accounts.

Overdrafts refer to receivables based on used overdrafts on counterparties' transaction accounts.

In addition to the above, the table also shows credit card credit with the collection of interest, which include credit card credit with the card company guarantee.

Receivables on deferred card payments are not shown as a separate item, but are presented within the position Revolving loans, overdrafts and credit card credit.

A convenience credit card is a card in the case of which customers are obliged, without the payment of interest, to settle their liabilities after they receive a notice to that effect from the reporting institution, usually once a month.

Consumer loans are loans granted to households for the purpose of personal use in the consumption of goods and services.

Housing loans include all mortgage and other loans extended for the purchase, construction and completion of flats, for the purchase, construction and completion of buildings with a maximum of four flats or for the renovation of flats, residential facilities or residential buildings (regardless of whether they are granted to an individual borrower or jointly to all tenants of a residential building). Lending for house purchase comprises loans secured on residential property that are used for the purpose of house purchase and, where identifiable, other loans for house purchase made on a personal basis or secured against other forms of assets.

Loans for other purposes include the following types of loans: overnight loans, loans for payments made on the basis of guarantees and similar instruments, reverse repo loans, shares in syndicated loans, financial lease, education loans, mortgage loans, margin loans, Lombard loans, working capital loans, construction loans, agricultural loans, tourism loans, investments loans, export finance loans, general-purpose cash loans, factoring and forfeiting and other loans.

The "o/w" position under other loans specifies the category of general-purpose cash loans broken down by the initial period of interest rate fixation.

The table shows the effective interest rates and amounts of new business for selected loan categories.

Table G3 Credit institutions' interest rates on loans to non-financial corporations (new business)

a Historical data in this row refer only to loans in euro and in kuna with a euro currency clause. Note: Starting with January 2023, all data refer only to loans in euro.

Table G3 Credit institutions' interest rates on loans to non-financial corporations (new business) • The table shows the weighted monthly averages of nominal interest rates and the sums of amounts of new lending business of credit institutions with non-financial corporations in the reporting month in the domestic currency. The table provides a breakdown of loans to non-financial corporations by revolving loans, overdrafts on transaction accounts and credit card credit as well as by the amount of loans granted: loans up to EUR 0.25 million, loans over EUR 0.25 million to EUR 1 million and loans over EUR 1 million.

The amount refers to single loan transactions and not to all business between non-financial corporations and reporting agents. The reason for this is the separation of loans to large corporations from loans to small corporations. Without this division, loans to large corporations would dominate the weighted average interest rate. The types of loans, the basis for the calculation of weighted averages, the definition of new business and the initial period of fixation of the interest rate are explained in notes on methodology under G2 tables.

<sup>&</sup>lt;sup>a</sup> Historical data in this row refer only to loans and deposits in euro and in kuna with a euro currency clause. Note: Starting with January 2023, all data refer only to loans and deposits in euro.

# Table G6 Credit institutions' interest rates on deposits and loans by original maturity (new business)

Data on interest rates and the amounts of new business for the subcategories of loans and deposits from the table are presented in more detail in tables G1 through G3. The table shows the weighted monthly averages of credit institutions' interest rates for the selected aggregated categories of new deposit business (only

for time deposits) and new lending business (for loans other than revolving loans, overdrafts on transaction accounts and credit card receivables and credit) as well as the sums of amounts of new business for these categories of deposits and loans.

The divisions by instrument, counterparty sector, maturity and currency are explained in notes on methodology under tables G1 through G3.

Table G8a Interest rates on MoF treasury bills • Table G8a shows the weighted monthly averages of daily interest rates achieved at auctions of treasury bills of the Ministry of Finance of the Republic of Croatia. Daily interest rates correspond to the single yield at issue attained at auctions of MoF treasury bills.

Annual averages are a simple average of the weighted monthly averages. The weighted monthly averages of daily interest rates are calculated separately for treasury bills denominated in kuna and for treasury bills indexed to euro, and separately for each original contractual maturity (91, 182 or 364 days).

Table G8b Yields to maturity on the bonds of the Republic of Croatia (for selected currencies and maturities) and long-term interest rate (LTIR) • Table G8b shows the average monthly and annual yields to maturity on the bonds of the Republic of Croatia, for selected currencies and maturities, and the long-term interest rate (LTIR).

The average monthly yields to maturity are a simple average of daily yields to maturity.

The average annual yields are a simple average of monthly averages.

Daily yields are calculated for each remaining maturity (rounded to the whole number of years) in such a way that bonds are first grouped according to the remaining maturity, and then a simple average is calculated for each group. The remaining maturity of a bond on a certain day is calculated as a rounded number (interval t-0.5 to t+0.5), assuming a year of 360 days.

The applied methodology differs somewhat depending on the market in which bonds are issued, i.e. the Republic of Croatia or foreign capital markets, and depending on the availability of data for the calculation of yields to maturity.

a) Bonds issued in the domestic capital market

Daily yields to maturity are calculated on the basis of the weighted average of the average trading price attained in all trading segments of the Zagreb Stock Exchange.

Daily yields are also calculated for days when there are no trading transactions, assuming that the most recent average price remains unchanged.

Daily yields are not calculated for days which are public holidays in the Republic of Croatia.

b) Bonds issued in foreign capital markets

Daily yields to maturity are taken from the Bloomberg financial service, and are calculated on the basis of daily data on the most recent quoted bid price.

The calculation of the average monthly yield does not account for days for which data on daily yields are not available.

The long-term interest rate (LTIR) is the average long-term interest rate in accordance with the fourth convergence criterion referred to in Article 4 of the Protocol on the convergence criteria under Article 121 of the Treaty establishing the European Community. The long-term interest rate is calculated as the average yield on the corresponding long-term bond of the Republic of Croatia and is published as a monthly average quoted in percentages per annum. A bond of the Republic of Croatia with satisfactory liquidity, denominated in national currency with a remaining maturity of approximately 10 years, is used for the calculation. The bond used for the calculation of the long-term interest rate changes over time in accordance with the prescribed criteria for the selection of the bond for calculation.

Notes: Data reported on 31 March 2019 have been increased by reclassifying the status of funds that have not aligned their business with the provisions of Regulation on money market funds (Regulation (EU) No 2017/1131) of the European Parliament and of the Council of 14 June 2017. Data converted into euros until December 2022 at a fixed conversion rate.

Tables E1 • The tables show data on claims and liabilities of all non-UCITS and UCITS investment funds (except money market funds which are aggregated in the credit institutions' balance sheet) and monthly net transactions for each asset and liability position. Data are reported on an aggregate basis, which means that investment funds' assets also include

the funds' investments in other investment funds' shares/

The balances and net transactions of financially significant positions of assets and liabilities are shown separately for resident and non-resident counterparties and according to the counterparty's classification into a specific economic sector.

Notes: Data reported on 31 March 2019 have been increased by reclassifying the status of funds that have not aligned their business with the provisions of Regulation on money market funds (Regulation (EU) No 2017/1131) of the European Parliament and of the Council of 14 June 2017. Data converted into euros until December 2022 at a fixed conversion rate.

Tables E2 • The tables report a detailed structure of all non-UCITS and UCITS investment funds' shares/units issued (except MMFs which are aggregated in the credit institutions' balance sheet) by the type of investment and the type of fund.

The type of investment implies the fund's investment policy given in the prospectus, predominantly in bonds, equities, a combination of bonds and equities (mixed funds), real estate and other types of investment (hedge funds), venture capital

funds, and others). By the type of fund, we distinguish between open-ended and closed-ended funds. The shares/units in an open-ended investment fund are purchased, directly or indirectly, at the request of the holder of the share/unit from the investment fund's assets. The shares/units in a closed-ended fund, established in the form of a stock company or a limited liability company, cannot be purchased from the closed-ended fund's assets at holder's request.

a Preliminary data

Notes: Data also include the round tripping which increases direct investment in Croatia and direct investment abroad by the same amount. This type of direct investment was recorded in December 2008 (EUR 825.7m), August 2009 (EUR 666.5m), December 2010 (EUR –618.6m) and June 2014 (EUR 1,485.8m).

Tables H1 – H5 Balance of payments • The balance of payments of the Republic of Croatia represents a systematic overview of the value of economic transactions performed by the Croatian residents with non-residents within a particular period. From 1993 until the end of 2013, the balance of payments was compiled in accordance with the methodology recommended by the International Monetary Fund in the fifth edition of its Balance of Payments Manual (BPM5), while starting from 2014, the balance of payments is compiled according to the sixth edition of that manual (BPM6). Also, with the beginning of the implementation of BPM6, the balance of payments historical data for 2000–2013 have been revised in line with the new methodology.

Data sources include:1) estimates and statistical research carried out by the Croatian National Bank; 2) special reports of the

Croatian National Bank (International Transaction Reporting System (ITRS), monetary statistics, securities statistics and reserve assets); and 3) reports of the government institutions (Croatian Bureau of Statistics, Ministry of Finance, Croatian Health Insurance Fund and Croatian Pension Insurance Institute).

Balance of payments of the Republic of Croatia data are reported in euros (EUR). In all cases, the same data sources are used and the same principles regarding the scope of transactions and the procedures for compiling particular items are applied. Since the original data are reported in different currencies, the transaction values are converted from the original currency into the reporting currency by applying the exchange rate from the CNB exchange rate list in one of the following manners:

 by applying the midpoint exchange rate on the date of the transaction;

- by applying the average monthly or quarterly midpoint exchange rate in the case the transaction date is not available;
- by applying the end-of-period exchange rate for the calculation of a change in the transaction value between the two periods; the end-of-period balances reported in the original currency serve as a basis for calculating the change in the original currency value, which is converted, by applying the average midpoint exchange rate in the observed period, into the value of change in the reporting currency.

The report of the Croatian Bureau of Statistics on foreign trade in goods of the Republic of Croatia represents the basic data source for the balance of payments items related to exports and imports. With the accession of the Republic of Croatia to the European Union on 1 July 2013, data on the foreign trade in goods of the Republic of Croatia are obtained from two different sources: Intrastat forms for collecting statistics on the trade in goods between EU member states (Intrastat) and the Single Administration Document for collecting statistics on the trade in goods with non-EU member states (Extrastat). These data are adjusted, in accordance with the recommended compilation method, for coverage and classification. Therefore, imports and exports carried out by non-residents should be excluded from the CBS's data on foreign trade in goods. Also, in line with the

methodology, goods exports and imports in the balance of payments are reported at f.o.b. parity. The value of exports at this parity is already contained in the previously mentioned CBS Report, whereas the value of imports f.o.b. was until 2007 estimated on the basis of research studies of the CNB on the stratified sample of importers. The resulting value served as a basis for the estimate of the share of transportation and insurance services by which the original value of imports c.i.f., stated in the CBS Report, was reduced. In the 1993-2001 period, this share stood at 7.10% (estimated only on the basis of the largest and large importers), while from 2002 on it has amounted to 3.73%. The same research study, conducted by the CNB at the end of 2006 (comprising the imports in the previous year), showed that the share of transportation and insurance costs, after continuing to decrease, has reached 3.03%. This share was first applied in the calculation for the first quarter of 2007. For the sake of greater reliability, the c.i.f./f.o.b. coefficient as of 2011 started to be estimated based on the available CBS data on goods imports. The shares of transportation and insurance services have been calculated separately for each year, starting with 2008, based on the goods imported at f.o.b. parity and similar parities. The estimated coefficient amounted to 4.1% for 2008, 4.4% for 2009 and 4.7% for 2010. The figure is estimated again in the same

<sup>a</sup> Preliminary data.										

manner for each following year. The treatment of fuel and other goods included in the supply of foreign transport equipment in Croatia or of domestic transport equipment abroad remains unchanged, i.e. within goods exports and imports. As from the second quarter of 2019, the goods imports data have been modified by the data on the imports of used cars by natural persons from EU countries that are not covered by the Intrastat reporting system. The imports of goods has been revised starting from 2013.

Since 1999, based on the Survey on Consumption of Foreign Travellers in Croatia and Domestic Travellers Abroad, the item of goods exports has been modified by the estimated value of goods sold to foreign travellers and tourists and taken out of the Republic of Croatia. The item of goods imports is adjusted for the estimated value of goods imported personally by the Croatian citizens from the neighbouring countries (shopping expenditures). This treatment is also in compliance with BPM6.

Starting from 2014, imports and exports of goods for cross-border processing are monitored by the CNB under a special statistical research since, for the balance of payments purposes, the goods which do not involve a change in ownership are

excluded from the CBS data on the foreign trade in goods of the Republic of Croatia. The results of this statistical research are compared and supplemented by the CBS data on imports and exports of goods for processing which do not involve a change in ownership. The value of goods which do not involve a change in ownership between residents and non-residents (quasi transit) is also excluded from the CBS data on the foreign trade in goods of the Republic of Croatia. In addition, imports and exports of goods include transactions between residents and non-residents, taking place in the territory of the Republic of Croatia.

BPM6 changes the treatment of personal property carried by persons who change residence. Such transfers of goods are not included in the BOP statistics in line with the criteria that the ownership of goods remains unchanged.

Goods under merchanting are recorded on a gross basis as a separate item in the Goods account. Merchanting includes the value of the goods that are traded without crossing the customs border of the merchant and are instead bought and then sold abroad. The acquisition of goods by merchants is shown as a negative export of the economy of the merchant, while the sale

<sup>&</sup>lt;sup>a</sup> Preliminary data.

Notes: Data also include the round tripping which increases direct investment in Croatia and direct investment abroad by the same amount. This type of direct investment was recorded in December 2008 (EUR 825.7m), August 2009 (EUR 666.5m), December 2010 (EUR –618.6m) and June 2014 (EUR 1,485.8m).

of goods is shown as a positive export of the economy of the merchant. It is possible that net exports of goods under merchanting are negative in a certain period. Merchanting is recorded at transaction prices, rather than f.o.b. values and only in the economy of the merchant. Starting from 1 January 2011, data on the net value and commissions and other income from merchanting are collected through a statistical research on revenue and expenditure on foreign trade in services. As BPM6 recommends reporting on a gross basis, the survey questionnaire used in the research has been adjusted to a gross basis starting from 2014.

Under BPM6 non-monetary gold is shown separately from other goods because of its special role in financial markets.

Transportation, travel and other services are reported separately under the services account. Revenues and expenditures on the basis of transportation, in the 1993-1998 period, were adopted from the ITRS. From 1999 on, revenues and expenditures arising from transportation of goods and passengers, as well as the value of accompanying services, which together constitute the total value of these services, are compiled on the basis of the results of the Statistical research on international transportation services, carried out by the CNB. Owing to an exceptionally large population of road carriers, revenues and expenditures on the basis of road freight transportation are not adopted from that research. They are compiled by using ITRS data. As of January 2011, due to the abolishment of the ITRS, this item has been complied on the basis of data from export customs declarations of the CBS and estimates of the Road Freight Transporters Association. Expenditures on the basis of road freight transportation equal transportation and insurance costs related to imports of goods which belong to non-residents and which are estimated by adjusting the value of imports at c.i.f. parity to the value of imports f.o.b.

Revenues from services rendered to foreign travellers and tourists, as well as expenditures incurred by domestic travellers and tourists abroad are shown under the positions Travel. In the 1993–1998 period, these positions were assessed by using various data sources. However, since the available sources for this period do not provide for a full coverage in accordance with the recommended methodology, for the 1999–2002 period, the Survey on Consumption of Foreign Travellers in Croatia and Domestic Travellers Abroad is used for these assessments, which the CNB has carried out since the second half of 1998. The data on the average consumption of travellers from this source, which is the result of the survey of travellers (stratified sample) at border crossings, have been combined with the Ministry of the Interior and Central Bureau of Statistics data on the number of foreign and domestic travellers, in order to assess the total consumption of foreign travellers in the RC and of domestic travellers abroad in the mentioned period. For the following period, 2003-2012, the balance of payments data on revenues on the position Travel are not computed using the described standard methodological combination of volume indicators and estimated average consumption from the Survey on Consumption of Foreign Travellers, but for the sake of greater reliability of the estimate for this period on the revenues side an econometric estimation method is applied, developed by the CNB. The indicators of the Ministry of the Interior and the CBS, as well as other relevant variables, are used as input data for this econometric estimate. Finally, for the period from 2013 on, the data on revenues and expenditures on the positions Travel are recalculated as the multiple of the indicators of the number of travellers and the corresponding survey indicators of their average consumption. The Ministry of the Interior data and the results of the CNB's Survey on Consumption of Travellers serve as the main source of data for this calculation. Starting from 2020, as a result of aggravated conditions for the survey of travellers at border crossings due to the coronavirus pandemic, which have reduced the statistical reliability of computed average consumption, travel revenues are calculated by the method that uses data on card consumption by non-residents (foreigners and Croatian citizens living outside the RC) from the CNB's payment statistics and data on the use of cash and cards for payment transactions from the fiscalised consumption statistics of the Ministry of Finance - Tax Administration. The scope of the use of Tax Administration data is limited to fiscalised consumption statistics' data on only three divisions of NACE Rev. 2: retail trade, accommodation and food and beverage service activities.

Other services position is compiled by using different data sources: apart from revenues and expenditures related to insurance services and communication and construction services, which have been determined by the CNB special statistical research since 2001, the values of all other services were adopted from the ITRS until the end of 2010, when the reporting by transaction types was abolished. As of 2011, the uniform statistical survey is used for estimating the position of Other services, which encompasses 30 different types of services, the classification of which is prescribed by the IMF's Balance of Payments Manual, 6th edition. That survey also includes communication services, as a result of which a special survey on communication services was abolished, while insurance and construction services continued to be monitored through separate surveys.

With the transition to BPM6, the services account includes also manufacturing services on goods owned by others, the most important part of which is processing of goods. In addition, it also covers assembly, labelling, packing and similar services undertaken by entities that do not own the goods concerned. Under BPM6, the balance of payments includes only the net value of the service, including a fee related to finishing, and not the value of the goods themselves. Such services are monitored in the Survey on foreign trade in services (US-PB) starting from 2011. As of 2014, a separate statistical research was introduced to monitor imports and exports of goods for finishing and processing and the related services. CBS data on imports and exports of goods are used to identify enterprises that receive/provide processing services.

Starting from 2011, maintenance and repair services are monitored separately in the Statistical research on revenue and expenditure on foreign trade in services.

A novelty introduced under BPM6 with regard to financial services is the inclusion of financial intermediation services indirectly measured (FISIM), which means that a part of investment income is reclassified from Primary income to Services. It involves income of financial institutions which exceeds the reference interest rate. The reference rate is the rate that contains no service element; the rate prevailing for interbank borrowing and lending is a suitable choice as a reference rate. FISIM for loans is the margin between lending rate and funding costs calculated on the basis of the reference rate. For deposits, FISIM is the margin between the interest rate calculated on the basis of the reference rate and the interest payable to depositors. BPM6 takes into account only FISIM of financial corporations and only on loans and deposits in their balance sheets (money market funds and investment funds do not produce FISIM). In our case, FISIM is calculated in full conformity with international methodology.

Transactions in the income account are classified into four main groups.

Compensation of employees item was compiled on the basis of the ITRS until the end of 2010, when the reporting by

<sup>a</sup> Preliminary data.

transaction types was abolished. As of 2011, this position on the revenues side is estimated by a model based on the aggregate data of banks on inflows of resident natural persons from non-residents. On the expenditures side, the existing surveys on services are used, containing a part which relates to compensation of employees paid to non-residents and a separate survey on income paid to non-residents for institutions not included in the survey sample.

Income from direct investment, portfolio investment and other investment is reported separately. Data on reinvested earnings are reported separately, under direct investment income, calculated on the basis of the CNB Statistical research on direct and other equity investment. In contrast to data on dividends, data on reinvested earnings are not available for the 1993-1996 period, since at that time they were not reported separately. From the first quarter of 2009 on, international standards are applied in the statistical monitoring of reinvested earnings, meaning that reinvested earnings are reported on a quarterly basis, i.e. in the period in which the profit is actually earned. Previously, reinvested earnings were reported in the month in which the decision on the distribution of the previous year's profit was adopted, meaning that they were based on the profit earned in the preceding year. On the basis of statistical data on external debt relations, starting from 1997, income from direct investment includes data on interest arising from credit relations between residents and non-residents directly related through ownership. A novelty introduced by BPM6 is that it distinguishes three types of direct investment income:

- direct investor's investment in direct investment enterprise;
- reverse investment (refers to liabilities of direct investors to their direct investment enterprises and claims of direct investment enterprises on their direct investors); and
- investments between fellow enterprises (investment income flows between all fellow enterprises that belong to the same direct investor).

One should bear in mind that dividends, withdrawals from income of quasi-corporations, and interest can apply for any of these types of investment income. There are no reinvested earnings on reverse investments and investments between fellow enterprises because the 10% equity threshold has not been met.

BPM6 introduces a term of "superdividends". Superdividends are described as payments by corporations to their shareholders that are not a result of regular business activities over the business year for which regular dividends are paid

out. By definition, superdividends are most similar to payments to shareholders based on reinvested earnings from the previous years. Such payments should be treated as withdrawals of equity, and should not be recorded in the primary income account. This principle has been applied for some time in Croatia so that the implementation of BPM6 has not led to changes in the statistical treatment of such payments.

Income from equity portfolio investment is compiled on the basis of the same survey, whereas data on debt portfolio investment income have been compiled since 1999, based on statistics on foreign credit relations, which also encompasses income related to debt securities owned by non-residents. Income from other investments includes the calculation of interest in accordance with the foreign credit relations statistics. The methodology for compiling the statistics on debt investment income was changed in 2007 to include the reporting of income on an accrual basis. This basically means that income from debt investment and interest income are reported at the point in time when they accrue and not at the point in time when they mature or when they are paid. As a result, the historical data for the 1999-2006 period have been revised. Under the methodology, income on equity securities continues to include only dividends, while estimate of reinvested earnings for this type of income is not envisaged.

According to BPM6, interest is reported without FISIM, while the value of FISIM is presented within financial services.

Secondary income is reported separately for the general government sector and other sectors.

The ITRS was used as the main data source on current transfers for both sectors until the end of 2010, when the reporting by transaction types was abolished. As of 2011, transfers of the general government sector are recorded on the basis of the data of the Ministry of Finance and the Croatian Pension Insurance Administration in the case of pensions paid out to non-residents. In addition to taxes and excise duties, pensions, gifts and donations, which are included in current transfers of both sectors, the general government sector also encompasses data on multilateral cooperation, whereas other sectors include data on workers' remittances. As of 2011, the position of workers' remittances and gifts and donations for other sectors is estimated through a model based on aggregate data of banks on inflows of resident natural persons from abroad and outflows of resident natural persons abroad. As from the second quarter of 2019, workers' remittances include the estimated share of workers' remittances that bypass

the formal transfer channels, such as banking payment transactions and money transfer operators. For this informal part of workers' remittances (cash money transfers), the data time series starting from 2000 has been revised. Pensions from abroad are estimated on the basis of the available data of the Croatian Pension Insurance Administration. Furthermore, other sector transfers are supplemented by the data from the survey on trade in international services, containing a special part for possible transfers from and to foreign countries. Current transfers of the general government sector also include data on exports and imports of goods without a payment obligation, provided by the CBS. From 2002 on, inflows and outflows based on current transfers of other sectors are supplemented by the data of the CNB special statistical research on international transactions related to insurance services. Funds received from EU funds are reported in the current account or in the capital account in line with the type of transaction and on the basis of the data of the Ministry of Finance. BPM6 does not bring novelties in terms of content to this part of the balance of payments. In terms of presentation, workers' remittances are not compiled as a separate item, but become a part of personal transfers together with other personal transfers. Until the end of 2010, capital transfers in the capital account were based on the ITRS. From the beginning of 2011 onwards, the account of capital transfers is compiled on the basis of the data of the Ministry of Finance and the survey data on services trade and special transactions with foreign countries. Data on the potential debt forgiveness are also a constituent part of the capital account. Under BPM6, the results of research and development, such as patents and copyrights, are no longer treated as non-produced assets and their sale is no longer shown in the capital account, but as research and development services in the current account. Also, cross border movements of assets and liabilities of persons who change residence are no longer shown as transfers by migrants within capital transfers and are no longer balance of payments transactions. If assets involved are financial assets they are made under the "other adjustments."

Foreign direct investments include equity capital, reinvested earnings and debt relations between ownership-related residents and non-residents. Direct investments are investments whereby a foreign owner acquires a minimum of 10% interest in equity capital of a company, regardless of whether a resident invests abroad or a non-resident invests in Croatian residents. The CNB Research on foreign direct investments started in 1997 when companies included in the survey also delivered data on direct investments for the 1993-1996 period. For the same period, no data are available on reinvested earnings and other capital under direct investment position, where all debt relations between related residents and non-residents are classified (excluding the banking sector). Such data actually became available only after the stated research had been launched. Since 1999, data on debt relations within direct investments have been collected on the basis of external debt relations statistics. A research on the purchase and sale of the real estate by non-residents on the territory of the Republic of Croatia has been carried out since 2007. Persons obliged to submit reports are the public notaries who learn about these transactions in the course of their business. Data on the purchase and sale of the real estate by Croatian residents abroad were compiled on the basis of the ITRS until its abolishment in late 2010. From 2011 on, data on the purchase and sale of the real estate by Croatian non-residents abroad are compiled on the basis of the Report on the real estate trade abroad. These purchase and sale transactions are also a constituent part of direct investments.

In addition, under BPM6, direct investment is further divided into:

- direct investment in direct investment enterprises;
- investment in direct investor (reverse investment); and
- investment between horizontally linked enterprises (fellow enterprises).

Reverse investment arises when a direct investment enterprise acquires equity in its investor, provided it does not own equity comprising 10% or more of the voting power in that direct investor, otherwise a new direct investment would arise. It also includes debt investment in the reverse direction. Investments between fellow enterprises are equity investments between enterprises which are linked by indirect ownership, also up to 10%, or debt investments between such enterprises. It should be noted for fellow enterprises that this type of investment has been reported within the external debt statistics since 2009. From 2014 on, it is possible to identify such investment also within the Research on direct and other equity investment.

According to BPM6 all debt relations between two affiliated financial intermediaries are treated in the same manner – outside direct investment, i.e. within other or portfolio investment.

BPM6 introduces the concept of "quasi-corporations", which refers to corporations producing goods and services in a foreign economy without being a separate legal entity in that economy. Types of quasi-corporations include: branches, notional resident units, multiterritory enterprises, joint ventures, partnerships, etc. In Croatia, branches have been monitored separately within direct investment as of 2005.

Data on equity portfolio investments are collected from the same data source as the data on direct equity investments. Debt portfolio investments include all investments in short-term and long-term debt securities that cannot be classified under direct investments. In the 1997-1998 period, these data were collected through the CNB Research on direct and portfolio investments, and since 1999 data on external debt relations and monetary statistics data for bank investment have been used. Starting from 2002 and 2004, this position has also been compiled for investment funds and pension funds, respectively. Since 2009, these positions have been modified by the statistics on trade in equity and debt securities submitted by the Central Depository and Clearing Company, credit institutions and investment firms providing securities custody services. Portfolio investments are modified by these data in the parts not fully covered by the existing research. Data for the 2006-2009 period have also been revised. As a result, from 2006 on, the balance of payments includes data on debt securities issued by domestic issuers and traded by non-residents in the domestic market (portfolio investment, debt securities on the liabilities side). It should be noted that this approach is already applied in relation to securities issued by our residents abroad and that the amount of debt generated in this manner is reduced by the amount repurchased by residents.

From the first quarter of 2010, the balance of payments includes the transactions arising from the concluded contracts which have features of financial derivatives. Reporting institutions are commercial banks and other financial institutions. In addition, the reporting population has been extended as of the fourth quarter of 2012 to include non-financial institutions which enter into these transactions mainly to hedge against changing market conditions.

Other investment encompasses all other debt investments that have not been mentioned, apart from investment constituting reserve assets. Other investments are classified by instruments, maturity and sectors.

In addition, BPM6 defines a position of Other equity

investment, which implies equity investments that do not meet the criteria for direct investment, portfolio investment or international reserve assets. Other equity investment is never in the form of securities, in contrast to portfolio investment. As the ownership of many international organisations is not in the form of securities, it is classified as other equity. In most cases, equity in quasi-corporations, such as branches or notional units for ownership of real estate and other natural resources is included in direct investment, but if the share accounts for less than 10% in the equity it is classified to other equity investment.

Currency and deposit position shows residents' claims on foreign countries for foreign cash and deposits with foreign banks, as well as obligations of the Croatian banks for deposits owned by non-residents. Monetary statistics represent a data source for the general government sector and other monetary financial institutions. Data on balance and currency structure of foreign assets and liabilities, contained in monetary statistics, are used to assess transactions from which the exchange rate effect was eliminated. In the 1993-1998 period, data on other sectors' claims under this position were compiled on the basis of the CNB estimate of a portion of net foreign currency inflows of the household sector which is not classified under current transfers. Since 1999, this position has included only the data based on the Bank for International Settlements quarterly data, while data in the fourth quarter of 2001 and in the first two quarters of 2002 also relate to the effect of the EMU countries' currencies changeover to the euro. Data for the fourth quarter of 2008 were modified by estimates of currency and deposit withdrawals from the financial system driven by fears of the effects of the global financial crisis.

Credits granted by residents to non-residents and foreign loans utilised by residents and granted by non-residents, which cannot be classified into direct investments or trade credits, are classified by the institutional sector and maturity under the corresponding positions of other investment. The CNB foreign credit relations statistics represent the data source for these positions.

Trade credits in the 1996–2002 period included the CNB estimates of advance payment and deferred payments made on the basis of the sample of the largest and large importers and exporters. Data on advance payments have been estimated since 1996, while data on short-term deferred payments (first up to 90 days, then up to 150 days, and today from 8 days to 1 year) have been collected since 1999. In 2003, this research

was replaced by a new one, where the selected companies, regardless of their size (stratified sample), are obliged to submit data. Data on deferred payments with the original maturity of more than one year are adopted from the CNB foreign credit relations statistics.

Item Other investment – Other claims and liabilities includes other claims and liabilities not included in trade credits and other financial instruments, among others, prepayments of premiums and reserves for outstanding claims for non-life insurance, entitlements of beneficiaries under life insurance policies and pension schemes and provisions for calls under standardised guarantees. This position is compiled on the basis of data submitted by insurance companies and includes changes in life insurance mathematical reserves.

The allocation of SDRs to IMF members is shown as the incurrence of a liability by the recipient and included in other investment (SDR position) with a corresponding increase of SDRs in reserve assets. Other acquisitions and disposals of SDRs are shown as transactions in reserve assets.

The sector classification of the portfolio and other investment involves the sector classification of residents according to ESA 2010 and SNA 2008 and is fully harmonised with the sector classification of the gross external debt by domestic sectors and the international investment position. The general government sector includes central government, social security funds and local government. The sector of the central bank includes the Croatian National Bank. The sector of other monetary financial institutions comprises credit institutions and money market funds. Other domestic sectors comprise all financial institutions and intermediaries except the central bank and other monetary financial institutions (including the Croatian Bank for Reconstruction and Development), private and public non-financial corporations, non-profit institutions and households, including craftsmen.

In the period from 1993 to 1998, the estimate of reserve assets transactions was made by converting the changes in the original currencies into the US dollars by applying the average monthly exchange rate of the currencies contained in the reserves. Since 1999, the changes in reserve assets balance have been calculated on the basis of the CNB accounting data.

From the first quarter of 2013, data on transactions carried out by the International Reserves and Foreign Exchange Liquidity Department of the Croatian National Bank represent the data source for this position.

Table H8 International reserves and foreign currency liquidity • International reserves and foreign currency liquidity are shown in accordance with a Template on international reserves and foreign currency liquidity, drawn up by the IMF. A detailed explanation of the Template is given in "International Reserves and Foreign Currency Liquidity – Guidelines for a Data Template, 2013".

The first part of the Template shows total assets of the Croatian National Bank in convertible foreign currency. Official reserve assets (IA) show those types of assets that are readily available to the CNB at any moment for bridging imbalances in international payments. Official international reserves include: short-term foreign negotiable debt securities, foreign cash, foreign currency sight deposits, foreign currency time deposits which can be withdrawn before maturity,

foreign currency time deposits with a remaining maturity of up to 1 year, reserve position with the IMF, special drawing rights, gold, and reverse repos with foreign negotiable debt securities.

The second part of the Template shows fixed predetermined foreign currency net liabilities of the Croatian National Bank and the central government that fall due in the next 12 months. Foreign currency loans, securities and deposits (II1) include future interest payments on banks' foreign currency reserve requirements with the CNB (only interest payments for the next month are included), payments of future maturities of foreign currency CNB bills, future principal and interest payments on loans from the IMF, and future principal and interest payments on the central government's foreign currency debts. Aggregate short and long positions in forwards and

futures in foreign currencies (II2) include future collections (+) or payments (-) arising from currency swaps between the CNB and domestic banks (temporary sale or purchase of foreign currency). Item Other (II3) includes future payments arising from repo transactions with foreign negotiable debt securities.

The third part of the Template shows predetermined contingent foreign currency net liabilities of the Croatian National Bank and the central government, which fall due in the following 12 months. Contingent liabilities in foreign currency (III1) include future principal and interest payments on foreign loans guaranteed by the central government, and banks' foreign currency reserve requirements with the CNB. (The inclusion of reserve requirements in foreign currency is based on the assumption that there will be no changes in ratios or in the base of foreign currency reserve requirements, which comprises foreign currency sources of funds, including ordinary foreign currency accounts, special foreign currency accounts, foreign currency accounts and foreign currency sight deposits, received foreign currency deposits and received foreign currency loans, as well as obligations arising from securities issued in foreign currency (excluding banks' equity securities) and hybrid and subordinated instruments). Undrawn credit lines show potential inflows (+) or outflows (-) which would arise from drawdowns under these credits.

The fourth part of the Template lists memo items. Short-term, domestic currency debt indexed to foreign currency (IV(a)) shows obligations arising from the Act on Converting Households' Foreign Currency Deposits into the Public Debt of the Republic of Croatia, which fall due in the next 12 months. Pledged assets (IV(c)) show time deposits in foreign currency with a maturity over 3 months listed in item IB which are also used as collateral. Repo transactions with securities show the value of collateral that is subject to repo and reverse repo transactions with securities as well as how these transactions are registered in the Template.

As of January 2023, after the Republic of Croatia joined the euro area, the national currency kuna was exchanged for the euro. Therefore, the first part of the Template shows total foreign currency assets of the CNB, i.e. the assets in a currency other than the euro. The foreign currency assets shown in the first part of the Template are divided into two sections. Section IA shows the total foreign currency assets of the CNB by non-euro area counterparties, accounting for international reserves. Section IB shows other foreign currency assets of the CNB, which include foreign currency claims towards euro area counterparties.

Also, from January 2023, the Template does not include the items related to the central government in accordance with the definition of the reserve assets of the euro area.

Table H11 Harmonised competitiveness indicators

indices Q1/1999 = 100

Year	Month	Nominal harmonised								
		competitiveness indicators	Consumer price index	Producer price index	Gross domestic product deflator	Unit labour costs

#### Table H11 Indices of harmonised competitiveness indica-

tors • Harmonised competitiveness indicators are calculated on the basis of weighted averages of bilateral exchange rates vis-a-vis the currencies of the trading partners of Croatia and are deflated by appropriate price or cost indices. The weights for the calculation of HCIs are based on bilateral data on trade in manufactured goods, as defined in Sections 5 to 8 of the Standard International Trade Classification (SITC) and trade in services in accordance with Extended Balance of Payments Services classification (EBOPS 2010) for the periods 1995–1997, 1998–2000, 2001–2003, 2004–2006, 2007–2009, 2010–2012, 2013–2015 and 2016–2018.

The weights incorporate information on both exports and imports. Import weights are the simple shares of each partner country in the total imports. Exports are double-weighted in order to account for "third-market effects", i.e. to capture the competition faced in foreign markets from both domestic producers and exporters from third countries. The final overall weights of each partner country are obtained as the weighted

average of the export and import weights. The HCIs are chainlinked at the end of each three-year period and updated every three years in order to reflect recent developments in the pattern of international trade.

The group of countries for the formation of HCIs published on the website of the Croatian National Bank (HCI-18)¹ consists of 37 trading partners, including a) all other 19 euro area countries and b) the 18 remaining countries: Australia, Canada, Denmark, Hong Kong, Japan, Norway, Singapore, South Korea, Sweden, United Kingdom, Switzerland and the United States (HCI-12) as well as Bulgaria, China, the Czech Republic, Hungary, Poland and Romania.

The nominal HCI is calculated on the basis of data on bilateral exchange rates available on the ECB website.

The HCI deflated by consumer prices is calculated on the basis of data on harmonised consumer price indices for European countries (Eurostat) and for the other trading partners based on national consumer price indices.

The HCI deflated by producer prices is calculated on the

In addition to for the HCI-18, the European Central Bank calculates and publishes indicators for the remaining 19 euro area countries, for the remaining 19 euro area countries and the group of 12 trading partners (HCI-12) as well as for the remaining 19 euro area countries and the group of 42 trading partners.

basis of data on producer price indices in domestic manufacturing (according to the NACE Rev.2 classification) for European countries (Eurostat), and for the other trading partners these data are derived from data published by the Bank for International Settlements (BIS).

The HCI deflated by GDP deflators is calculated on the basis of GDP deflators derived from their quarterly national accounts as published by Eurostat for European countries and for the other trading partners they are derived from their national accounts as published by the BIS, OECD and IMF.

The HCI deflated by unit labour costs in the total economy is calculated on the basis of data that are for European countries derived from their quarterly national accounts as published by Eurostat. For the other trading partners, these data are derived from their national accounts as published by the BIS, OECD and IMF. The unit labour cost is the ratio of total compensation per employee to labour productivity, with labour productivity measured as GDP at constant prices divided by the total number of persons employed.

<sup>\*</sup> Revised data.

Notes: Notes: As from 30 September 2022, gross external debt data have been revised starting from January 2006 because the methodology regarding the scope of central government debt arising from inflows of EU funds has changed from a net basis to a gross basis. This change affected the gross external debt stock, while net external debt and the international investment position remained unchanged. Since January 2023 when the Republic of Croatia joined the euro area, the external liabilities of the central bank sector rose by the share of euro banknotes allocated according to the banknote allocation key of the European Central Bank, which have not been released for circulation (EUR 9.5bn). The external cleans of the central bank sector associated with the allocation of euro banknotes within the Eurosystem rose by the same amount, with the effect of the allocation on net external debt remaining neutral.

Table H12 Gross external debt by domestic sectors • Gross external debt is defined as the external debt liabilities of residents on the basis of debt securities issued in the foreign markets (at nominal value), deposits of non-residents, credits (repo agreements included) and trade credits regardless of their contractual maturity and, from December 2005 on, non-resident investment in debt securities issued in the domestic market.

External debt is shown by domestic sectors, i.e. by debtor sectors, which implies the sector classification of residents according to ESA 2010 and SNA 2008 manuals. The general government sector includes central government, social security funds and local government. The sector of the central bank shows the debt of the Croatian National Bank. The sector of other monetary financial institutions shows the debt of credit institutions and money market funds. Item Other sectors shows the debt of all financial corporations except monetary financial institutions, private and public non-financial corporations, non-profit institutions serving households and households, including employers and self-employed persons. Item Direct investment shows borrower - lender transactions of other sectors that are interrelated by ownership, according to the directional principle. Each sector data (except direct investment) are further shown by contractual (short-term or long-term) maturity and by debt instrument. From the beginning of 2004, instruments included in item Currency and deposits (other monetary institutions) are reported in accordance with their maturity. Data for the previous periods are reported only on a long-term basis. Outstanding gross external debt includes future principal payments, accrued interest and principal and interest arrears. Outstanding debt data are shown at the CNB's midpoint exchange rate at the end of the period. Data are considered preliminary until after publication of the final BOP data for the reporting quarter.

<sup>\*</sup> Revised data

Notes: As from 30 September 2022, gross external debt data have been revised starting from January 2006 because the methodology regarding the scope of central government debt arising from inflows of EU funds has changed from a net basis to a gross basis. This change affected the gross external debt stock, while net external debt and the international investment position remained unchanged. Since January 2023 when the Republic of Croatia joined the euro area, the external liabilities of the central bank sector rose by the share of euro banknotes allocated according to the banknote allocation key of the European Central Bank, which have not been released for circulation (EUR 9.5bn). The external claims of the central bank sector associated with the allocation of euro banknotes within the Eurosystem rose by the same amount, with the effect of the allocation on net external debt remaining neutral.

Table H13 Public sector gross external debt and publicly guaranteed and non-publicly guaranteed private sector gross external debt • Gross external debt is defined as the external debt liabilities of residents on the basis of debt securities issued in the foreign markets (at nominal value), deposits of non-residents, credits (repo agreements included) and trade credits regardless of their contractual maturity and, from December 2005 on, non-resident investment in debt securities issued in the domestic market.

This table shows gross external debt structured with regard to the role of the public sector. Public sector includes

the general government, the central bank, public financial corporations, and public non-financial corporations. Publicly guaranteed private sector gross external debt is defined as the external debt liabilities of entities not covered by the definition of the public sector, the servicing of which is guaranteed by an entity from the public sector. Non-publicly guaranteed private sector gross external debt is defined as the external debt liabilities of entities not covered by the definition of the public sector, the servicing of which is not guaranteed by the public sector.

Items are valued in the same manner as in Table H12.

Memo item: Projected interes	st payments		29.6	112.0	150.1	192.0	291.7	590.9	547.5	508.9	387.5	339.7	241.3	515.4

Notes: Projected payments for this quarter and year refer to the period from the date of the gross debt position to the end of the stated quarter or year. As of CNB Bulletin No. 268, the gross external data series starting from 31 December 2000 includes data on trade credit debt with the original maturity of up to six months. Since January 2023 when the Republic of Croatia joined the euro area, the external liabilities of the central bank sector rose by the share of euro banknotes allocated according to the banknote allocation key of the European Central Bank, which have not been released for circulation (EUR 9.5bn). The external claims of the central bank sector associated with the allocation of euro banknotes within the Eurosystem rose by the same amount, with the effect of the allocation on net external debt remaining neutral.

Table H14 Gross external debt by domestic sectors and projected future payments • The table shows outstanding gross external debt, projected gross debt payments and estimated interest payments according to the CNB's midpoint exchange rate at the end of the period. Gross external debt is defined as the external debt liabilities of residents on the basis of debt securities issued in the foreign markets (at nominal value), deposits of non-residents, credits (repo agreements included) and trade credits regardless of their contractual maturity and, from December 2005 on, non-resident investment in debt securities issued in the domestic market.

The structure of sectors, original maturity and instruments shown in this table follows the structure presented in Table H12.

Future principal and interest payments of monetary financial institutions are estimated on the basis of the available monetary statistics data on balances on remaining maturity and the schedule of interest payments. Future principal and interest payments of other sectors are estimated on the basis of the submitted debt-service payment schedule and the benchmark interest rate applicable on the reporting date. Projected payments of accrued interest, which are an integral part of the gross external debt, increase the projected principal payments in the period when the first instalment of interest falls due and, consequently, decrease the projected first interest payments.

<sup>\*</sup> Revised data

Notes: As of CNB Bulletin No. 268, the gross external data series starting from 31 December 2000 includes data on trade credit debt with the original maturity of up to six months. Starting from the same issue of the Bulletin, in the entire series of data, port authorities are reclassified from Other sectors to the sector General government, without changes in the total debt stock. As from the first data release for 30 March 2021, gross external debt data have been revised as follows: starting from January 2009, a specific set of units is reclassified from the public to the private sector, without changes in the debt stock; starting from January 2010, because of the inclusion of changes due to improvements in the quality and the scope of data collected by regular surveys.

Table H15 Gross external debt by other sectors • Gross external debt of other sectors shows the external debt of all financial corporations except monetary financial institutions (including the Croatian Bank for Reconstruction and Development), public non-financial corporations, private

non-financial corporations, non-profit institutions serving households and households, including employers and self-employed persons. Each sector data are further shown by contractual (short-term or long-term) maturity and by debt instrument.

<sup>&</sup>lt;sup>a</sup> Preliminary data.

Notes: Data also include the round tripping which increases direct investment in Croatia and direct investment abroad by the same amount. This type of direct investment was recorded in December 2008 (EUR 825.7m), August 2009 (EUR 666.5m), December 2010 (EUR –618.6m) and June 2014 (EUR 1,485.8m). Since January 2023 when the Republic of Croatia joined the euro area, the external liabilities of the central bank sector have risen by the share of euro banknotes allocated according to the banknote allocation key of the European Central Bank, which have not been released for circulation (EUR 9.5bn). The external claims of the central bank sector associated with the allocation of euro banknotes within the Eurosystem have risen by the same amount, with the effect of the allocation on net international investment position remaining neutral. The said liabilities and claims of the central bank sector relating to the share of euro banknotes are shown in the position of other investment, under currency and deposits.

Table H16 International investment position • The International investment position table is made in accordance with the methodology recommended by the International Monetary Fund in its Balance of Payments Manual. From 1993 until the end of 2013, the international investment position was compiled in accordance with the methodology recommended by the International Monetary Fund in the fifth edition of its Balance of Payments Manual (BPM5), while starting from 2014, the international investment position is compiled according to the sixth edition of that manual (BPM6). Also, with the beginning of the implementation of BPM6, the historical data for 1999-2013 have been revised in line with the new methodology. Data sources include: reports from banks, enterprises, the Croatian National Bank, and the Zagreb Stock Exchange (ZSE).

International investments of the Republic of Croatia and international investments into the Republic of Croatia are recorded in euros (EUR). The conversion of values from the original currencies into the reporting currencies is performed by applying the midpoint exchange rate of the Croatian National Bank on the reporting date to balances.

Data on foreign direct and portfolio equity investment are compiled on the basis of market prices, whenever available. Market prices on the last day of the reporting period taken from the Zagreb Stock Exchange are used in the part related to investment in the Republic of Croatia, while in the part related to investment abroad, the reporting units participating in the research on direct and portfolio equity investments are obliged to state the value at market prices of their equity investment abroad. When this is not possible, the book value of total equity held by direct or portfolio investors is used, regardless of whether investments are made in the Republic of Croatia or abroad (the own funds at book value method).

The sector classification of the portfolio and other investment involves the sector classification of residents according to ESA 2010 and SNA 2008 and is fully harmonised with the sector classification of the gross external debt by domestic sectors and the balance of payments. The general government sector includes central government, social security funds and local government. The sector of the central bank includes the Croatian National Bank. The sector of other monetary financial institutions comprises

credit institutions and money market funds. Other domestic sectors comprise all financial institutions and intermediaries except the central bank and other monetary financial institutions (including the Croatian Bank for Reconstruction and Development), private and public non-financial corporations, non-profit institutions and households, including craftsmen.

Item Portfolio debt investment — Assets and liabilities comprises data on investments of residents into debt securities issued by non-residents (assets) and investments of non-residents into debt securities issued by residents (liabilities). The source of data is the register of foreign credit relations kept by the Croatian National Bank and monetary statistics data.

Data on portfolio equity and debt investment are modified by the data submitted by the Central Depository and Clearing Company, credit institutions and investment firms providing securities custody services, particularly in the part Assets of other sectors.

From the first quarter of 2010, the balance of payments includes the balance of positions of the concluded contracts which have features of financial derivatives. Reporting institutions are credit institutions and other financial institutions. In addition, the reporting population has been extended as of the fourth quarter of 2012 to include non-financial corporations which enter into these transactions mainly to hedge against changing market conditions.

Within other investment, BPM6 defines a position of Other equity investment, which implies equity investments that do not meet the criteria for direct investment, portfolio investment or international reserve assets. This position also includes shares in ownership of international organisations.

Item Other investment – Currency and deposits – Assets shows the total liquid foreign currency assets of credit institutions authorised to do business abroad reduced by the amount of foreign currency deposited by credit institutions with the CNB in fulfilment of a part of their reserve requirements. In addition to credit institutions' foreign claims, foreign claims of the general government sector are also

shown. The sources of data are reports from the government and credit institutions. The Bank for International Settlements quarterly data are used for other sectors. Item Other investment – Currency and deposits – Liabilities shows the total foreign currency and kuna liabilities of the said sectors abroad arising from current accounts, time and notice deposits, sight deposits and demand deposits. The sources of data for this item are reports from credit institutions.

Item Other investment – Loans – Assets and liabilities comprises data on loans granted and received between residents and non-residents classified according to institutional sectors. The source of data is the register of foreign credit relations kept by the Croatian National Bank.

Item Other investment – Trade credits – Assets and liabilities comprises foreign claims and foreign liabilities of the said sectors arising from trade credits. The source of data is the register of foreign credit relations kept by the Croatian National Bank for loans over 12 months and the statistical survey on short-term trade credits for trade credits up to 12 months.

Item Other investment – Other equity investment comprises equity investment that is not in the form of securities. It comprises equity investment in quasi-corporations, international organisations etc.

Item Other investment – Other assets and liabilities includes other claims and liabilities not included in trade credits and other financial instruments.

Position Other investment – Special drawing rights on the liability side shows the balance of allocated special drawing rights. The balance of this position was increased on the basis of the general allocation of August 2009, when the Republic of Croatia was allocated SDR 270.652.208, and a special allocation in September of the same year, when it was allocated another SDR 32.848.735.

Item International reserves of the CNB is compiled on the basis of the CNB Accounting Department reports which contain data on their balances and changes.

a Preliminary data.

Notes: Since January 2023 when the Republic of Croatia joined the euro area, the external liabilities of the central bank sector have risen by the share of euro banknotes allocated according to the banknote allocation key of the European Central Bank, which have not been released for circulation (EUR 9.5bn). The external claims of the central bank sector associated with the allocation of euro banknotes within the Eurosystem have risen by the same amount, with the effect of the allocation on net international investment position remaining neutral. The said liabilities and claims of the central bank sector relating to the share of euro banknotes are shown in the position of other investment, under currency and deposits.

#### Table I1 Non-financial accounts of general government •

Table I1 shows total revenue and expenditure and their most important components as well as net lending (+) / borrowing (-) by subsector and at the level of the entire general government sector.

Net lending (+) / borrowing (-) is defined as the difference between total revenue and expenditure, and its ratio to gross domestic product (GDP) at current prices represents the statistical indicator whose value determines whether an EU member state meets one of the four Maastricht Treaty convergence criteria (the general government deficit ceiling).

The source of data for the table on non-financial accounts of general government is the Croatian Bureau of Statistics (CBS). The methodological basis for data compilation is the European system of national and regional accounts in the European Union 2010 (ESA 2010) and the Manual on government debt and deficit (MGDD).

The scope of the general government institutional sector is defined in the Decision on the statistical classification of institutional sectors (OG 1/2015), which is officially adopted and published by the CBS, and which is based on the ESA 2010 methodology under which general government is divided into central government, social security funds and local government.

As one of the basic methodological principles, ESA 2010 defines the accounting principle for recording revenue and expenditure, where the time adjusted cash method is applied to certain tax revenues, while other tax revenues are recorded on a pure cash basis. Furthermore, this statistics implements the methodological adjustments defined under ESA 2010 and MGDD provisions, of which most important for the general government sector are the treatment and recording of investment, public-private partnerships and concessions, capital transfers in cases of statistical debt assumption, payments under guarantees, and capital injections as

non-financial transactions. Also, this methodology includes specific guidance for recording revenues from greenhouse gas emission allowances, military equipment expenditure, proceeds from UMTS licenses, as well as for the revenue correction implemented under the super-dividend test and corrections associated with transactions with EU funds.

A detailed description of the methodology for compiling the Excessive Deficit Procedure Report and statistics of nonfinancial accounts of general government is posted on the CBS website in the document entitled EDP Inventory.

Quarterly non-financial accounts are reported only at the level of the entire general government sector, and not for its subsectors.

The sum of transactions in revenues and expenditures from quarterly non-financial accounts is equal to total revenue and expenditure in annual non-financial accounts. The first three quarters always show the best estimate of transactions based on available quarterly data sources and assessment methods.

Table I2 Main macro aggregates of general government in ESA 2010 accounts • The source of data for the compilation of Table I2 is the Croatian Bureau of Statistics (CBS) and the methodological basis for the compilation of macro aggregates of indicators in Table I2 is the same as for indicators in Table I1

Table I2 shows the annual sequence of accounts of the general government sector according to ESA 2010, which describes the economic cycle from production and generation of income, through its distribution and redistribution, to use of disposable income for final consumption. The difference between disposable income and final consumption is the value of net saving that can be further used to accumulate non-financial or financial assets.

Non-financial accounts of the sector consist of current accounts and the capital account as the accumulation account. Current accounts include the production account, the generation of income account, the allocation of primary income account, the secondary distribution of income account and the use of disposable income account. Current accounts show resources, i.e. transactions that add to the economic value, and uses, i.e. transactions that reduce the economic value. The capital account shows changes in non-financial assets and liabilities and net worth of the sector. Aggregates that close out individual accounts are called balancing items and they can be presented on a gross or net basis. Gross value is the value before corrections for consumption of fixed capital.

The production account shows the total value of goods and services produced in a reference period. Total production for the government sector as a non-market producer is defined by means of production costs, i.e. it is equal to the sum of intermediate consumption, consumption of fixed capital, compensation of employees and taxes less subsidies on production. The difference between production and intermediate consumption is gross value added of the general government sector, while the sum of gross value added by all sectors in the economy is the value of gross domestic product according to the production approach.

The generation of income account is actually the first account of primary income allocation where the value added generated by production is distributed to production factors through compensation of employees and to the government through taxes and subsidies on production to generate a net operating surplus, which is according to ESA equal to zero for a non-market producer. The following account presents primary allocation of property income, i.e. interest, dividends and rent to owners of financial and non-financial non-produced assets, and taxes which the government receives on production and imports, as well as net subsidies as paid current transfers on production and products. The secondary distribution of income account shows revenues and expenditures from taxes on income and wealth and other current transfers. The resources side of the same account shows net social contributions, while the uses side shows social transfers in cash and in kind. Both accounts show effects of one of the basic government functions, that is the redistribution of income. The balancing item of the secondary distribution of income is disposable income which, reduced by final consumption expenditure (in ESA 2010, only general government, households and non-profit institutions serving households have final consumption expenditure) of the government in the next account (the use of disposable income account), shows saving of the general government sector. The capital account, which is the last in the sequence of non-financial accounts, records acquisitions and disposals of non-financial assets and capital transfers. The balancing item of the capital account is net lending/borrowing (the main surplus/deficit measure under ESA), where net lending represents the amount which the sector has available to lend to other sectors, while net borrowing represents the amount the sector must borrow from other sectors. This aggregate is the basic measure of government surplus/deficit under ESA 2010 and it is identical to that in Table I1.

Table I3 General government debt

<sup>&</sup>lt;sup>a</sup> Domestic debt of general government = (1.1 + 1.2 + 1.3 – consolidation elements).

Table 13 General government debt (ESA 2010) • Table I3 shows the stock of general government debt in accordance with the European system of national and regional accounts 2010 (ESA 2010) and in line with the Eurostat Manual on Government Deficit and Debt.

As from 31 December 2010, a sector classification of institutional units in the Republic of Croatia is used, in accordance with the Decision on the statistical classification of institutional sectors officially adopted and published by the Croatian

Bureau of Statistics, which is based on the ESA 2010 methodology that divides the general government into the following subsectors: central government, social security funds and local government. Under the sector classification ESA 2010, the central government comprises, in addition to central government authorities, the Croatian Radiotelevision, the Croatian Bank for Reconstruction and Development (hereinafter: the CBRD), the State Agency for Deposit Insurance and Bank Resolution and public corporations that meet methodological

<sup>\*</sup> Data for March-April 2023 are slightly revised due to regular update of data for the current year.

criteria, the most important of which are Croatian Railways Infrastructure, Rijeka – Zagreb Motorway and Croatian Motorways. According to the ESA 2010 methodology, social security funds include the Croatian Pension Insurance Administration, the Croatian Institute for Health Insurance and the Croatian Employment Service.

The source of primary data for domestic and external debt are general government units (the Ministry of Finance of the Republic of Croatia and other units of government authorities system, units of local and regional self-government, non-financial corporations allocated to the statistical definition of general government sector, etc.) in the part that relates to cash and deposits, treasury bills, bonds and foreign loans, and the Croatian National Bank in the part relating to loans of resident banks, the CBRD and the Croatian National Bank. Up to November 2010, data on resident bank loans were based on the reporting system in accordance with the Decision relating to the bank statistical report and from December 2010, the data are based on the reporting system in accordance with the Decision on statistical and supervisory reporting.

Data are divided by creditor to domestic and external debt and by instrument categories, in accordance with ESA 2010, to cash and deposits, short-term debt securities, long-term debt securities, and loans.

The stock of the category cash and deposits includes cash and deposits of other sectors of economy held by units of general government sector.

The stock of the category short-term debt securities includes short-term debt securities with original maturity up to and including one year, such as treasury bills of the Ministry of Finance (issued in kuna, with a currency clause or denominated in foreign currency), eurobills of the Ministry of Finance and other money market instruments.

The stock of the category long-term debt securities includes

long-term debt securities with original maturity of over one year, such as bonds issued on the domestic and foreign markets and long-term T-bills of the Ministry of Finance. Bonds issued abroad in one foreign currency and swapped into another foreign currency are treated as debt denominated in the currency of the swap transaction.

Starting from February 2002, debt securities issued abroad, owned by resident institutional units at the end of the reference period, were reclassified from external into domestic debt. Starting from December 2005, debt securities issued in the domestic market, owned by non-resident institutional units at the end of the reference period, were reclassified from domestic into external debt.

Loans include loans received from resident and non-resident creditors and, in accordance with the ESA 2010 methodology, assumed state-guaranteed loans given to institutional units whose guarantees were activated within a period of three years (the so-called third call criterion) or loans transferred by agreement from the original debtor to the state. In addition, harmonisation was carried out in conjunction with the methodology of the treatment of public-private partnerships and concessions.

The stock of T-bills regardless of original maturity is shown at nominal value, i.e. with the entire discount included. The stocks of bonds and loans include outstanding principal value, excluding accrued interest.

The stock of debt of a specific subsector of general government is consolidated within the subsector; the stock of domestic general government debt is also consolidated among the subsectors

Shown below is data on the total stock of general government guarantees issued, reduced by guarantees given to other general government units. The sources of data are identical to those for loans.

<sup>&</sup>lt;sup>a</sup> On the domestic market.

Bulletin table on Economic indicators.

Source: Croatian Bureau of Statistics

Croatian Bureau of Statistics (CBS) introduced the consumer price index (CPI) in early 2004. This indicator of price movements was compiled in accordance with the methodological principles laid down by the ILO and Eurostat. In its First Release, issued on 17 February 2004, the CBS published the data on movements in the CPI in January 2004 and the time series for the CPI as of January 2001. The CBS subsequently constructed the time series for the consumer price index encompassing the period from January 1998 to December 2000. As expected following the introduction of the new index, the CBS ceased to publish the retail price index (RPI) and the cost of living index, whose calculation methodologies have not been adequately harmonised with internationally accepted standards. The main features of the CPI are described in the CNB Bulletin No. 91 (see Box 1). The data on the average year-on-year consumer price inflation rate are shown in the

Table J1 Consumer price and producer price indices • The

Table I1a Harmonised indices of consumer prices • Harmonised indices of consumer prices (HICP) are economic indicators which measure the change in the level of goods and services acquired, used or paid over time by households, calculated in accordance with a harmonised approach and a special set of definitions. This enables the calculation of a consistent measure of inflation for the European Union, Euroarea and the European Economic Area as well as comparability among member states. The Croatian Bureau of Statistics has been calculating HICP since January 2007 and delivering it to Eurostat as the main disseminator of HICP statistics on EU level. HICP series cover the period from January 1998 (since the COICOP classification has been in use) onwards. Since changes of tax rates on products affect inflation as measured by HICP, additional information is gathered on the effect of tax changes on inflation based on which this effect is isolated, resulting in the harmonised index of consumer prices at constant tax rates (HICP-CT). HICP-CT is a harmonised index of consumer prices where tax rates on products are kept constant in the observation period compared to the reference period, i.e. through time. In the event of a tax rate change,

<sup>&</sup>lt;sup>b</sup> Data based on new year 2015=100 are available as of January 2000.

the difference between the current HICP-CT and HICP values would indicate the effect of the tax rate change on price changes, assuming that changes in tax rates were applied instantaneously and fully. Series of monthly and annual HICP and HICP-CT indices for the Republic of Croatia and other EU member states and the related methodology are available on the Eurostat website. Pursuant to Commission Regulation (EU) 2015/2010, as of February 2016, the HICP and HICP-CT indices have been compiled and published relative to the reference period of 2015 (2015=100).

Table J2 Core consumer price indices • The core consumer price index is calculated by the Croatian Bureau of Statistics (CBS) in the manner that agricultural products prices and administrative prices (which among others include the prices of electricity and refined petroleum products) are excluded from the basket of goods and services used in the calculation of the total index. These two groups of products account for a total of 35,23% in the basket in 2013 (agricultural products 5,53 percentage points, and administrative products 29,70 percentage points) and are assigned a zero weight.

Table J3 House price indices • Developed in cooperation by the Croatian Bureau of Statistics (CBS) and the Croatian National Bank (CNB), the house price index (HPI) replaced the hedonic real estate price index (HREPI), which the Croatian National Bank had been compiling on its own until the second quarter of 2015 (Table J3a). The house price index measures trends in the market prices of residential properties purchased by households, irrespective of the property's previous owner or intended use. The market price includes the value of the land. The index comprises all data on transactions in real

property (houses and apartments) in the Republic of Croatia, collected from real property transfer tax returns filed with the Ministry of Finance (Tax Administration) according to preset deadlines. The house price index is compiled pursuant to Commission Regulation (EU) No 93/2013 of 1 February 2013 laying down detailed rules for the implementation of Council Regulation (EC) No 2494/95 concerning harmonised indices of consumer prices, as regards owner-occupied housing price indices, for the categories of new and existing dwellings and for the category "total" at the level of the Republic of Croatia. To meet user needs, the CBS additionally defined three geographical areas - the City of Zagreb, the Adriatic Coast and the rest of Croatia ("Other"). The house price index is calculated in accordance with the methodological guidelines contained in Eurostat's "Handbook on Residential Property Prices Indices". The main source of data for the compilation of weights is the value of transactions in residential properties purchased in the previous year. The weights are recalculated according to trends in residential property prices in the last quarter of the previous year. The index is calculated on the basis of predefined hedonic regression models, whose variables are defined based on available data on residential property features. For the period until the end of 2011, indices are calculated using the time dummy variable method, and for the period from the first quarter of 2012 onwards, due to the availability of a wider range of data on residential property features, using the rolling window time dummy variable method. The indices are then aggregated according to the Laspeyres formula to higher levels and to the total level.

a Indices (from first quarter 2017, a common index reference period for the house price index has been 2015 = 100).

Note: To meet user needs, the Croatian Bureau of Statistics and the Croatian National Bank cooperated in the calculation of an extended quarterly index series starting from the first quarter of 2002, when data of the Ministry of Finance (Tax Administration) have become available for the category "Total" and for three defined geographical areas – the City of Zagreb, the Adriatic Coast and the rest of Croatia ("Other"). b. According to the Eurostat practice, changes in the reference year caused revisions of previously published change rates due to the fact that change rates calculated from the 2015 = 100 series calculated from the 2010 = 100 series due to rounding of

Note: From January 2016, data on average monthly net wages starting from January 2015 were gathered from administrative data source (JOPPD form) and therefore are not comparable with previously published monthly data (January 1992 - December 2014).

Source: Croatian Bureau of Statistics.

Table J4 Average monthly net wages • The average monthly paid off net wage in the Republic of Croatia is calculated and published by the Croatian Bureau of Statistics (CBS). In accordance with the definition, the average monthly paid off net wage comprises income of a person in employment earned for work done during regular working hours as well as annual leave, paid leave, public holidays and day-offs as prescribed by law, sickness leave up to 42 days, absence for continuing professional education, during lay-off and job stop caused against person's will

and of no fault of his own, worker's meals and net pays on the basis of compensations, allowances and rewards in sums which are subject to contributions, taxes and surtaxes. From January 2016, data on the average monthly paid off net wages for the period from January 2015 onwards were gathered by processing the administrative sources of data from the "Report on income, income tax and surtax as well as contributions for mandatory insurances" – JOPPD forms and are not comparable to previously published monthly data.

Table J5 Consumer confidence index, consumer expectations index and consumer sentiment index • The Consumer Confidence Survey has been carried out regularly since April 1999 in accordance with the methodology of the European Commission, the Joint Harmonised EU Programme of Business and Consumer Surveys. Until April 2005, the survey was conducted once a quarter (in January, April, July and October). As of May 2005, the survey is carried out in monthly frequency in cooperation with the European Commission, using its technical and financial assistance.

The questionnaire contains 23 questions, examining consumer perception of the changes as regards every-day economic issues. The value of the response index is determined in line with the set methodology, based on the responses to the questions from the Consumer Confidence Survey. The movements of three composite indices, consumer confidence index (CCI), consumer sentiment index (CSI) and consumer expectations index (CEI), are calculated and monitored based on the value of the response indices. Each of the said composite indices is calculated as the arithmetic average of the response indices (I), i.e. as the average of previously quantified responses to individual questions from the survey:

$$I_i = \sum_{i=1}^{k} r_i \cdot w_i$$

where: r is the value of the response, w is the share of respondents opting for a particular response (weight), i question from

the questionnaire, z is the offered/chosen response, k is the number of offered responses to a particular question. The value of the said indices ranges  $-100 < I_i < 100$ . Higher index values than those recorded over the previous period point to an increase in expectations (optimism) as regards the specific segment covered by the particular question.

The table shows the values of chosen response indices for the following questions:

- I1: How has the financial situation of your household changed over the last 12 months?
- 12: How do you expect the financial position of your household to change over the next 12 months?
- 13: How do you think the general economic situation in Croatia has changed over the past 12 months?
- I4: How do you expect the general economic situation in Croatia to develop over the next 12 months?
- I8: In view of the general economic situation, do you think now is the right moment for people to make major purchases such as furniture, electrical/electronic devices, etc.?
- 19: How do you expect the consumption of durable goods to change over the next 12 months, compared to the previous 12 months?

The components of composite indices are as follows:

CCI: I1, I2, I4, I9

CEI: I2, I4

CSI: I1, I3, I8.

## List of banks and savings banks

### 1 September 2023

#### Authorised banks<sup>1</sup>

Ordinal no.	Personal ID number	Identification number	Name of bank
1.	14036333877	01198947	Addiko Bank d.d., Zagreb
2.	70663193635	00560286	Agram banka d.d., Zagreb
3.	33039197637	01326287	Banka Kovanica d.d., Varaždin
