#### Capital Market Development in Emerging Economies: Challenges Ahead

Hotel "Grand Villa Argentina", Dubrovnik June 12 -14, 2013 Draft version

Please do not quote

# Capital Market Development in Emerging Economies: Challenges Ahead

Sergio Schmukler World Bank

19th Dubrovnik Economic Conference June 12- June 14, 2013 Dubrovnik, Croatia

- Two important questions:
- 1. What are <u>some</u> of the challenges in financial development (FD)?
- 2. What is the role of institutional investors in this process and in these challenges?

- Only selected challenges in FD (not stability)
- Developing country/emerging market (EM) perspective
- Capital markets and institutional investors (not specifically banks)
- Bird's eye view—wide range of issues
- Scattered evidence from different sources
- Go through the evidence first
- Discuss policy issues later

- Over the last two decades, big push to develop financial markets
- From a bank-based model to a more complete model
- Savings through capital markets with dispersed ownership
- Widespread access to finance to all firms
- "U.S. model"
- As a consequence of all the reforms and efforts, markets have indeed developed and integrated
- Also become significantly more complex and interconnected

- Large institutional investors expected to play a crucial role
- Retirement (in addition to voluntary) savings
- Channeled through asset managers, particularly mutual funds and pension funds
- Invest in many companies and countries
- Informed investors, able to make independent decisions
- Invest long term
- Take advantage of arbitrage opportunities
- Absorb shocks, particularly equity investors
- Help stabilize and develop the financial system

- Despite many new developments, many challenges remain
- Large heterogeneity across regions and countries
  - No convergence yet advanced economies developed even more
  - > Many of the improvements centered in certain areas, and countries
- Many shortcomings in several important EMs
  - Bank credit stagnated in various countries
  - > Firm financing from banks decreased in relative terms
  - Bond markets expanded, but with limitations
  - In banks and bonds, public sector still captures significant share
  - > Equity markets still small, illiquid, and concentrated in large firms
  - Institutional investors sophisticated and large in several countries, but with much more limited role than previously thought

- Far away from model of dispersed ownership and participation
- Supply versus demand effects
  - Constraints not on lack of available funds: domestic & foreign savers
  - Many assets available for investment not purchased by institutional investors or foreigners, which hold large resources
  - Institutional investors seem to shy away from risk
  - Incentives to banks to move first into relatively easy markets (consumer, leasing, services), after big corporations left to capital markets
  - Incentives to asset managers and the overall functioning of financial systems does not contribute to expectations

- Many firms not becoming public or not accessing markets
  - Capital markets service only few firms, with increasing size and concentration domestically and abroad
  - Substantial financing through retained earnings and banks
- Regulations do not seem to be the main obstacle
- Several challenges ahead
  - Growing savings
  - Role of financial intermediaries
  - Need for more risk taking paired with stability
  - Spillovers to all firms
  - Need to catch up
  - Complexities and interconnectedness

#### Outline

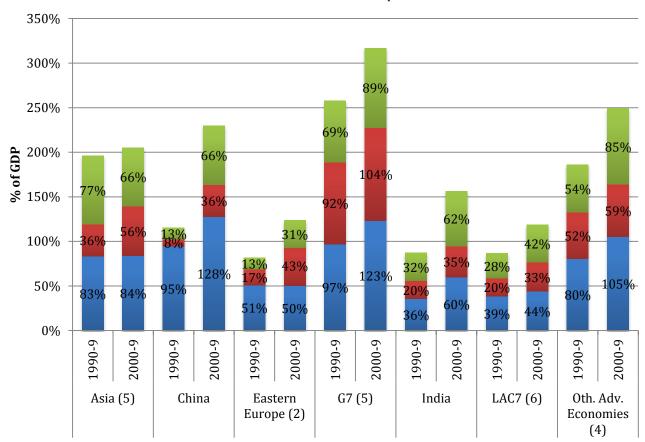

- Financial development: banks, bond markets, stock markets
- Institutional investors

### Outline

### Outline

- Financial development: banks, bond and stock markets
- Institutional investors

### **Organization of the Evidence**

- Hard to have a unified framework to analyze the evidence
- Findings from different papers using data from Chile, the U.S., and the world financial centers
- Findings on different aspects of institutional investor behavior, in particular their asset allocation
- Emphasis on regulated investors (mutual funds & pension funds)
- Food for thought
  - Role of institutional investors
  - Incentives at the manager and investor level
  - Public policy

### **Evidence on Institutional Investors**

- Overview
  - Size of pension funds and mutual funds
  - Asset allocation
- Pension funds in Chile
  - Trading and herding
  - Long-term investors?
- International evidence
  - Diversification
  - Pro-cyclicality
  - Benchmark effect

#### Equity Mutual Funds Appear to Follow their Benchmarks to a Great Extent

Israel's Upgrade from the Emerging Market Index to Developed Market Index

#### **Concluding Remarks: Bottom Line**

- In terms of financial development, substantially different and better than before, even when "insurmountable"
  - > Deeper systems, in domestic and international fronts
  - More saving and more resources available in the economy
  - Less crowding out by governments, but governments still large
  - > According to some measures, consumers appear to be better served
  - Financial system more complex, somewhat more diversified
    - Not that much bank-based
    - Bonds and equity play bigger role, corporate bonds emerging
    - Institutional investors much more prominent
  - Nature of financing is also changing

## **Concluding Remarks: Bottom Line**

- But no finance for all!
  - Financial development through capital markets not spread to all firms
- Constraints not on the supply side of funds
- Constraints not on the availability of investable assets
- Constraints likely not on specific regulatory issues
  - > These get much attention at country level, but this is a cross-country issue
- Financial intermediation process more difficult than thought
  - First expands to areas relatively easy to finance
  - Incentives might play crucial role for more risk taking
  - Might not yield socially optimal outcome
  - Financial intermediaries brain of the economy,
  - ... but works differently than expected

#### **Concluding Remarks: Bottom Line**

- Not clear how to proceed in many areas
  - Institutional investors are emblematic
  - Similarly with banks, capital markets, and financial integration
- Nor what to expect of capital market financing
- Plus lack of obvious paradigm at international level
  - Collapse of role models: no roadmap after the crisis
  - E.g. what to make of securitization and mortgage financing?
- Eventually, need to catch up, grow, and take risk without undermining stability: strong trade-off
  - Macro-prudential policies might not help
  - Hard to distinguish spurious boom from leapfrog
  - Especially for lagging areas and countries

#### Some of the General Policy Challenges

- Generate healthy competition among financial intermediaries without perverse incentives
- Promote market discipline through standardization
- Foster benchmarking without boosting short-termism, herding, and volatility
- Foster long-term risk while being able to monitor managers
- Contrarian behavior and long-term arbitrage opportunities without generating backlash due to negative outcomes
- Take advantage of useful international diversification

#### **Going Long and Riskier**

- Asset managers, including pension funds
  - Large chunk of domestic savings intermediated by asset managers
  - Spend significant part of fees in marketing perhaps could be diverted to asset management?
  - > Avoid risk taking, forgoing good long-term returns for investors ...
  - > ... and risk capital for corporations
  - > But at the same time shield them from volatility
  - Herd to be close to the pack
- Difficult task to change investment model
  - Without "excessive" risk taking
  - Without alienating investors
  - Generating proper incentives

#### **Problems Are Widespread**

- U.S. and developed countries' institutional investors too present some odd investment patterns
- Invest in few stocks
- Do not share information within companies
- Are pro-cyclical even when investing in equities and even when shocks have already hit them
- Are subject to shocks from investors
- Follow benchmarks, which adds to pro-cyclicality
- Organizational problems seem to pervade the industry
- No clear alternative model

Thank you!
