Consolidated central government balance (as % of GDP) <sup>f</sup>	....	....	....	-6.5	-7.1	-6.7	-4.5	-4.6	-4.6	-3.4
Unemployment rate (ILO, persons above 15 years of age) <sup>g</sup>	10.0	9.9	11.4	13.6	16.1	15.8	14.8	14.3	13.8	12.7
Employment rate (ILO, persons above 15 years of age) <sup>g</sup>	50.6	49.3	47.0	44.8	42.6	41.8	43.3	43.1	43.5	43.3

<sup>a</sup> Calculated by applying the average annual exchange rate (HRK/1 EUR) to the GDP in kuna terms.

<sup>b</sup> Inflation rate was measured by the RPI in the 1994-1998 period. From 1999 on, it is measured by the CPI.

<sup>c</sup> Preliminary data.

<sup>d</sup> External debt indicators for the period 1998-2005 are shown on a gross basis, while the indicators for the period up to 1997 do not include interest arrears and accrual interest, hybrid and subordinated instruments, repo transactions of banks and the CNB, deposits of international financial institutions with the CNB, and one-sided effects of the secondary bond market.

<sup>e</sup> Includes principal payments on long-term debt net of principal payments on trade credits and direct investments, as well as total interest payments net of interest payments on direct investments.

<sup>f</sup> Cash basis (GFS 1986).

<sup>g</sup> Employment and unemployment rates as at November 1996 and as at June 1997.

# Information on Economic Trends

# Real Sector

Monthly economic indicators from early in the third quarter suggest positive trends in the real sector. Having held steady at the beginning of the year, industrial production recovered strongly at mid-year. Although the base period effect both determined and concealed its annual trends, its annual rates of change were positively affected already by the July growth. According to seasonally and calendar adjusted data, the annual growth of the total industrial production volume accelerated from 0.6% in June to 4.9% in July, with the result that industrial production rose by 3.4% in the first seven months this year compared with the same period last year (this increase in the January to July 2005 period compared with the January to July 2004 period was 4.6%).

Industrial production growth in the observed period was stimulated both by domestic and foreign demand. As shown by CBS's nominal, seasonally adjusted data on merchandise

trade, consumer goods exports stagnated, with domestic market demand for these products being met mostly from accumulated stocks. At the same time, strong investment demand continued to be reflected in capital goods imports. The largest increase in the observed period was that of intermediate goods, both in terms of their manufacture and imports, which was partly related to expectations of favourable construction trends.

The upsurge in industrial production in July 2006 was mainly generated by a strong performance of manufacturing, accounting for over 80% of total industrial production.

According to seasonally adjusted data, manufacturing grew by 4.7% in July over the same month last year, with the largest contributions to growth coming from the machinery and equipment, food and beverages, and radio, television and communication equipment and apparatus divisions. In contrast, manufacture of chemicals and chemical products, other transport equipment and tobacco products negatively contributed to annual manufacturing trends.

Energy supply (electricity, gas and water) stabilised in the first half of 2006 at the levels reached early in the year, in consequence of which its cumulative rates of change continued to decline slightly. This industrial section's output rose by 3.5% in the first seven months of this year relative to the same period in the previous year.

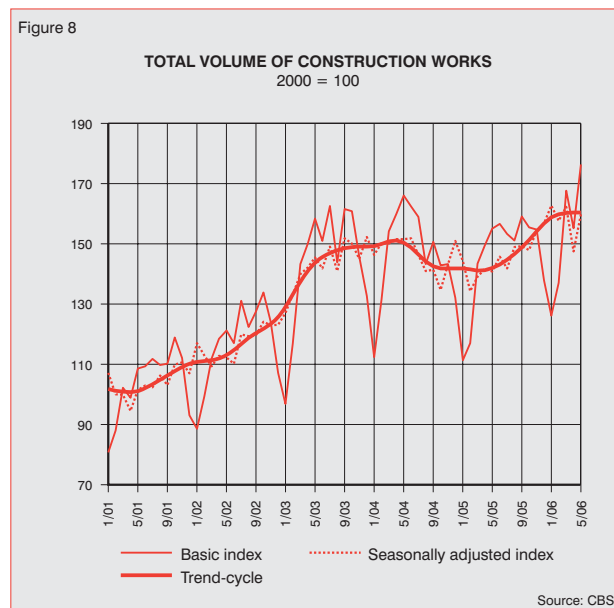

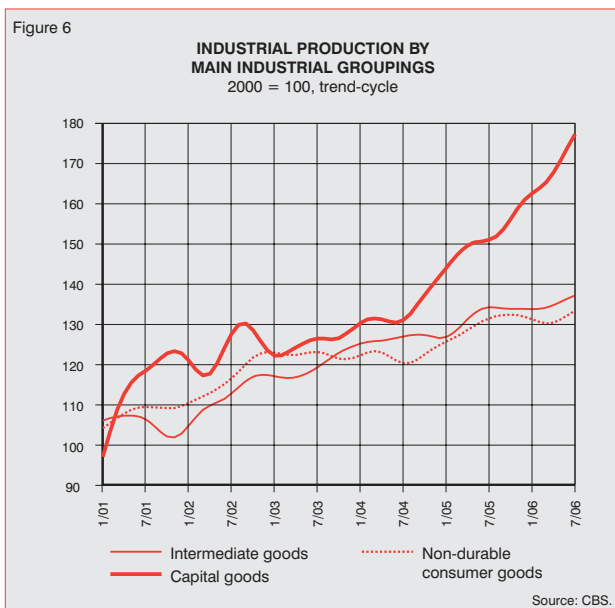

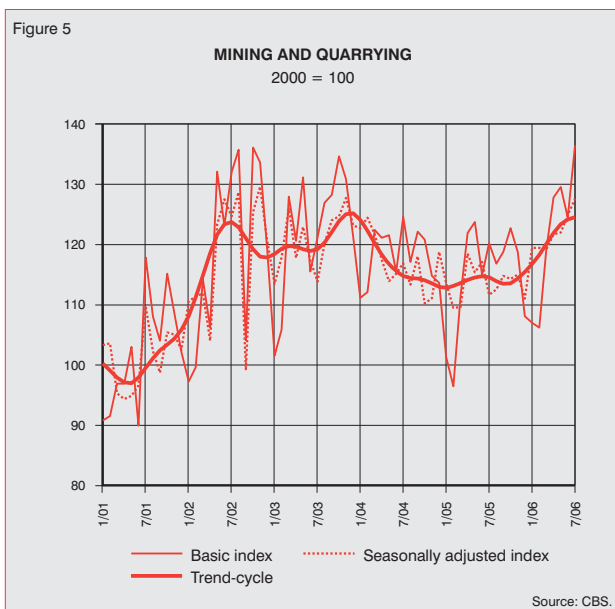

Mining and quarrying, in contrast, advanced at an annual rate of 14.2% in July, the highest since September 2003, continuing a positive trend from early 2006. As shown by nominal CBS data on merchandise trade by the NCEA, imports derived from mining and quarrying continued on a strong upward trend backed by rising domestic demand.

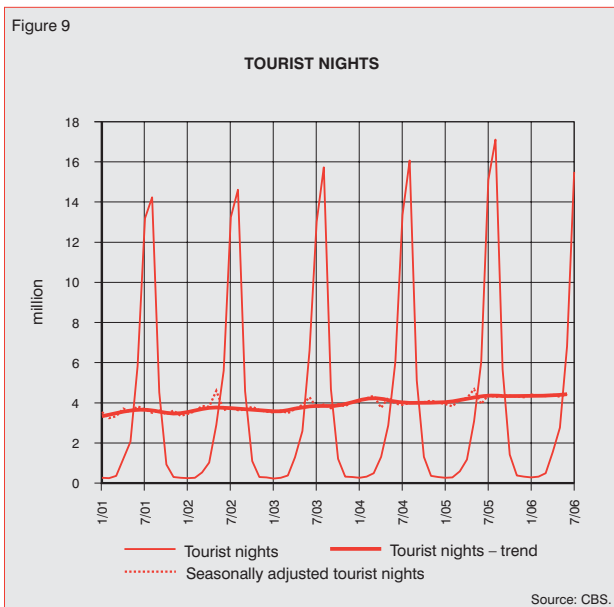

According to seasonally adjusted data, construction works rebounded in May this year, following an unexpected drop in their volume in April. The annual rates of change in construction works remained high in the first five months of 2006 (construction projects' cumulative growth exceeded 12.0% in that period), partly in consequence of this activity growing at an accelerated pace in the second part of 2005

and early in 2006. Given the value of net construction project orders, especially orders for works on buildings, the already mentioned positive developments in mining and extraction, as well as somewhat improved weather conditions, indications are that construction could further accelerate at mid-year. However, with data on construction project volume for that period being still unavailable, this remains only a tentative estimate.

Retail trade recovered early in the third quarter 2006, which also was reflected in its annual rates of change. Having dropped annually in May and June, real retail trade turnover rose, according to seasonally adjusted data, at an annual rate of 1.6% in July. With motor vehicles and motor fuels and lubricants excluded, retail trade rose at somewhat accelerated real annual rates at mid-year, primarily due to an increase in turnover in non-specialised stores with food, beverages or tobacco predominating.

As shown by CBS's volume indicators, last year's tourist arrivals and nights were slightly exceeded in July 2006, with

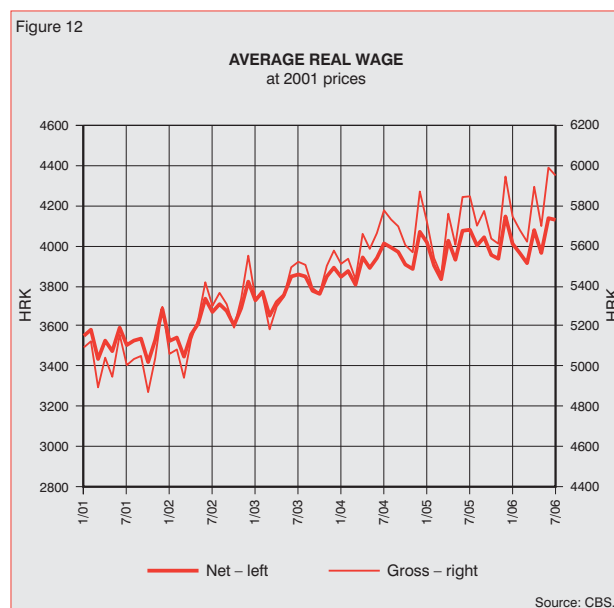

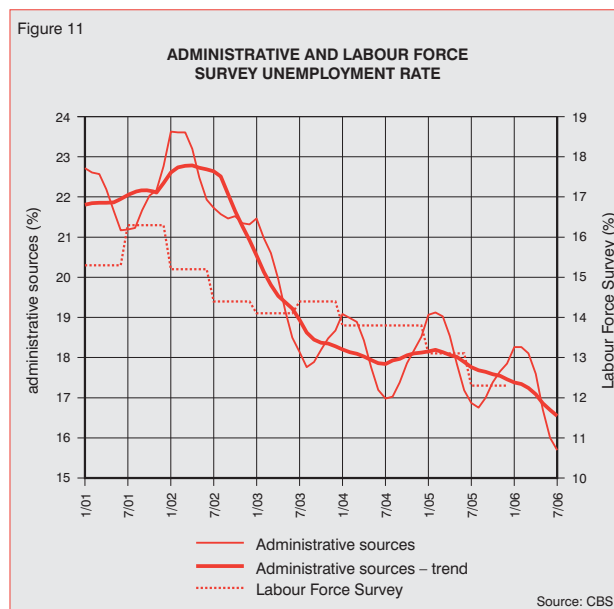

their annual growth slowing down as a result. The annual rate of change in total tourist nights stood at 2.7% in July, while arrivals increased by 1.1%. In consequence, the cumulative annual growth rate of tourist nights dropped from 7.0% in June to 4.5% in July and that of arrivals from 6.25% in June to 3.9% in July, with domestic tourists' individual arrivals and nights rising considerably in July. The tourists from Germany, Slovenia and the Czech Republic accounted for the largest shares of foreign tourists' nights, 16.2%, 15.5% and 10.3% respectively.

## Employment and Wages

Favourable trends in the labour market continued at mid-2006, mirroring positive economic trends in the same period. According to seasonally adjusted data, registered unemployment continued to decline, due to a reduced inflow into the CES register in July and a consequent slowdown in employment in that period. On account of this downturn trend, intensified by common seasonal effects, registered unemployment reduced for the seventh consecutive month, standing at 270 800 at end-July, a drop of 3 700 (1.4%) from end-June.

The number of insured with the CPIA, a reliable indicator of short-term employment trends, rose at an annual rate of 2.7% in June and July this year. Temporary CES and CBS employment data suggest continued moderate employment growth in the same period. Labour market trends resulted in the registered unemployment rate falling by 1.2 percentage points in July compared with the same month last year and, consequently, reaching its ten-year low of 15.7% at end-July.

Real gross and net wages rose further early in the third quarter 2006, a trend observed already in the second quarter. However, due to the base period effect of wage decrease in the second half of 2005, this rise failed to produce a considerable effect on their annual growth rate. The average gross wage thus rose at an annual rate of 1.8% and a cumula-

tive annual rate of 2% in July 2006, while real net wages grew 0.6 percentage points less in the same month, still reflecting tax progression effects.

## Prices

Consumer prices dropped by 0.8% in July 2006 from the previous month, mostly on account of a seasonal fall in prices of agricultural products and clothing and footwear. The year-on-year consumer price inflation rate decreased from 4.0% in June to 3.4% in July (0.6 percentage points). The core CPI declined by 0.4% in July from June, primarily due to the said price decrease in clothing and footwear. The year-on-year core inflation rate was down from 2.7% in June to 2.2% in July 2006.

Consumer prices rose by a slight 0.1% in August from the previous month, while the year-on-year inflation rate remained at 3.4%. The monthly price increase in August was principally accounted for by a rise in some administrative prices (e.g. of water supply, fuels and lubricants and hospital services). The prices of goods in the core inflation basket dropped by 0.1% in August from July, while the year-on-year core inflation rate remained stagnant at its July level of 2.2%.

Consumer Price Index, year-on-year rate of change

	Weight	6/2006	7/2006	8/2006

Services	23.1	5.6	5.3	5.9

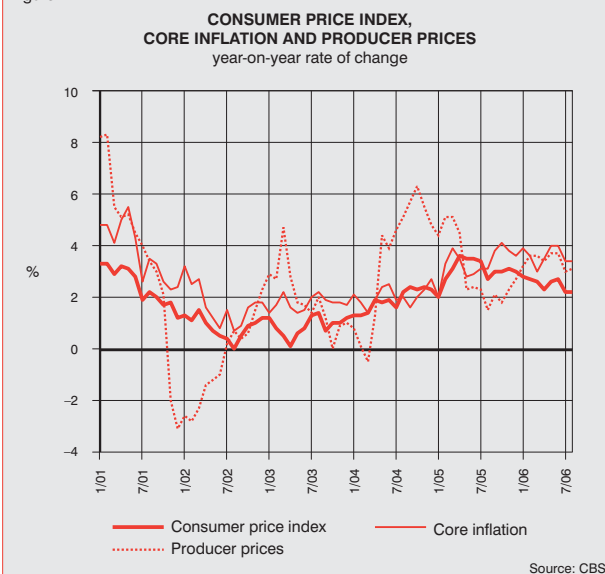

Source: CBS.

Figure 13

Source: CBS.

Figure 14

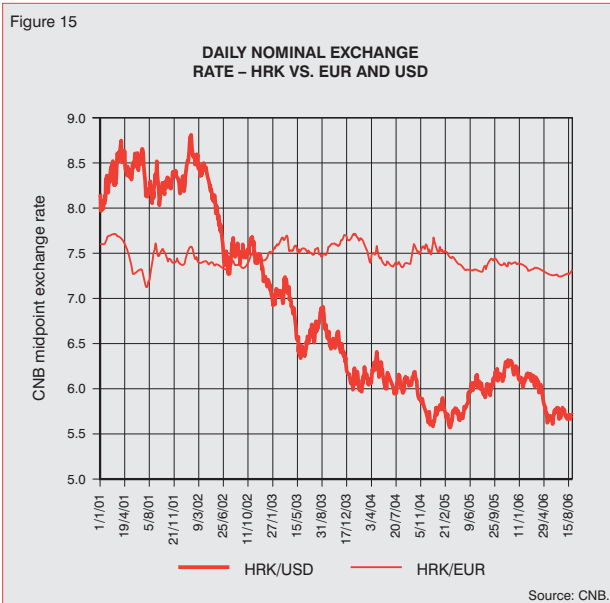

Source: CBS.

The producer price index of industrial products grew by 0.1% in July from the previous month, due to rising energy prices, pushed up by refined petroleum products' price increase, and to non-durable consumer goods price growth. Producer prices increased by 0.2% in August from the previous month, with the highest rise recorded in non-durable consumer goods prices, which continued on an upward trend from July. Having decreased from 3.7% in June to 3.0% in July, the year-on-year growth rate of producer price slightly accelerated in August, reaching 3.1%.

## Exchange Rate

The nominal kuna/euro exchange rate showed stable trends in July 2006, averaging around HRK 7.25/EUR. Standing at HRK 7.26/EUR at the month's end, the exchange rate dropped only by 0.02% from end-June, while it decreased to HRK 7.31/EUR at 31 August, weakening by 0.8% over that month. Corporate demand for foreign currency alleviated appreciation pressures generated by the seasonal increase in kuna demand, and this year also by a EUR 2.5bn government bond issue in July. Central bank foreign exchange interventions were therefore not required in July and August, with banks meeting their liquidity needs through CNB's regular reverse repo auctions. At end-August 2006, the kuna strengthened by 0.8% from end-2005 and by 0.9% from end-August 2005.

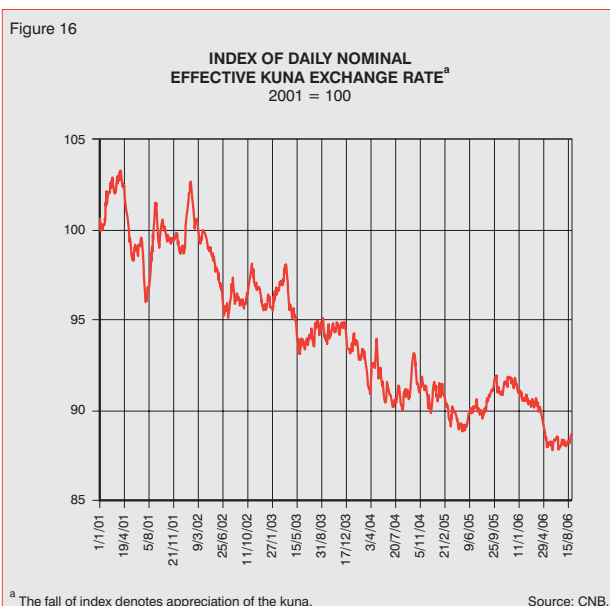

In consequence of the dollar's weakening against the euro in the international foreign exchange market, the kuna/US dollar exchange rate appreciated by 1.5% in July and August, rising from HRK 5.79/USD at end-June to HRK 5.70/USD at end-August 2006. ECB analysts believe that the US dollar appreciated against the euro in July due to weaker than expected economic indicators released in the US in that month, pointing, among other things, to a sluggish real estate market and the GDP growth rate slowdown in the second quarter (according to preliminary data). The dollar's depreciation against the euro in August was affected by the

narrowing of the interest rate spread between the US and the eurozone, caused by the increase in the ECB's benchmark rate, with the Fed's rate remaining unaltered.

In addition to depreciating against the euro and appreciating against the US dollar, in July and August the kuna weakened against other currencies included in the calculation of the index of the nominal effective exchange rate, i.e. by 0.02%, 0.8% and 3.3% against the Swiss franc, Slovene tolar and pound of sterling respectively. In consequence, the index of the daily nominal effective exchange rate of the kuna depreciated by 0.2% from 30 July to 31 August.

According to the latest available data for June 2006, the index of the real effective exchange rate deflated by consumer prices depreciated by 0.1% in June from the previous month, while the one deflated by producer prices depreciated by 0.5%. At the same time, the index of the nominal effective exchange rate appreciated by 0.04%, as an indication that domestic consumer and producer prices were rising at a slower pace than foreign prices.

## Monetary Developments

Monetary developments in July 2006 were marked by a sharp seasonal increase in domestic sources of funds, which enabled banks to considerably increase their net foreign assets while also maintaining growth of placements to the non-banking sector at the same level.

A strong seasonal increase in money (M1) in June and July was accompanied by a growth in its seasonally adjusted value, which is an indication of liquidity improvement. M1 reached HRK 45.0bn at end-July, growing annually by a high 17.5%.

Money surged by HRK 2.8bn in July alone, for the most part due to demand deposits growing by HRK 1.9bn in that month, mainly on account of an increase in corporate demand deposits brought about by intensified business activities in summer months and a rising corporate loan volume. Demand deposits stood at HRK 30.1bn at end-July, recording an annual growth rate of 19.6%, almost double the one in the same month the year before.

The other component of money, currency in circulation, increased by HRK 0.9bn in July. This monetary aggregate reached HRK 14.9bn at the month's end, rising annually by 13.4%.

In addition to money, also contributing to the sharp increase in domestic sources of funds were kuna non-monetary deposits, which rose by HRK 3.0bn (7.8%) in July, continuing on a marked upward trend from the first half of the year. As in the previous months, foreign currency indexed kuna deposits increased the most, accounting for almost half (46.9%) of total kuna non-monetary deposits at end-July. Besides the household sector upturn, kuna deposit growth was from early in the year fuelled by corporate sector deposits, which attained an annual growth rate of 62.5% at end-July. Kuna non-monetary deposits totalled HRK 41.4bn at end-July, while their annual growth rate was at 60.9% almost four times higher than at end-July 2005.

Rising by HRK 1.1bn in July, foreign currency deposits

halted their downward trend from early in the year. As shown by annual deposit growth rates in 2006, foreign currency deposit growth decelerated considerably, while foreign currency indexed kuna deposits accelerated.

Exchange rate effects excluded, the annual growth rate of foreign currency deposits declined to 2.7% at end-July, whereas it had stood at 8.4% at the end of the same month in 2005. The slowdown is especially noticeable in the corporate sector. Total foreign currency deposits amounted to HRK 82.1bn at end-July.

Due to the sharp rise in money and kuna quasi-money, total liquid assets (M4) grew by HRK 7.2bn (4.4%) in July. M4 reached HRK 170.3bn at end-July, rising annually at a high 17.0%.

With banks' financing of the non-banking sector facilitated by good liquidity arising from the growth of domestic sources of funds, placements continued to rise at a strong pace in July. Total placements reached HRK 166.7bn at the month's end, increasing by 24.3% annually, exclusive of

exchange rate effects.

Reaching HRK 88.0bn at end-July, household loans made up the largest share (HRK 1.6bn) in that month's total increase in placements (HRK 2.0bn), with their annual growth rate standing at a somewhat lower but still high 23.7%. Housing and general-purpose loans rose at the fastest rates of all household loans. Banks' corporate placements rose by a moderate HRK 0.4bn in July, so that their annual growth rate failed to accelerate. However, with corporate placements reaching HRK 75.1bn at end-July, this rate stood at 23.9%, exceeding that of household loans.

Banks' claims on the government dropped in July because of a considerable decrease in government liabilities to banks generated by a new kuna bond issue. These liabilities reduced by HRK 2.1bn, due to liabilities based on loans and issued T-bills decreasing by HRK 2.5bn and HRK 0.3bn respectively and to liabilities based on newly issued bonds rising by HRK 0.7bn. Banks' net claims on the central government amounted to HRK 21.9bn at end-July.

Figure 18

Figure 20

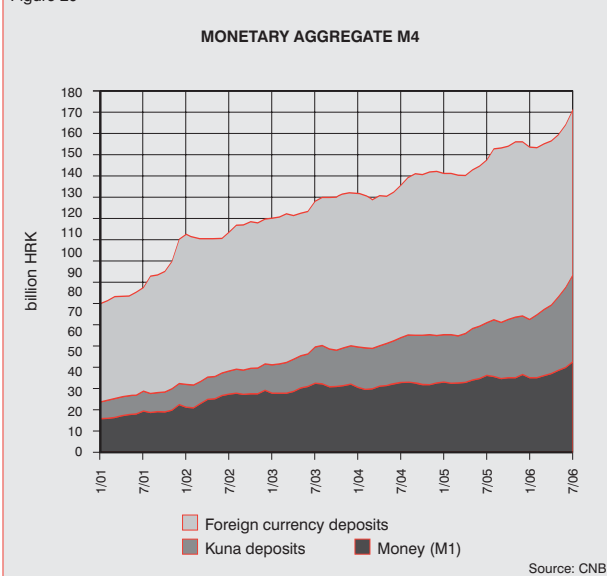

Figure 19

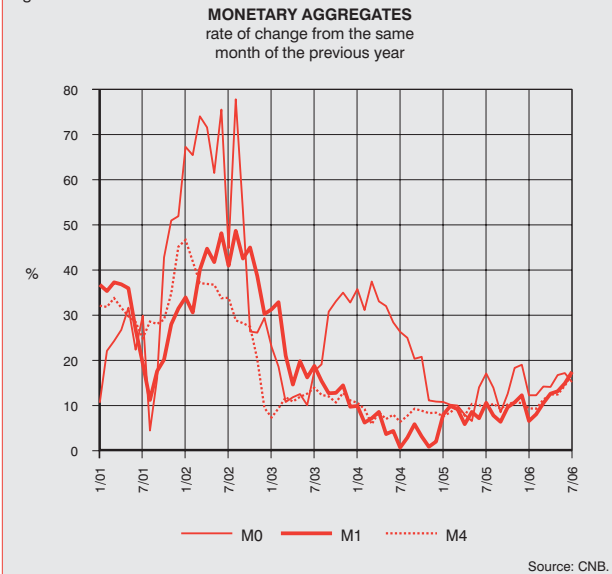

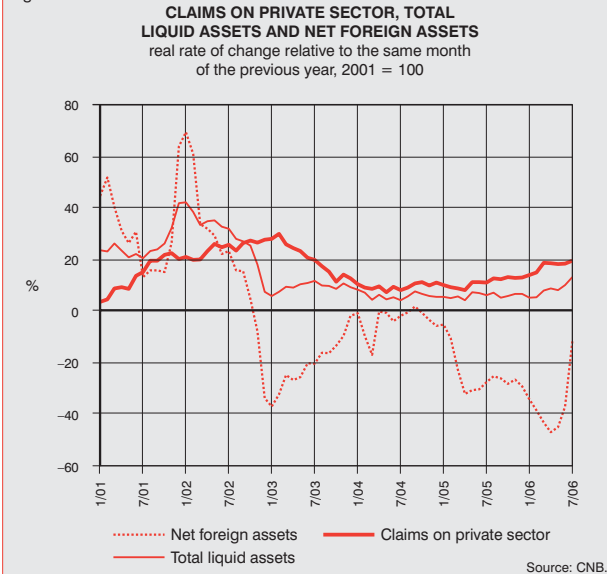

Figure 21

With foreign liabilities down by HRK 5.2bn and foreign assets up by HRK 0.4bn, banks' net foreign assets improved considerably in July, standing at HRK -43.9bn at the month's end, which is a rise of HRK 5.5bn over end-June this year.

Liquidity remained good in July and August following intensified central bank foreign currency purchases from banks in the previous two months, generating large kuna amounts. This was reflected in reduced reserve money creation through regular reverse repo auctions during the summer tourist season, when demand for kuna commonly rises, relative to the same period last year.

Reverse repo placements averaged HRK 1.0bn in July and August, compared with HRK 3.5bn in the same period in 2005. The turnover peaked at HRK 2.0bn early in the new reserve requirement maintenance period at mid-August, which coincided with a long holiday weekend and the height of the tourist season, when currency demand is at its highest level. The CNB accepted all bids, while the marginal repo

rate remained unaltered at 3.5%.

Reserve money (M0) grew in July and August, due to a rise in currency in circulation and an increase in kuna reserve requirement. Having hit a record high of HRK 15.6bn at mid-August, currency began to withdraw from circulation late in August as the tourist season neared its end. The kuna reserve requirement contributed more significantly to reserve money growth, due to a strong autonomous increase in the kuna reserve requirement calculation base. The calculated kuna reserve requirement stood at HRK 27.3bn in August, a rise of HRK 1bn over the end of the first half of the year.

With banks' foreign liabilities dropping sharply in July and August, the marginal reserve requirement decreased by EUR 266m in August. The foreign exchange reserve requirement, including the marginal reserve requirement, totalled HRK 18.0bn in kuna equivalent, dropping by HRK 1.9bn from end-June.

In consequence, CNB's international reserves amounted

Figure 22

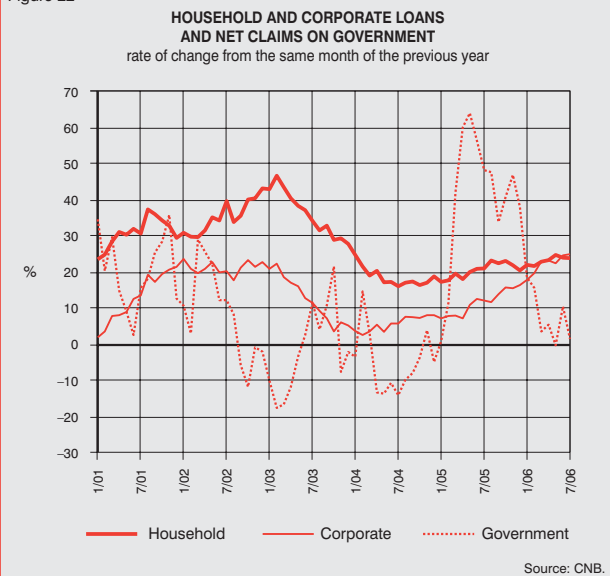

Figure 24

Figure 23

Figure 25

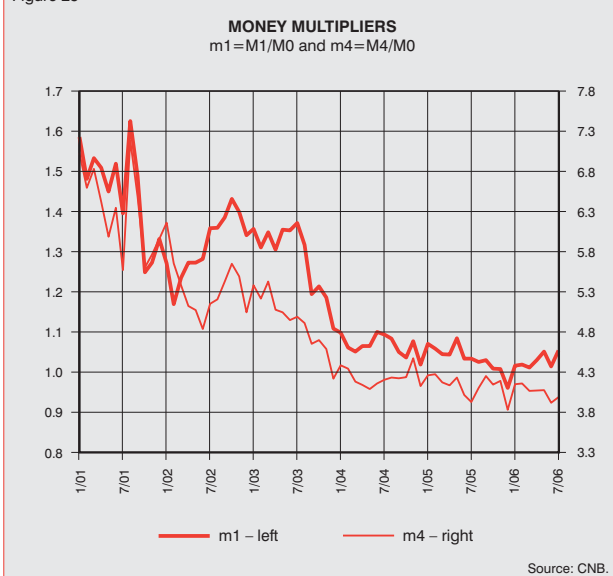

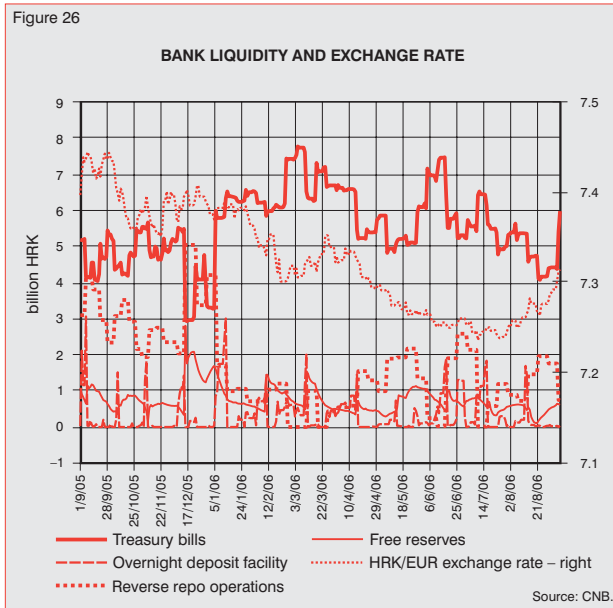

Figure 26

to EUR 8.674m at end-August, EUR 70m less than at end-June. However, this decrease in international reserves, i.e. in marginal reserve requirement, failed to decrease net usable international reserves, which rose by EUR 207m during the two summer months, standing at EUR 6.217m at end-August.

## Money Market and Interest Rates

Financial system kuna liquidity remained comfortable in July and August 2006, regardless of common seasonal pressures and a HRK 2.5bn worth government bond issue. The average amount of placements at CNB's reverse repo auctions dropped to HRK 0.7bn in July, rising to HRK 1.3bn in August, whereas the marginal repo rate held steady at 3.50%. Both July and August saw three MoF T-bills auc-

tions, while the stock of total subscribed T-bills rose further.

The largest share in ZMM turnover, slightly above 70%, was again held by overnight loans, with one-month loans prevailing among other loans. The weighted interest rate on overnight loans intermediated by the ZMM remained mostly unaltered in July, increasing to 1.96% in August, while their average daily turnover rose to HRK 88.5m and HRK 155.3m in July and August respectively. The weighted interest rate on other loans intermediated by the ZMM dropped to 3.06% at end-August, its record low since July 2003. The average daily turnover in these loans dipped slightly in July, growing to HRK 57.9m at end-August. The average daily turnover in overnight loans generated by direct interbank trading grew to HRK 777.3m in July, dropping to HRK 704.8m in August, while these loans' weighted interest rate increased to 2.47% and 2.72% in July and August respectively.

T-bills auctions in July saw weighted interest rates on 91-day bills decline to 2.94% compared with the previous

Figure 28

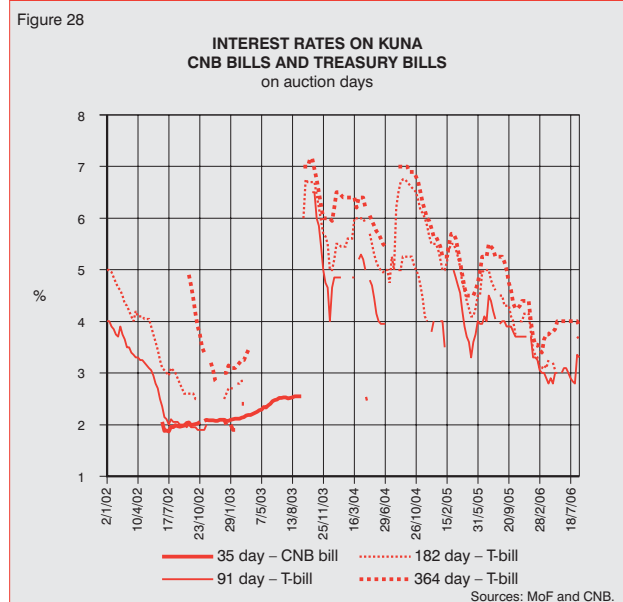

Figure 27

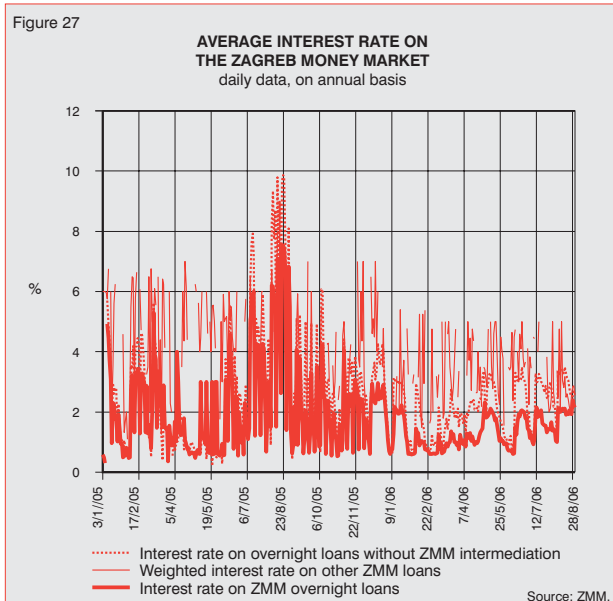

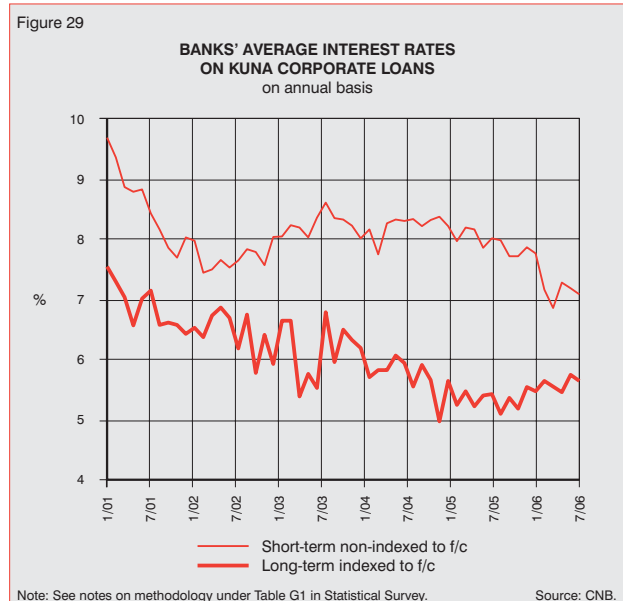

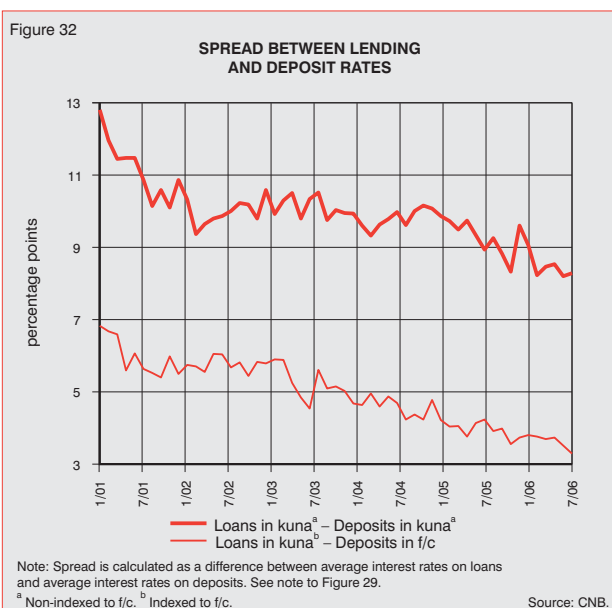

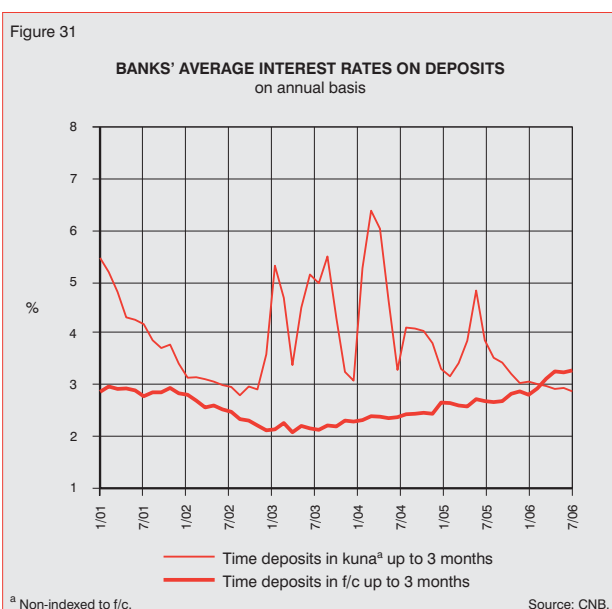

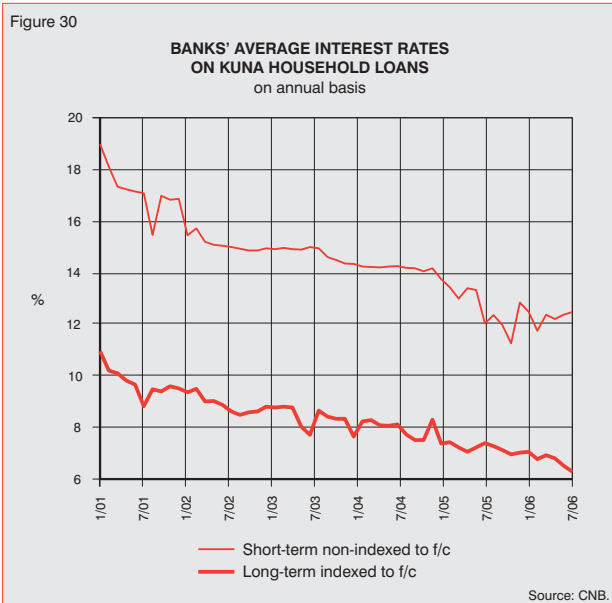

Figure 29

month, no 182-day bills subscribed and interest rates on 364-day bills remain at their June level of 4%. At August auctions, interest rates on 91-day bills rose to 3.10%, while those on 182-day bills reached a record high this year of 3.69%. Interest rates on 364-day bills drifted lower to 3.97%. The stock of subscribed T-bills advanced, amounting to HRK 12.3bn at end-August.

Banks' interest rates on short-term corporate loans decreased in June and July from May, while those on long-term loans increased. Interest rates on short-term household loans grew both in June and in July, while rates on long-term loans fell. Having drifted lower in May, deposit interest rates on foreign exchange sources of funds resumed their growth trend.

Weighted interest rates on short-term kuna corporate loans not indexed to foreign currency dropped in June and July from May, remaining at a relatively low 7.08% in July. The weighted interest rate on long-term kuna corporate loans indexed to foreign currency rose to 5.74% in June, dropping to 5.64% in July. The weighted interest rate on short-term household loans not indexed to foreign currency increased to 12.20%, 12.37% and 12.47% in May, June and July respectively. This was mostly in consequence of a price increase in overdraft loans, customarily accounting for the largest share in short-term household loans not indexed to foreign currency. In June this year, this share went up from 84.0% to 88.8% and the interest rate charged on overdrafts rose from 13.36% to 13.60% in July. The weighted interest rate on long-term kuna household loans indexed to foreign currency continued on the downward trend, dropping to 6.29% in July, its record low since January 2002.

Having edged up in June, the weighted interest rate on kuna time deposits not indexed to foreign currency with a maturity of up to three months dropped to 2.88% at end-July, its lowest level since May 2003. The weighted interest rate on foreign currency time deposits maturing in up to three months dipped in June, increasing slightly in July, up to 3.28%.

Due to a decrease in interest rates on foreign currency indexed kuna loans and a parallel increase in interest rates on foreign currency deposits, their spread narrowed further, hitting its record low of 3.29 percentage points at end-July. Also decreased were interest rates on kuna loans not indexed to foreign currency, while interest rates on kuna deposits increased somewhat. This in turn reduced their spread to 8.28 percentage points at end-July.

## Balance of Payments

According to the preliminary CBS data, total exports and imports of goods amounted to USD 5.7bn and USD 12.1bn, respectively, in the January-July period of 2006. The balance of foreign trade yielded a deficit USD 6.5bn, an increase of 11.9% from the same period last year. As a result of the faster growth in exports than imports, the imports/exports coverage rate improved from 46.2% in the first seven months of 2005 to 46.8% in the first seven months of 2006.

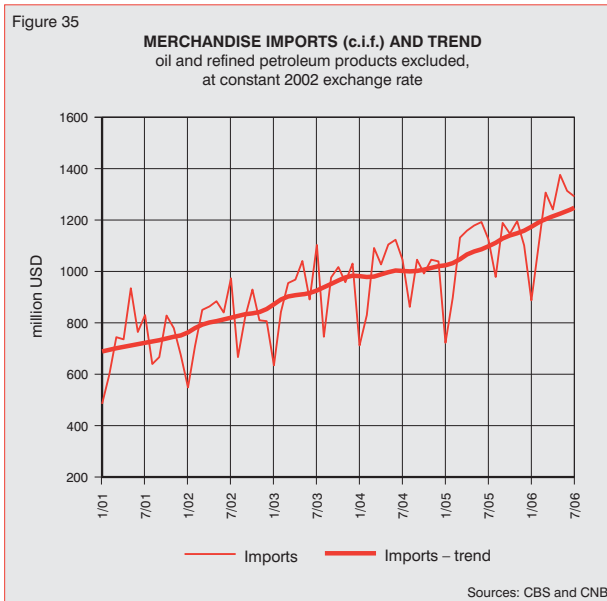

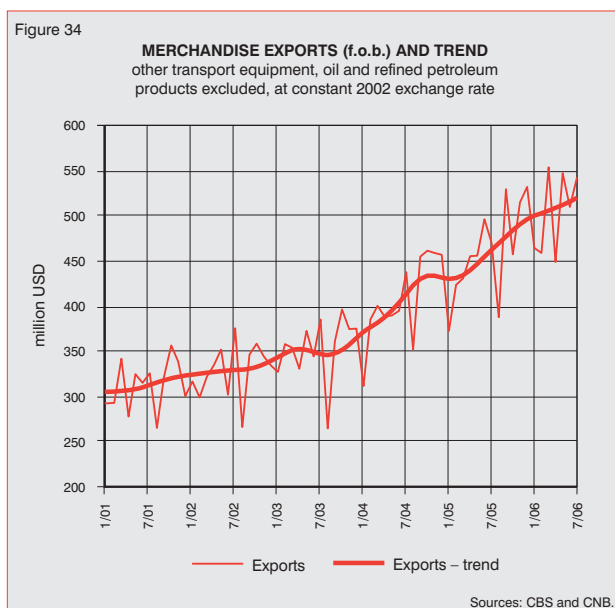

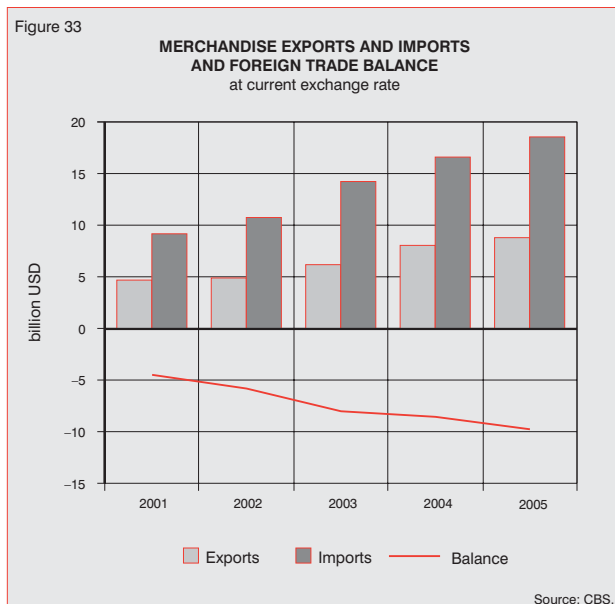

Measured at a constant exchange rate, total exports of

Balance of Payments (preliminary data), in million EUR

	Jan.–Mar. 2005	Jan.–Mar. 2006	Indices Jan.–Mar. 2005/ Jan.–Mar. 2006
Current account	-1,543.8	-1,993.3	129.1
Capital and financial account (excl. reserves)	1,370.7	2,206.1	160.9
CNB international reserves	-188.1	-672.6	357.6
Net errors and omissions	361.2	459.7	127.3

Source: CNB.

goods accelerated in the first seven months of 2006 and stood at 17.1% (8.4% in the same period last year). The main contributor to this was the increase in exports of other transport equipment (ships) of 34.7% year-on-year, which is partly attributed to the base period effect (exports of ship declined by 30.6% year-on-year in the January-July period of 2005). Another important factor contributing to the growth of total exports of goods was the sustained growth in exports of oil and refined petroleum products, helped by a further increase in their prices. Exports of all other SITC

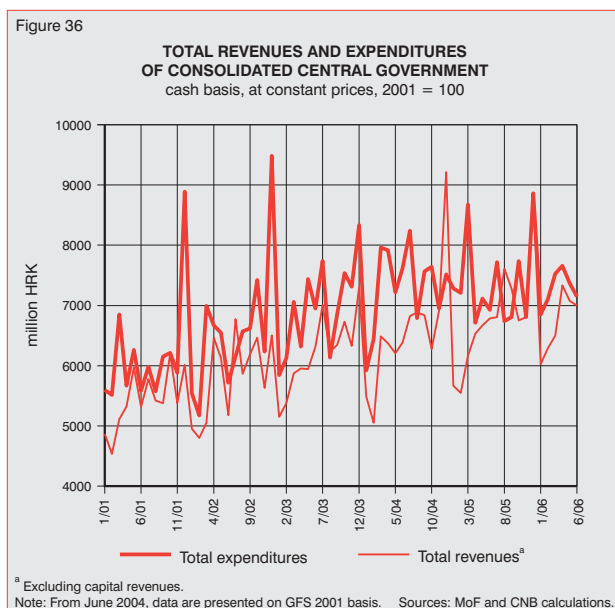

divisions slowed down to 13.6% year-on-year in the first seven months of 2006, down 1 percentage point over the same period last year. This was due to the slowdown in exports of wearing apparel, road vehicles and tobacco and tobacco manufactures. Concurrently, favourable results were achieved in exports of natural and industrial gas, fish and preparations, and coffee, tea, cocoa and spices.

Total imports of goods, measured at a constant exchange rate, grew by 16.5% year-on-year in the January-July period of 2006. However, this rate of growth was higher than that seen in the same period last year (11.4%). Almost one fifth of the registered growth in imports was accounted for by the increase in imports of oil and refined petroleum products. The 14.0% year-on-year growth in imports of road vehicles was the other significant contributor to the rise in total imports of goods. In contrast, imports of road vehicles went down by 7.1% year-on-year in the same period last year. As regards other SITC divisions, the year-on-year imports of natural and industrial gas, non-ferrous metals and manufactures of metals (n.e.c.) grew at strong rates. Imports of capital goods (machinery and transport equipment excluding other transport equipment and vehicles) accounted for 19.6% of total imports of goods, a development likely to help Croatia improve the quality and level of its exports.

## Government Finance

According to the latest MoF data, consolidated central government revenues amounted to HRK 47.2bn in the first six months of this year, increasing by a sharp 11.2% over the same period in 2005. The largest contributions came from VAT (up at an annual rate of 11.4%), social contributions (up 7.7%) and profit tax (up 30.6%). Excise revenues rose annually by 7% in the same period, with revenues from excises on tobacco products and excises on cars rising the most. Accounting for more than a half of total excise revenues, revenues from excises on refined petroleum products (including a levy for public road building and maintenance)

grew annually by 3.8%. In contrast, these revenues slightly declined in the same period last year.

Consolidated central government expenditures were HRK 47.6bn in the first half of 2006, an increase of HRK 1.6bn (3.5%) over the same period in 2005. The key contributors were social benefits, which rose by 3.5% in the observed period, and compensation of employees, which grew by 6% compared with the first half of 2005. In addition, expenditures for the use of goods and services increased annually, as well as expenditures for subsidies to private enterprises.

The consolidated central government deficit totalled HRK 3.8bn in the January to June 2006 period (on a cash basis and according to the GFS 1986), narrowing sharply by HRK 3.3bn (45.9%) from HRK 7.1bn in the same period in 2005. This was almost completely due to budgetary central government revenues growing at a faster pace than expenditures, and to a smaller extent to lower expenditures for the acquisition of non-financial assets incurred at the level of extrabudgetary users.

According to CNB data, central government debt (including CBRD debt) totalled HRK 107.9bn at end-June

#### Consolidated Central Government Balance (GFS 1986), in million HRK

Change in total debt stock	1,139.2
• Change in domestic debt stock	5,448.1
– Treasury bills	114.0
– Money market instruments	-0.9
– Bonds	359.5
– Credits from banks	4,975.5
• Change in external debt stock	-4,308.9
– Bonds	-4,432.7
– Credits	123.8
Memo item:	
• Change in total guarantees issued	519.4

Source: CNB.

2006, rising by HRK 1.1bn over end-2005. The increase in debt was exceeded by the consolidated central government deficit of HRK 3.8bn in the observed period, mostly due to the kuna exchange rate appreciating against the euro and US dollar and, as a result, alleviating debt increase in absolute terms, and partly to deficit financing by a reduction in currency and deposits. Central government domestic debt grew by HRK 5.4bn in the first half of 2006, mainly because of rising liabilities based on loans and those based on issued bonds and treasury bills. Central government external debt declined by HRK 4.3bn in the first six months of 2006, due to reduced liabilities on foreign bonds. At the same time, liabilities based on foreign loans edged up.

Croatia's contingent debt, i.e. issued government guarantees, net increased by HRK 0.5bn in the observed period, with domestic guarantees up by HRK 1.1bn and foreign guarantees down by HRK 0.6bn.

# Statistical Survey

## Classification and Presentation of Data on Claims and Liabilities

Data on financial institutions' claims and liabilities are classified according to institutional sectors and financial instruments. Institutional sectors are: financial institutions, central government and funds, other domestic sectors and foreign sector.

The financial institutions sector includes the following sub-sectors: monetary authorities (the central bank), banks, other banking institutions and non-banking financial institutions. The central bank is the Croatian National Bank (CNB). Banks are institutions to which the Croatian National Bank has issued a license to perform banking business services in accordance with the Banking Act, including savings banks during a transition period. Data on banks do not include claims and liabilities of banks undergoing bankruptcy proceedings, nor former branches of banks headquartered outside the Republic of Croatia. Other banking institutions comprise housing savings banks, savings and loan cooperatives and investment funds. Non-banking financial institutions are financial institutions not classified as banks or other banking institutions (for example insurance companies, pension funds).

The central government and funds consists of two sub-sectors, the Republic of Croatia and central government funds. Until December 2003, the sub-sector the Republic of Croatia included government authorities, including the Croatian Roads and the Croatian High-

ways, the State Agency for Deposit Insurance and Bank Rehabilitation and the sub-sector central government funds included the Croatian Institute for Health Insurance, the Croatian Pension Insurance Institute, the Croatian Employment Service, the Croatian Privatisation Fund, the Croatian Waters and the Croatian Bank for Reconstruction and Development.

Since January 2004, the Croatian Roads, the Croatian Highways, and the State Agency for Deposit Insurance and Bank Rehabilitation have been reclassified, from the sub-sector the Republic of Croatia to the sub-sector central government funds.

Other domestic sectors include local government authorities, public and other enterprises and households, including craftsmen and non-profit institutions providing services to households. The sub-sector other enterprises also comprises banks undergoing bankruptcy proceedings. In some tables other domestic sectors are divided into the following sub-sectors: local government (which comprises units of local and regional self-government), public and other enterprises, and households (including craftsmen and non-profit institutions).

Foreign sector includes foreign legal and natural persons.

All data on claims and liabilities refer to balances at the end of the reporting period. Foreign exchange items are reported in their kuna equivalent at the CNB's midpoint exchange rate at the end of the reporting period.

<sup>a</sup> Domestic credit decreased by a one-off HRK 2,759.4m.**Table A1: Monetary and Credit Aggregates**

The table shows data on some basic monetary and credit aggregates, including their monthly growth rates. In September 1999, all the monetary aggregates were revised. In previous publications of the CNB, data on claims and obligations of savings banks were not included in the compilation of the monetary aggregates.

Reserve money is taken over in its entirety from the Monetary Authorities Accounts (Table C1).

Money (M1) is defined in the same way as the corresponding item in the Monetary Survey (Table B1). It comprises currency outside banks, deposits with the CNB by other banking institutions and other domestic sectors as well as banks' demand deposits. Money (M1a) comprises currency outside banks and banks' demand deposits, increased by the demand deposits of the central government and funds with banks.

Broadest money (M4) comprises Money (M1), savings and time deposits, foreign currency deposits as well as bonds and money market instruments (all components are taken over from the Monetary Survey, Table B1).

Net domestic assets are defined as a difference between total liquid assets and foreign assets (net).

Domestic credit comprises banks' claims on other domestic sectors, other banking institutions and non-banking financial institutions.

In May 1999, bankruptcy proceedings have been initiated against several banks so their assets and liabilities are excluded from monetary statistics. In April 1999, those banks' share in monetary aggregate M1 amounted to 259.5 million kuna and in monetary aggregate M4 amounted to 4,055.8 million kuna. Data for June 1999 are comparable with data for July 1999 if Domestic credit is increased by 3,513.5 million kuna.

<sup>a</sup> The first revaluation of securities with the effect of HRK 165.5m was conducted within the CNB's international reserves as at 31 December 2001. Accrued interest on deposits, with the effect of HRK 63.8m, was included in the international reserves as at 31 December 2001 as well. The CNB's foreign liabilities increased by HRK 6.4m on the basis of accrued interest, while liabilities on the basis of required foreign exchange reserves increased by HRK 8.6m.

**Table B1: Monetary Survey**

The monetary survey shows consolidated data from the Monetary Authorities Accounts (Table C1) and Banks' Accounts (Table D1).

Foreign assets (net) are the difference between total foreign assets and total foreign liabilities of the CNB and banks.

Domestic credit is the sum of corresponding items from Monetary Authorities Accounts and Banks' Accounts. Claims on central government and funds are reported on a net basis, i.e. decreased by central government and funds' deposits with the CNB and banks.

Money is the sum of currency outside banks, deposits by other

banking institutions with the CNB, deposits by other domestic sectors with the CNB and banks' demand deposits (item Demand deposits in Banks' Accounts, Table D1).

Items Savings and time deposits, Foreign currency deposits as well as Bonds and money market instruments are entirely taken over from the Banks' Accounts, while item Restricted and blocked deposits represents the sum of corresponding items from the Monetary Authorities Accounts (excluding banks' blocked deposits with the CNB) and Banks' Accounts. Other items (net) are unclassified liabilities decreased by unclassified assets.

**Table B2: Number of Reporting Banks and Savings Banks and their Classification by Total Assets**

**Table B2: Number of Reporting Banks and Savings Banks and their Classification by Total Assets**

The table shows the total number of banks and savings banks during the transition period which report monthly to the CNB. Their operations are shown in the Banks' Accounts. Monetary statistics includes reporting institutions under liquidation and, until February 2005, institutions whose operating licences have been revoked, but which have not initiated liquidation proceedings.

Special reporting requirements applied to savings banks until June 1995. Savings banks were not legally obliged to report on their operations, so that data up to June 1995 relate only to those savings banks that reported voluntarily to the CNB. From July 1995 on, the data cover all registered savings banks. Savings banks that were granted a bank operating license are required to adjust their operations to the provisions of the Banking Act by 31 December 2006.

The table also shows the classification of reporting banks and savings banks according to their total assets.

<sup>a</sup> From October 2001 to May 2003 Liabilities to foreign banks include also liabilities based on CNB bills subscribed by non-residents.

<sup>b</sup> In December 2002, CDA accounts with the CNB for the gross and net settlement of purchased securities have been reclassified from the sector central government to the sector other financial organisations.

**Table C1: Monetary Authorities Accounts**

The table reports data on claims and liabilities by monetary authorities.

Foreign assets include the following forms of foreign currency and kuna claims on foreign legal and natural persons: monetary gold, holdings of special drawing rights, foreign cash in vault, reserve position in the International Monetary Fund, current account balances with foreign banks, time deposits with foreign banks and accrued interest, foreign currency security investments and other claims.

Claims on central government and funds are loans and overdue claims on the budget of the Republic of Croatia. In accordance with the Croatian National Bank Act that entered into force in April 2001, the Croatian National Bank may not extend credit to the Republic of Croatia. Hence, this item comprises only overdue claims on the budget of the Republic of Croatia based on the payment system operations and the liabilities to the IMF and foreign banks. Until April 2001, Claims in kuna were short-term loans granted for the purpose of overcoming timing differences between incoming revenues and execution of budgetary expenditures, long-term loans granted by special decrees by the government of the Republic of Croatia, and overdue claims on the budgetary central government, while Claims in foreign currency was a counter-entry to the liability to the IMF based on the succession of membership in that institution.

Claims on other domestic sectors are loans and overdue claims on other domestic sectors, including banks in bankruptcy proceedings.

Claims on banks are credits to banks and overdue claims on banks. Credits to banks comprise Lombard credits, short-term liquidity credits, other credits and reverse repo transactions. Item Lombard credits comprises credits to banks for regular maintaining of the day-to-day liquidity, which were replaced by lombard credits in December 1994. Short-term liquidity credits, which have been granted since the beginning of 1999, also serve to bridge liquidity problems. Other credits include intervention credits, special credits for bridging liquidity problems granted in the past (initial credits, prerehabilitation credits), due but unpaid credits and banks' deposits with the CNB. From April 2005 on, reverse repo transactions are conducted on a weekly basis. Overdue claims on banks comprise settlement account overdrafts (until mid-1994) and banks' failure to correctly and promptly allocate and maintain statutory reserve requirements.

Since May 1999, Claims on other domestic sectors include overdue claims on banks against which bankruptcy proceedings have been initiated. Due to the reclassification of savings banks from the

sub-sector other banking institutions to the sub-sector banks, data for Claims on banks and Claims on other banking institutions have been revised.

Reserve money consists of currency outside banks, cash in banks' vaults, banks' deposits with the CNB, other banking institutions' deposits and other domestic sectors' deposits with the CNB. Banks' deposits are: settlement account balances, statutory reserves deposited on a special account with the CNB (including, from March 2006, special reserve requirement on liabilities arising from issued securities), CNB bills on an obligatory basis and overnight deposits. Deposits by other banking institutions included, until September 2003, settlement account balances of housing savings banks. Deposits by other domestic sectors are other domestic sectors' giro account balances which, on the basis of legal acts are deposited with the Croatian National Bank.

Restricted and blocked deposits include required foreign exchange reserves and accrued interest, restricted deposits and blocked foreign exchange deposits. Banks are required to set aside the reserve requirements against certain foreign exchange sources of funds and the marginal reserve requirements (from August 2004 on) in special accounts at the Croatian National Bank. Restricted deposits are kuna funds set aside on the basis of a court order or legal regulation, kuna funds set aside in the period between May 1999 and April 2002 and deposits of banks against which bankruptcy proceedings have been initiated. Blocked foreign exchange deposits are funds that were set aside in special accounts at the Croatian National Bank for repaying unpaid amounts due to foreign creditors.

Foreign liabilities include use of IMF credits, liabilities to international financial institutions and foreign banks and accrued interest.

Central government and funds deposits are demand deposits and foreign currency deposits of the Republic of Croatia and central government funds with the CNB, and CNB bills purchased by central government institutions.

CNB bills are kuna and f/c CNB bills on a voluntary basis, excluding CNB bills voluntarily purchased by central government institutions.

Capital accounts include reserves, provisions and the income and cost accounts.

Other items (net) are unclassified liabilities decreased by unclassified assets of the Monetary Authorities Accounts.

Due to the reclassification of savings banks from the sub-sector other banking institutions to the sub-sector banks, data for Currency outside banks, Banks' cash in vaults, Banks' deposits and Deposits of other banking institutions were revised.

**Table D1: Banks' Accounts**

Banks' Accounts include data on banks' claims and liabilities. Banks' mutual claims and liabilities are consolidated.

Required reserves held at the central bank include kuna and foreign exchange reserves. Kuna reserves include vault cash and kuna funds held in accounts at the central bank. Foreign exchange reserves include foreign exchange held in CNB's foreign exchange accounts.

Foreign assets are the following forms of kuna and foreign currency claims on foreign legal and natural persons: foreign cash in vaults, deposits with foreign banks (including loro letters of credit and other collateral), securities, loans, and equities.

Claims on central government and funds are the following forms of claims in kuna and foreign currency: securities and loans.

Claims on other domestic sectors include the following claims in kuna and foreign currency: money market instruments, bonds, loans (including acceptances), and equities.

The same forms of kuna and foreign currency claims are included in claims on other banking institutions and non-banking financial institutions, with one difference: Claims on other banking institutions also include deposits with those institutions.

Items Demand deposits, Savings and time deposits, Foreign currency deposits as well as Bonds and money market instruments comprise banks' liabilities to other domestic sectors, other banking institutions and non-banking financial institutions.

Demand deposits include giro and current accounts balances and banks' obligations arising from kuna payment instruments issued, minus currency in the payment system, i.e. checks in banks' vaults and checks in collection.

Savings and time deposits are kuna sight deposits as well as kuna

time and notice deposits.

Foreign currency deposits are foreign currency sight deposits as well as foreign currency time and notice deposits.

Bonds and money market instruments are banks' liabilities for securities issued (net) and loans obtained. Issued subordinated and hybrid instruments, purchased by foreign investors, are excluded from this item.

Foreign liabilities comprise the following forms of kuna and foreign currency liabilities to foreign legal and natural persons: giro and current accounts, savings deposits (including loro letters of credit and other forms of collateral), time deposits, loans received and liabilities due. Issued subordinate and hybrid instruments, purchased by foreign investors, are also included in loans received. Central government and funds' deposits are all forms of banks' kuna and foreign currency liabilities (except restricted and blocked deposits) to the central government and funds.

Credit from central bank comprises loans obtained from the CNB and deposits by the CNB with banks. Repurchase of securities is also considered and treated as a loan.

Restricted and blocked deposits comprise the following banks' liabilities: kuna and foreign currency restricted deposits by other domestic sectors, other banking institutions, non-banking financial institutions, central government and funds as well as foreign legal and natural persons; and households' blocked foreign currency deposits, regulated by the Act on Converting Households' Foreign Exchange Deposits into the Public Debt of the Republic of Croatia.

Capital accounts are share capital, profit or loss for the previous and current year, retained earnings (loss), legal reserves, reserves provided for by the articles of association and other capital reserves, hedging reserves, unrealised gains (losses) from financial assets clas-

sified as available-for-sale assets, value adjustments and specific reserves for unidentified losses.

Other items (net) are unclassified liabilities decreased by unclassified assets, including the fair value of derivative financial instruments.

#### Tables: D2 – D12

This group of tables (with the exception of Table D5) represents an elaborate presentation of appropriate items of claims and liabilities of Banks' Accounts (Table D1).

#### Table D2: Banks' Foreign Assets

This table shows banks' claims on foreign legal and natural persons.

Foreign assets of banks' comprise foreign assets in kuna and foreign currency.

Claims on foreign banks and Claims on foreign non-banks (total and by financial instruments) are shown separately within both foreign assets in kuna and in foreign currency.

**Table D4: Banks' Claims on Other Domestic Sectors**

The table shows banks' kuna and foreign currency claims on other domestic sectors, classified according to financial instruments: money market instruments (including factoring and forfaiting since

January 2004), loans and advances (including acceptances and purchased claims), and equities.

Until October 1994, foreign currency loans could be granted only when banks simultaneously borrowed abroad in their own name and for the account of the end-user.

**Table D6: Demand Deposits with Banks**

The table shows demand deposits with banks, classified by domestic institutional sectors.

Demand deposits are the sum of other domestic sectors', other

banking institutions' and non-banking financial institutions' giro and current accounts balances, minus currency in the payment system (i.e. amount of checks in banks' vaults and checks in collection). Banks' obligations arising from kuna payment instruments issued are included in the household sector.

**Table D9: Bonds and Money Market Instruments**

The table shows banks' liabilities for securities issued (net) and loans received from other domestic sectors, other banking institutions and non-banking financial institutions.

Money market instruments (net) comprise banks' net liabilities for CNB bills, bills of exchange (issued and accepted) and other securities issued.

Bonds (net) comprise banks' net liabilities for kuna and foreign currency bonds issued, as well as issued subordinated and hybrid instruments, excluding those purchased by foreign investors.

Other domestic borrowing comprises loans received, reported total and classified by institutional sectors.

**Table D10: Banks' Foreign Liabilities**

The table shows banks' total foreign currency and kuna liabilities to foreign legal and natural persons, with the exception of restricted kuna and foreign currency deposits by foreign legal and natural persons.

Banks' foreign liabilities comprise foreign currency liabilities and

foreign kuna liabilities.

Within foreign kuna and foreign currency liabilities, liabilities to foreign banks are reported separately from liabilities to foreign non-banks (total and by financial instruments). Loans and advances also include issued subordinated and hybrid instruments purchased by foreign investors.

**Table D11: Central Government and Funds' Deposits with Banks**

The table reports total banks' kuna and foreign currency liabilities to the central government and funds, with the exception of restricted (kuna and foreign currency) deposits by the central government and funds with banks.

Kuna and foreign currency deposits by the Republic of Croatia and central government funds are shown separately. Kuna deposits comprise demand deposits, savings deposits, time and notice deposits, and loans obtained from the central government and funds. Foreign currency deposits comprise savings deposits, time and notice deposits, and refinanced loans.

**Table D12: Restricted and Blocked Deposits with Banks**

The table shows households' restricted deposits (kuna and foreign currency) and blocked deposits.

Restricted and blocked deposits include two categories of deposits: restricted (kuna and foreign currency) deposits and blocked for-

foreign currency deposits.

Blocked foreign currency deposits include households' foreign currency deposits regulated by the Act on Converting Households' Foreign Exchange Deposits into the Public Debt of the Republic of Croatia.

**Table E1: Housing Savings Banks' Accounts**

Housing savings banks' accounts include data on claims and liabilities of the Croatian housing savings banks. All housing savings banks' claims and liabilities refer exclusively to domestic sectors.

Housing savings banks' required reserves held at the central bank include funds in vaults. Until September 2003, they also included kuna funds held in accounts at the central bank.

Claims on central government and funds are claims in kuna on the Republic of Croatia and central government funds.

Claims on other domestic sectors include kuna loans to local government and households.

Claims on banks include loans extended to banks, as well as deposits with banks, including, since October 2003, accounts for regu-

lar operations with banks.

Claims on other banking institutions include investments in investment funds.

Item Time deposits includes local government and households' time deposits.

Bonds and money market instruments are housing savings banks' liabilities for securities issued (net) and loans obtained.

Capital accounts are share capital, profit or loss for the previous and current year, retained earnings (loss), legal reserves, reserves provided for by the articles of association and other capital reserves, hedging reserves, unrealised gains (losses) from financial assets classified as available-for-sale assets, value adjustments and specific reserves for unidentified losses. Other items (net) are unclassified liabilities decreased by unclassified assets.

**Table F1: Credit Rates of the Croatian National Bank**

<sup>a</sup> Weighted averages of weighted repo rates achieved at regular reverse repo auctions of the CNB in the reporting month.

<sup>b</sup> Breaks in the series of data are explained in notes on methodology.

<sup>c</sup> Since 14 December 2005.

**Table F1: Credit Rates of the Croatian National Bank**

The table shows interest rates used by the CNB to calculate and charge interest on credits from the primary issue and on all other claims.

Credit rates of the CNB are set by decisions of the Council of the Croatian National Bank, on annual basis. Exceptionally, from June 1995 interest rate charged by the CNB on Lombard credits was 1.5 percentage point higher than the weighted average interest rate on CNB bills on a voluntary basis (which serve as collateral for Lombard credits) in cases when the weighted average interest rate was higher than 16.5%. Congruently, from June 1995 to August 1996 the table reports the weighted average interest rate on Lombard credits.

Data shown in column 4 refer to weighted interest rates of weighted repo rates achieved at regular reverse repo auctions of the CNB in the reporting month.

Time series presented in the table contain certain breaks, due to changes in the CNB's monetary policy instruments.

Data shown in column 7 refer, until September 1994, to interest rates on special credits for savings deposits' payments and for pay-

ments from households' current accounts, and from October 1994 until September 1997 to interest rates on daily credits for savings deposits and households' current accounts in kuna. Daily credits, as opposed to special credits, are paid back on the same day. In October 1997, this instrument was replaced by daily credits for overcoming short-term liquidity problems that are collateralized by CNB bills. Since December 1998 until April 1999, this credit is incorporated in Lombard credit, applying different interest rate for its usage within one day.

Data shown in column 8 refer, until December 1994, to interest rate on initial credits, and since 18 March 1998, to credits for overcoming liquidity problems of banks under evaluation for entry into rehabilitation and restructuring procedures and since February 1999, to interest rates on short-term liquidity credits. Since December 1999, data show interest rates on short-term liquidity credit with a maturity over 3 months which is 1 percentage point higher than interest rate on Lombard credits. Interest rate on short-term liquidity credit up to 3 months is 0.5 percentage point higher than interest rate on Lombard credits.

<sup>a</sup> Breaks in the series of data are explained in notes on methodology. <sup>b</sup> Since 8 June 2005.

**Table F2: Deposit Rates of the Croatian National Bank**

The table shows interest rates used by the CNB to calculate and pay interest on funds deposited with the CNB and on issued securities.

Interest rates paid by the CNB for appropriated statutory reserve funds are set by a decision of the Council of the CNB. Until April 2005, the appropriated statutory reserve funds included the calculated statutory reserve funds that were deposit in a special statutory reserve account with the CNB, or maintained (in average) in bank's settlement accounts, or deposited in a special account with the CNB for the settlement of net positions in the NCS. From April 2005, they include the calculated statutory reserve funds allocated to a special statutory reserve account with the CNB (column 3).

Interest rates on CNB bills on an obligatory basis are set by a decision of the Council of the CNB. Interest rates on CNB bills on a voluntary basis are set at CNB bills' auction sales. Congruently, columns 5, 6 and 7 report weighted average interest rates attained at auctions of CNB bills.

From November 1994 through January 2001, columns 7 and 8 report interest rates on CNB bills on a voluntary basis due in 91 and 182 days respectively.

Since April 1998 columns 9 through 13 report weighted average interest rates on CNB bills on a voluntary basis in EUR and USD (until December 1998 in DEM and USD) attained at CNB bills' auctions as a weighted average of subscribed amounts in those two currencies.

Column 14 reports the interest rate on overnight deposits with the CNB.

**Table F3: Banks' Reserve Requirements**

**Table F3: Banks' Reserve Requirements**

This table shows data on monthly averages of day-to-day balances of banks' kuna and foreign currency reserve requirements with the CNB. Savings banks are included beginning in July 1999.

Column 3 shows the weighted average reserve requirement ratio as a percentage of the kuna and foreign currency reserve requirement in the reserve base.

Reserve requirement (column 4) represents the prescribed amount of funds banks are required to deposit in a special statutory reserve account with the CNB, or to maintain (in average) in their settlement accounts and in vaults, or in accounts of liquid foreign exchange claims (which include foreign currency cash and checks in foreign exchange, liquid foreign exchange claims maintained in the accounts with the high-grade foreign banks and foreign currency CNB bills).

Column 5 shows the amount of kuna reserve requirements. Between January 1995 and December 2000, this amount corresponded with the statutory reserve requirement instrument, while until December 1994 it comprised two instruments: statutory reserves and liquid assets requirement – LAR (except for the part in which banks were conforming to this requirement by registering CNB bills on a voluntary basis). In December 2000, reserve requirements in kuna and in foreign currency were unified, i.e. reserve requirements rate, periods for calculating, allocating and maintaining reserve requirements were unified, as well as a minimum percentage of the total reserve requirements deposited with the Croatian National Bank. Starting from September 2001, column 5 includes also the f/c component of reserve requirements that is set aside/maintained in kuna.

Column 6 shows the amount of foreign currency reserve requirements, i.e. the prescribed amount of funds banks are required to deposit in the CNB's foreign exchange accounts, or to maintain (in av-

erage) in accounts of liquid claims. Until November 2000, the calculation base consisted of average daily balances of household foreign exchange savings deposits with a remaining maturity of up to 3 months, while starting from December 2000 the base consists of foreign exchange sources of funds, including: ordinary foreign exchange accounts, special foreign exchange accounts, sight foreign exchange accounts and savings deposits, received foreign exchange deposits and received foreign exchange loans, as well as obligations arising from securities issued in foreign exchange (excluding the bank's equity securities). Starting from November 2001, the base includes also hybrid and subordinated instruments.

Column 7 shows the total amount of other obligatory deposits with the CNB, including CNB bills on an obligatory basis, those CNB bills on a voluntary basis used by banks to maintain the prescribed minimal liquidity (LAR), special statutory reserves until July 1995, special reserve requirement on liabilities arising from issued securities from March 2006, statutory reserves on f/c deposits, f/c credits from foreign banks and guarantees for such credits and marginal reserve requirement (from August 2004).

Column 8 shows the portion of the kuna reserve requirement which banks deposit in a statutory reserve account with the CNB (until December 1994 this amount corresponded with the statutory reserve instrument, while since January 1995 a minimum percentage of the total reserve requirement banks are required to deposit in a special statutory reserve account with the CNB has been prescribed). In April 2005, this percentage was set at 70%.

Column 9 shows the portion of the foreign currency reserve requirement which banks deposit in the CNB's foreign exchange accounts. The percentage for allocating the foreign currency component of reserve requirements calculated on the basis of foreign exchange funds of non-residents and foreign exchange funds received from legal persons in a special relationship with a bank amounts to

	December	672.5	20,493.4	0.96	0.2	0.0	0.0	4,163.3
2006	January	579.6	18,833.0	0.80	0.1	0.0	0.0	5,954.5
	February	465.0	16,852.9	0.63	0.0	0.0	0.0	6,439.9
	March	375.8	13,813.2	0.51	0.0	0.0	0.0	6,927.0
	April	394.7	13,090.1	0.52	0.1	0.0	0.0	5,864.8
	May	423.1	12,282.9	0.53	0.0	0.0	0.0	5,417.2
	June	496.4	13,253.2	0.59	0.0	0.0	0.0	6,206.9
	July	496.9	12,721.5	0.57	0.0	0.0	0.0	5,560.5

100%, while the percentage for allocating the remaining portion of the foreign currency component of reserve requirements amounts to 60%.

Column 10 shows the weighted average remuneration rate on all forms of immobilized kuna funds which include reserve requirements and other obligatory deposits with the CNB.

Column 11 shows the weighted average remuneration rate on allocated funds in foreign currency, including the marginal reserve requirement funds (from August 2004 on). From June 2005 the CNB pays remuneration equalling 50% of the US Federal Funds Target Rate for the funds allocated in US dollars and 50% of the ECB Minimum Bid Refinance Rate for the funds allocated in euros. In both cases the rate in effect on the day of allocation is applied.

**Table F4: Banks' Liquidity Indicators**

The table reports monthly averages of day-to-day balances of some indicators of banks' liquidity. Savings banks are included beginning in July 1999.

Column 3 shows free reserves in kuna, defined as bank's total reserves (in settlement accounts and in vaults) decreased by the minimal average settlement account and vault balance, as prescribed by instruments of the CNB.

Column 4 shows free reserves in foreign currency, defined as

funds for the maintenance of foreign currency reserve requirements (foreign currency cash and checks in foreign exchange, liquid foreign exchange claims maintained in the accounts with the high-grade foreign banks and foreign currency CNB bills) decreased by the minimal required balance of these funds in the same period.

Column 5 shows the primary liquidity ratio as a percentage of monthly day-to-day kuna free reserves averages (column 3) in monthly day-to-day averages of deposits which constitute the reserve base.

Column 6 shows the monthly average of day-to-day balances of secondary liquidity sources used. Secondary liquidity sources comprise: Lombard credits (since December 1994), short-term liquidity credits (since February 1999), and overdue liabilities to the CNB.

Column 7 reports the monthly average of day-to-day balances of kuna CNB bills on a voluntary basis (until December 1994, this amount is decreased by the portion of voluntarily registered CNB bills used by banks to maintain the prescribed minimal liquidity).

Column 8 reports the monthly average of day-to-day balances of foreign currency CNB bills on a voluntary basis (EUR and USD).

Column 9 reports the monthly average of day-to-day balances of kuna MoF treasury bills. Until September 2002, it shows the discounted value of treasury bills, while starting from October 2002, it shows their nominal value.

	July	1.51	3.41	9.98	10.25	7.08	12.47	13.60	4.18	8.43	5.96	9.98	
Relative significance <sup>a</sup>		–	–	68.35	57.99	23.84	34.15	30.05	4.10	10.37	3.98	6.38	

<sup>a</sup> Relative significance is calculated as a percentage of corresponding credit category in total credits disbursed in the reporting month (according to data for the last period included in the table).

Note: A break in the time series occurred due to changes in the methodology used in interest rate statistics as of 1 January 2001. This especially refers to interest rates shown in columns 5, 6 and 7. Interbank credits, which bear relatively low interest rates, were, among others, excluded from short-term credits to enterprises. The increase in interest rates was also caused by the weighting method: all categories are weighted by the amounts of newly-granted credits, except credit lines whose relative share grew in the new coverage, which are weighted by book balances.

**Table G1: Banks' Interest Rates on Kuna Credits Not Indexed to Foreign Currency**

The table contains weighted averages of banks' and savings banks' monthly interest rates on kuna credits not indexed to f/c, reported on a yearly basis.

Up to December 2001, data refer to weighted averages of banks' monthly interest rates on kuna credits not indexed to f/c granted to legal persons (which included enterprises, the public sector, financial institutions, non-profit institutions and non-residents) and households, reported on a yearly basis. Savings banks are not covered.

Starting from January 2002, data refer to weighted averages of banks' and savings banks' monthly interest rates on kuna credits not indexed to f/c granted only to enterprises (public and other) and households, reported on a yearly basis.

Up to February 1996, columns 3 and 4 showed interest rates on the interbank money market, according to information published by the Zagreb Money Market (ZMM). Starting from March 1996, interest rates on the money market are calculated as weighted monthly averages of weighted daily interest rates and shown separately for trad-

ing in overnight credits and trading in other credits on the ZMM. In the period between May 1998 and January 2001, the repayment of credits granted on the interbank overnight market was guaranteed by banks' required reserves with the CNB. Columns 5 through 13 show weighted averages of banks' and savings banks' monthly interest rates classified by maturity and sectors. Interest rates on short-term credits to enterprises also include interest rates on callable loans.

Data on banks' and savings banks' interest rates on kuna credits not indexed to f/c are based on banks' and savings banks' periodic reports. The basis for calculation of weighted averages are amounts of credits bearing corresponding interest rates, which were disbursed during the reporting month, with the exception of interest rates on giro and current account credit lines, for which weighted averages were calculated based on the balance of these loans at the end of the reporting month.

Relative significance of particular interest rates (reported in the last line of the table) refers to data for the last period included in the table. It is calculated as a percentage of the corresponding credit category (to which exchange rates apply) in total credits included in the calculation of weighted averages for that period.

**Table G2: Banks' Interest Rates on Kuna Credits Indexed to Foreign Currency and on Credits in Euros**

weighted averages of monthly interest rates, in % on annual basis

<sup>a</sup> Relative significance is calculated as a percentage of corresponding credit category in total credits disbursed in the reporting month (according to data for the last period included in the table).

**Table G2: Banks' Interest Rates on Kuna Credits Indexed to Foreign Currency and on Credits in Euros**

The table contains weighted averages of banks' and savings banks' monthly interest rates on kuna credits indexed to f/c and on credits in euros, reported on a yearly basis.

Up to December 2001, data refer to weighted averages of banks' monthly interest rates on kuna credits indexed to f/c and on credits in euros (or German marks) granted to legal persons (which included enterprises, the public sector, financial institutions, non-profit institutions and non-residents) and households, reported on a yearly basis. Savings banks are not covered.

Starting from January 2002, data refer to weighted averages of banks' and savings banks' monthly interest rates on kuna credits indexed to f/c and on credits in euros granted only to enterprises (public and other) and households, reported on a yearly basis.

Data on banks' and savings banks' interest rates on kuna credits indexed to f/c and on credits in euros are based on banks' and savings

banks' periodic reports. The basis for calculation of weighted averages are amounts of credits bearing corresponding interest rates, which were disbursed during the reporting month.

Columns 3 through 11 show weighted averages of banks' and savings banks' monthly interest rates classified by maturity and sectors. Interest rates on short-term credits to enterprises also include interest rates on callable loans.

Up to December 2001, interest rates on credits in euros (columns 12, 13 and 14) refer to credits released in German marks in the reporting month, and starting from January 2002, they refer to credits released in euros, while weighted averages are calculated based on their kuna equivalent using current exchange rate. Credits released in other currencies are not included in this table.

Relative significance of particular interest rates (reported in the last line of the table) refers to data for the last period included in the table. It is calculated as a percentage of the corresponding credit category (to which exchange rates apply) in total credits included in the calculation of weighted averages for that period.

**Table G3: Banks' Interest Rates on Kuna Deposits Not Indexed to Foreign Currency**

weighted averages of monthly interest rates, in % on annual basis

	July	1.70	0.57	3.16	3.12	3.96	2.82	4.46	4.91	3.00
Relative significance <sup>a</sup>		50.76	36.23	10.75	10.44	2.79	7.65	0.31	0.24	0.07

<sup>a</sup> Relative significance is calculated as a percentage of corresponding deposit category in total deposits received in the reporting month (according to data for the last period included in the table).

**Table G3: Banks' Interest Rates on Kuna Deposits Not Indexed to Foreign Currency**

The table contains weighted averages of banks' and savings banks' monthly interest rates on kuna deposits not indexed to f/c, reported on a yearly basis.

Up to December 2001, data refer to weighted averages of banks' monthly interest rates on kuna deposits not indexed to f/c received from legal persons (which included enterprises, the public sector, financial institutions, non-profit institutions and non-residents) and households, reported on a yearly basis. Savings banks are not covered.

Starting from January 2002, data refer to weighted averages of banks' and savings banks' monthly interest rates on kuna deposits not indexed to f/c received from enterprises (public and other) and households, reported on a yearly basis.

Data on banks' and savings banks' interest rates on kuna deposits not indexed to f/c are based on banks' and savings banks' periodic reports.

Column 3 reports weighted averages of monthly interest rates on total kuna deposits (giro and current accounts, household savings deposits and time deposits) not indexed to f/c. Column 4 shows

weighted averages of monthly interest rates on deposits in giro and current accounts not indexed to f/c received from enterprises (until December 2001, all legal persons) and households, and column 5 shows weighted averages of monthly interest rates on total time deposits not indexed to f/c.

The basis for calculation of weighted averages for kuna time deposits not indexed to f/c are the amounts of those deposits received during the reporting month. The basis for calculation of weighted averages for deposits in giro and current accounts are the end-of-month book balances of those deposits. Weighted averages of interest rates on total kuna deposits not indexed to f/c (column 3) are weighted by the end-of-month balances of all categories included in the calculation.

Kuna and foreign currency deposits used as collateral for credit are included, while restricted deposits (deposits used for payment of imports and other restricted deposits) are not included into the calculation of weighted averages.

Relative significance of particular interest rates (reported in the last line of the table) refers to data for the last period included in the table. It is calculated as a percentage of the corresponding deposit category (to which exchange rates apply) in total deposits included in the calculation of weighted averages for that period.

**Table G4a: Banks' Interest Rates on Kuna Deposits Indexed to Foreign Currency and on Foreign Currency Deposits**

weighted averages of monthly interest rates, in % on annual basis

Year	Month	Interest rates on savings and time deposits indexed to f/c				Interest rates on foreign currency deposits					
		Total average	On short-term deposits	On long-term deposits	Total average	Savings deposits

	March	4.14	3.60	4.61	2.67	0.26	0.25	0.17	0.31	0.50	
	April	3.93	3.72	4.67	2.69	0.26	0.25	0.17	0.32	0.63	
	May	4.05	3.70	4.61	2.60	0.26	0.24	0.17	0.31	0.76	
	June	4.43	3.96	4.77	2.72	0.25	0.24	0.17	0.30	0.72	
	July	4.08 <sup>b</sup>	3.80	4.69	2.72	0.26	0.24	0.17	0.31	0.76	
Relative significance <sup>a</sup>		5.00	3.97	1.01	44.24	27.51	18.83	2.82	5.16	0.70	

<sup>a</sup> Relative significance is calculated as a percentage of corresponding deposit category in total deposits received in the reporting month (according to data for the last period included in the table).

<sup>b</sup> Of the total amount of deposits to which this interest rate refers, 30.09 percent refers to enterprises.

**Table G4a and b: Banks' Interest Rates on Kuna Deposits Indexed to Foreign Currency and on Foreign Currency Deposits**

The table contains weighted averages of banks' and savings banks' monthly interest rates on kuna deposits indexed to f/c and on foreign currency deposits, reported on a yearly basis.

Up to December 2001, data refer to weighted averages of banks' monthly interest rates on kuna deposits indexed to f/c and on foreign currency deposits received from legal persons (which included enterprises, the public sector, financial institutions, non-profit institutions and non-residents) and households, reported on a yearly basis. Savings banks are not covered.

Starting from January 2002, data refer to weighted averages of banks' and savings banks' monthly interest rates on kuna deposits indexed to f/c and on foreign currency deposits received from enterprises (public and other) and households, reported on a yearly basis.

Data on banks' and savings banks' interest rates on kuna deposits indexed to f/c and on foreign currency deposits are based on banks' and savings banks' periodic reports.

Column 3 reports weighted averages of monthly interest rates on total kuna savings and time deposits indexed to f/c received from enterprises (until December 2001, all legal persons) and households, whereas weighted averages of monthly interest rates on time deposits are shown in columns 4 (short-term deposits) and 5 (long-term deposits) respectively.

Up to December 2001, interest rates on foreign currency deposits refer to deposits received in German marks or US dollars, and start-

ing from January 2002, they refer to deposits received in euros and US dollars, while weighted averages are calculated based on their kuna equivalent using current exchange rate. Deposits received in other currencies are not included in this table.

The basis for calculation of weighted averages for kuna time deposits indexed to f/c and foreign currency time deposits are the amounts of those deposits received during the reporting month. The basis for calculation of weighted averages for savings deposits indexed to f/c are the end-of-month book balances of those deposits. Starting from January 2002, weighted averages of interest rates on total kuna deposits indexed to f/c (column 3) are weighted by the end-of-month balances of all categories included in the calculation.

The average interest rate on total foreign currency deposits (column 6) refers to the weighted average of monthly interest rates on savings and time deposits, which are weighted by the end-of-month balances of all categories included in the calculation.

The basis for calculation of weighted averages of monthly interest rates on total foreign currency savings deposits (column 7) are the end-of-month balances of those deposits.

The basis for calculation of weighted averages of monthly interest rates on total foreign currency time deposits (column 12) are the amounts of those deposits received during the reporting month. The same basis is applied in calculating weighted averages of monthly interest rates on total short-term foreign currency deposits (column 13) and on total long-term foreign currency deposits (column 18).

Relative significance of particular interest rates (reported in the

<sup>a</sup> Preliminary data. <sup>b</sup> Revised data.

Note: In the period from January 1994 to September 2001 all foreign exchange sale and purchase transactions in banks' reports delivered to the CNB were recorded based on realised sale/purchase transaction regardless of the contracted term for realisation and were as such transferred into the Table on Banks' Trade with Foreign Exchange. As of the of change in the reporting scope dated 1 October 2001 reports contain data on contracted sale and purchase of foreign exchange broken down by spot, forward and swap transactions. Based on the aforesaid the data for 2002, 2003 and 2004 have been revised so as to include only the data on contracted spot transactions with banks no longer included into the "legal persons" category.

**Table G5: Banks' Trade with Foreign Exchange**

Data on trade with foreign exchange between banks comprise spot transactions of the purchase and sale of foreign exchange in domestic foreign currency market. Spot transactions are contracted obligations to buy/sell foreign currency within maximally 48 hours. The

transactions are classified by category of participants (legal and natural persons, domestic and foreign banks and the CNB). Sources of data are banks' reports on trading with foreign exchange and statistical data on foreign payment operations.

Other Croatian National Bank transactions include foreign exchange sales and purchases on behalf of the Ministry of Finance.

**Table H1-H6: Balance of Payments**

The balance of payments of the Republic of Croatia represents a systematic overview of the value of economic transactions performed by the Croatian residents with foreign countries within a particular period. It is compiled in accordance with the recommendations of the International Monetary Fund (Balance of Payments Manual, Fifth Edition, 1993). Data sources include: 1. reports of the government institutions (Central Bureau of Statistics and Croatian Institute for Health Insurance), 2. special reports of the Croatian National Bank (International Transaction Reporting System (ITRS), external debt relations, monetary statistics and reserve assets) and 3. estimates and statistical research carried out by the Croatian National Bank.

Balance of payments of the Republic of Croatia data are reported in three currencies: in euros (EUR), US dollars (USD) and domestic currency (HRK). In all cases, the same data sources are used and the same principles regarding the scope of transactions and the procedures for compiling particular items are applied. Since the original data are reported in different currencies, the transaction values are converted from the original currency into the reporting currency by applying the exchange rate from the CNB exchange rate list in one of the following manners:

- by applying the midpoint exchange rate on the date of the transaction;
- by applying the average monthly or quarterly midpoint exchange rate in the case the transaction date is not available;

- by applying the end-of-period exchange rate for the calculation of a change in the transaction value between the two periods; the end-of-period balances reported in the original currency serve as a basis for calculating the change in the original currency value, which is converted, by applying the average midpoint exchange rate in the observed period, into the value of change in the reporting currency.

The Report of the Central Bureau of Statistics on merchandise foreign trade of the Republic of Croatia represents the basic data source for the balance of payments items related to exports and imports. These data are adjusted, in accordance with the recommended compilation method, for coverage and classification. Accordingly, goods exports and imports in the balance of payments are reported at f.o.b. parity. The value of exports at this parity is already contained in the previously mentioned CBS Report, whereas the value of imports f.o.b. is estimated on the basis of research studies of the CNB on the stratified sample of importers. The resulting value serves as a basis for the estimate of the share of transportation and insurance services by which the original value of imports c.i.f., stated in the CBS Report, is reduced. In the 1993-2001 period, this share stood at 7.10% (estimated only on the basis of the largest and large exporters), while from 2002 on it has amounted to 3.73%. In the period from 1993 to 1996, the value of imports was modified by estimates of imports in duty free zones, which have been included in the merchandise trade statistics since 1997. Starting from 1996, goods exports and imports have been modified by the data on repairs on goods and goods procured in

<sup>a</sup> Preliminary data.

ports by carriers. In addition, since 1999, based on the Survey on Consumption of Foreign Travellers in Croatia and Domestic Travellers Abroad, the item of goods exports has been modified by the estimated value of goods sold to foreign travellers and tourists and taken out of the Republic of Croatia. The item of goods imports is adjusted for the estimated value of goods imported personally by the Croatian citizens from the neighbouring countries (shopping expenditures).

Transportation, travel and other services are reported separately under service account. Income and expenditures on the basis of transportation, in the 1993-1998 period, were adopted from the ITRS. Starting from 1999, income and expenditures arising from transportation of goods and passengers, as well as the value of accompanying services, which together constitute the total value of these services, have been compiled on the basis of the results of the Research on transactions related to international transportation services, carried out by the CNB. Owing to an exceptionally large population of road carriers, income and expenditures on the basis of road transportation are not adopted from this research. They are compiled by using ITRS data. As regards transportation of goods, expenditures are supplemented by a portion of transportation and insurance costs related to imports of goods which belongs to non-residents and which is estimated by adjusting the value of imports at c.i.f. parity to the value of imports f.o.b.

Income from services rendered to foreign travellers and tourists, as well as expenditures incurred by domestic travellers and tourists abroad are shown under the position Travel. In the 1993-1998 period, this position was assessed by using various data sources which did not provide for a full coverage in accordance with the recommended methodology. Accordingly, in the second half of 1998, the Croatian National Bank started to carry out the Survey on Consumption of Foreign Travellers in Croatia and Domestic Travellers Abroad and use its results for compiling the Travel position. Since early 1999, the results of this Survey, based on carrying out a survey of travellers (stratified sample) at border crossings, have been combined with the Ministry of the Interior data on total number of foreign and domestic travellers, along with the data on distribution of foreign travellers by

countries contained in the CBS Report on tourism, in order to assess the corresponding balance of payment items.

Other services position is compiled by using different data sources: apart from income and expenditures related to insurance and communication services, which have been determined by the CNB special statistical research since 2001, the values of all other services are adopted from the ITRS.

Transactions in the income account are classified into four main groups. Compensation of employees item is compiled on the basis of the ITRS. Income from direct investment, portfolio investment and other investment are reported separately. Data on reinvested earnings are reported separately, under direct investment income, calculated on the basis of the CNB Research on direct and other equity investment. In contrast to data on dividends, these data are not available for the 1993-1996 period, since at that time they were not reported separately. On the basis of statistical data on external debt relations, starting from 1997, income from direct investment includes data on interest arising from credit relations between residents and non-residents directly related through ownership. Income from equity portfolio investment is compiled on the basis of the same research, whereas data on debt portfolio investment income have been compiled since 1999, based on income reported in statistics on foreign credit relations, which also encompass payments related to debt securities owned by non-residents. Income from other investments includes all payments and collections of interest in accordance with the foreign credit relations statistics.

Current transfers are reported separately for the general government sector and other sectors. The ITRS is used as the main data source on current transfers for both sectors. In addition to taxes and excise duties, pensions, monetary support and donations, which are included in current transfers of both sectors, the government sector also encompasses data on multilateral co-operation, whereas other sectors include data on workers' remittances. Current transfers of the general government sector also include data on exports and imports of goods without a payment obligation, provided by the CBS. In the 1993-1998 period, current transfers of other sectors also encom-

<sup>a</sup> Preliminary data.

passed an estimate of unregistered foreign currency remittances, which accounted for 15% of the positive difference between unclassified inflows and outflows of the household sector. From 1993 to the second quarter of 1996, the CNB also assessed a portion of the outflow based on current transfers. Since 2002, inflows and outflows based on current transfers of other sectors are supplemented by the data of the CNB special statistical research on international transactions related to insurance services.

Capital account is compiled on the basis of the ITRS, particularly on their part related to transfers of migrants. In addition, capital account includes transfers that cannot be classified into current transfers, such as allocation of gold of the former SFRY or investments in patents and rights.

Foreign direct investments include equity capital, reinvested earnings and debt relations between ownership-related residents and non-residents. Direct investments are investments whereby a foreign owner acquires a minimum of 10% interest in equity capital of a company, regardless of whether a resident invests abroad or a non-resident invests in Croatian residents. The CNB Research on foreign direct investments started in 1997 when companies included in the survey also delivered data on direct investments for the 1993-1996 period. For the same period, no data are available on reinvested earnings and other capital under direct investment position, where all debt relations between related residents and non-residents are classified (excluding the banking sector). Such data actually became available only after the stated research has been launched. Since 1999 data on debt relations within direct investments have been collected on the basis of external debt relations statistics.

Data on equity portfolio investments are collected from the same data source as the data on direct investments. Debt portfolio investments include all investments in short-term and long-term debt securities that cannot be classified under direct investments. In the 1997-1998 period, these data were collected through the CNB Research on direct and portfolio investments, and since 1999 data on external debt relations and monetary statistics data for bank investment have been used. Starting from 2002 and 2004, this position has

also been compiled for investment funds and pension funds, respectively.

Other investment encompasses all other debt investments that have not been mentioned, apart from investment constituting reserve assets. Other investments are classified by instruments, maturity and sectors. Trade credits, in the 1996–2002 period, included the CNB estimates of advance payment and deferred payments, made on the basis of the sample of the largest and large importers and exporters. Data on advance payments have been estimated since 1996, while data on short-term deferred payments (first up to 90 days, then up to 150 days, and today from 8 days to 1 year) have been collected since 1999. In 2003 this research was replaced by a new one, where the selected companies, regardless of their size (stratified sample), are obliged to submit data. Data on deferred payments with the original maturity of more than one year are adopted from the CNB foreign credit relations statistics. Credits granted by residents to non-residents, i.e. foreign loans utilised by residents and granted by non-residents, which cannot be classified into direct investments or trade credits, are classified by the institutional sector and maturity under the corresponding positions of other investment. The CNB foreign credit relations statistics represent the data source for these positions. Currency and deposit position shows residents' claims on foreign countries for foreign cash and deposits with foreign banks, as well as obligations of the Croatian banks for deposits owned by non-residents. Monetary statistics represent a data source for the general government sector and banks sector. Data on balance and currency structure of foreign assets and liabilities, contained in monetary statistics, are used to assess transactions from which the exchange rate effect was eliminated. In the 1993-1998 period, data on other sectors' claims under this position were compiled on the basis of the CNB estimate of a portion of net foreign currency inflows of the household sector which is not classified under current transfers. Since 1999 this position has included only the data based on the Bank for International Settlement quarterly data, while data in the fourth quarter of 2001 and in the first two quarters of 2002 relate to the effect of the EMU countries' currencies changeover to the euro.

<sup>a</sup> Preliminary data.

In the period from 1993 to 1998, the estimate of reserve assets transactions was made by converting the changes in the original currencies into the US dollars by applying the average monthly exchange

rate of the currencies contained in the reserves. Since 1999 the changes in reserve assets balance have been calculated on the basis of the CNB accounting data.

<sup>a</sup> Preliminary data.

**Table H7: International Reserves and Banks' Foreign Exchange Reserves**

The international reserves of the Croatian National Bank are shown according to the methodology contained in the Balance of Payments Manual (International Monetary Fund, 1993), and include those foreign claims of the Croatian National Bank that can be used to bridge imbalances in international payments. International reserves

include special drawing rights, reserve position in the International Monetary Fund, gold, foreign currency and deposits with foreign banks, as well as bonds and debt instruments.

The foreign exchange reserves of banks include foreign currency and domestic banks' deposits with foreign banks. These foreign exchange reserves represent an additional source of liquidity for bridging imbalances in international payments.

**Table H8: International Reserves and Foreign Currency Liquidity**

International reserves and foreign currency liquidity are shown in accordance with a Template on international reserves and foreign currency liquidity, drawn up by the IMF. A detailed explanation of the Template is given in “International Reserves and Foreign Currency Liquidity – Guidelines for a Data Template, 2001”.

The first part of the Template shows total assets of the Croatian National Bank in convertible foreign currency. Official reserve assets (I.A.) show those types of assets that are readily available to the CNB at any moment for bridging imbalances in international payments. Official international reserves include: short-term foreign negotiable debt securities, foreign cash, foreign currency sight deposits, foreign currency time deposits which can be withdrawn before maturity, foreign currency time deposits with a remaining maturity of up to 1 year, reserve position with the IMF, special drawing rights, gold, and reverse repos with foreign negotiable debt securities.

The second part of the Template shows fixed predetermined foreign currency net liabilities of the Croatian National Bank and the central government (excluding central government funds) that fall due in the next 12 months. Foreign currency loans, securities and deposits (II.1.) include future interest payments on banks’ foreign currency reserve requirements with the CNB (only interest payments for the next month are included), payments of future maturities of foreign currency CNB bills, future principal and interest payments on loans from the IMF, and future principal and interest payments on the central government’s foreign currency debts (excluding central government funds). Aggregate short and long positions in forwards and futures in foreign currencies (II.2.) include future collections (+) or payments (-) arising from currency swaps between the CNB and domestic banks (temporary sale or purchase of foreign currency). Item Other (II.3.) includes future payments arising from repo agreements

with foreign negotiable debt securities.

The third part of the Template shows predetermined contingent foreign currency net liabilities of the Croatian National Bank and the central government (excluding central government funds), which fall due in the following 12 months. Contingent liabilities in foreign currency (III.1.) include future principal and interest payments on foreign loans guaranteed by the central government, and banks’ foreign currency reserve requirements. (The inclusion of reserve requirements in foreign currency is based on the assumption that there will be no changes in ratios or in the base of foreign currency reserve requirements, which comprises foreign exchange sources of funds, including ordinary foreign exchange accounts, special foreign exchange accounts, sight foreign exchange accounts and savings deposits, received foreign exchange deposits and received foreign exchange loans, as well as obligations arising from securities issued in foreign exchange (excluding the bank’s equity securities) and hybrid and subordinated instruments). Undrawn credit lines show potential inflows (+) or outflows (-) which would arise from drawdowns under these credits.

The fourth part of the Template lists memo items. Short-term, domestic currency debt indexed to foreign currency (IV.a) shows obligations arising from the Act on Converting Households’ Foreign Exchange Deposits into the Public Debt of the Republic of Croatia, which fall due in the next 12 months. Pledged assets (IV.c) show time deposits in foreign currency with a maturity over 3 months listed in item I.B. which are also a pledge. Repo transactions with securities show the value of collateral that is the subject of repo agreements and reverse repo transactions with securities as well as how these transactions are registered in the Template. Until December 2000, the currency structure of international and other foreign currency reserves showed the currency structure of the total foreign currency assets of the CNB (section I.). From January 2001, the currency structure refers to official reserve assets (section I.A.).

	August	88.24		

<sup>a</sup> Preliminary data.

Note: From 1 January 2001, the euro-zone related price series includes Greece as well.

**Table H11: Indices of the Effective Exchange Rate of the Kuna**

The index of the nominal effective exchange rate of the kuna is a weighted geometric average of the index of bilateral nominal exchange rates of the kuna against the euro, US dollar, Swiss franc, pound sterling and Slovenian tolar. The series of the indices of the effective exchange rate of the kuna, calculated in accordance with the modified CNB methodology for calculating the nominal and real effective kuna exchange rate (for the basic CNB methodology, see Bulletin No. 64, Box: 2, October 2001), were first published in the CNB Bulletin No. 94 (June 2004). The weights are determined based on the average share of a particular foreign currency in the structure of the current account – ITRS data between January 2000 and December 2003 (between July 1996 and January 2000 in the previous version of notes on methodology under Table H10). The new weights have been assigned to the euro (70.6%), US dollar (27.2%), Swiss franc (1.0%) and pound sterling (1.0%) and thus replaced the old weights: euro (66.2%), US dollar (30.7%), Swiss franc (1.6%) and pound sterling (1.2%). The weight assigned to the Slovenian tolar remained unchanged at 0.2%. The year 2001 is a base period for calcu-

lating the indices of the effective exchange rate of the kuna (1995 in the previous version of notes on methodology under Table H10). The index of the nominal effective exchange rate is an aggregate indicator of the average value of the domestic currency against a basket of currencies. An increase in the index of the nominal effective exchange rate of the kuna in a certain period indicates that the kuna has depreciated against the basket of currencies, and vice versa. The index of the real effective exchange rate is a weighted geometric average of the index of bilateral exchange rates of the kuna adjusted for the relevant relative price indices (the ratio of price indices in partner countries and domestic prices). Producer price and consumer price indices, and the total harmonized consumer price index for the eurozone countries are used as deflators. The time series for consumer prices in Croatia is constructed in the following manner: retail price indices are used until December 1997 inclusive, and consumer price indices are used as of January 1998. Data for the last two months are preliminary. The historical data may be corrected for the subsequent changes in the data published by the statistical offices of the countries whose prices are included in the calculation of the index of the real effective exchange rate of the kuna.

**Table H12: Gross External Debt by Domestic Sectors**

External debt is defined as the external debt liabilities of residents on the basis of debt securities issued in foreign markets (at face value), credits (repo agreements included) regardless of their contractual maturity, deposits of non-residents, and trade credits granted by non-residents with contractual maturity of more than 180 days (90 days up to 11 July 2001 and 150 days up to 31 December 2002).

External debt by domestic sectors is shown in the same manner as in the Capital and Financial Account of the BOP. Item Government shows external debt of the general government, which includes the Republic of Croatia, central government funds (including the Croatian Bank for Reconstruction and Development, the State Agency for Deposit Insurance and Bank Rehabilitation, the Croatian Roads and the Croatian Highways), and local government. Item Croatian National Bank shows the central bank debts. Item Banks shows debts of banks. Item Other sectors shows debts of other banking institu-

tions, non-banking financial institutions, enterprises, non-profit institutions and households, including craftsmen. Item Direct investment shows borrower – lender transactions of other sectors that are interrelated by ownership (borrower or lender owns more than 10 percent of the other).

Each sector data are further shown by contractual maturity (short-term and long-term) and by debt instrument. From the beginning of 2004, instruments included in item Currency and deposits (3. Banks) are reported in accordance with their maturity. Data for the previous periods are reported only on a long-term basis.

Outstanding gross external debt includes principal and interest arrears, as well as accrual interest and future principal payments.

Outstanding debt data are shown at the CNB's midpoint exchange rate at the end of the period.

Data are considered preliminary until after publication of the final BOP data for the reporting quarter.

**Table H13: Public Sector Gross External Debt, and Publicly Guaranteed and Non-Publicly Guaranteed Private Sector Gross External Debt**

The gross external debt position presented in this Table highlights the role of the public sector.

Public sector includes the general government (including the Republic of Croatia, central government funds and local government), the central bank, public enterprises and mixed ownership companies. Public enterprises are defined as enterprises in 100% ownership of business entities from the public sector. Mixed ownership companies

are defined as companies in which business entities from the public sector have a share larger than 50%.

Publicly guaranteed private sector gross external debt is defined as the external debt liabilities of business entities not covered by the definition of the public sector, the servicing of which is guaranteed by a business entity from the public sector.

Non-publicly guaranteed private sector gross external debt is defined as the external debt liabilities of business entities not covered by the definition of the public sector, the servicing of which is not guaranteed by the public sector.

Items are valued in the same manner as in Table H12.

**Table H14: Gross External Debt by Domestic Sectors and Projected Future Payments**

The Table shows outstanding gross external debt, projected principal payments and estimated interest payments according to the CNB's midpoint exchange rate at the end of the period.

Principal payments on Currency and deposits of non-residents are projected according to the available monetary statistics data on original and remaining maturity.

Estimated interest payments do not include interest on deposits from non-residents, repo transactions and hybrid and subordinated instruments, as well as late interest on these instruments. Future interest payments are estimated at the interest rates at the contracting time and do not reflect changes of variable interest rates.

Projected payments of accrual interest, which are an integral part of the gross external debt, increase the projected principal payments in the first quarter period and, consequently, decrease the interest payments estimated for the same period.

<sup>a</sup> Preliminary data.

**Table H15: International Investment Position – Summary**

This table is made in accordance with the recommendations of the IMF (Balance of Payments Manual, Fifth Edition, 1993). Data sources include: reports from banks, enterprises, the Croatian National Bank, and the Zagreb Stock Exchange.

Data on international investments of the Republic of Croatia and international investments into the Republic of Croatia are recorded in euros (EUR) and US dollars (USD). Depending on the sources of data available, the conversion of values from the original currencies into the reporting currencies is performed:

- by applying the current rate of exchange or the average monthly midpoint exchange rate of the Croatian National Bank to transactions;
- by applying the midpoint exchange rate of the Croatian National Bank on the reporting date to balances.

The source of data on foreign direct and portfolio equity investment is the statistical research of the Croatian National Bank. The equity investments have been monitored since the beginning of 2001 and are corrected for changes in the official index of the Zagreb Stock Exchange (CROBEX).

Portfolio debt investment and other investment are classified according to the following institutional sectors: the Croatian National Bank, government, banks and other sectors. The government sector comprises central government and funds and local government authorities. The banking sector comprises banks.

Item Portfolio debt investment – Assets and liabilities comprises data on investments of residents into debt securities issued by

non-residents (assets) and investments of non-residents into debt securities issued by residents (liabilities). The source of data is the register of foreign credit relations kept by the Croatian National Bank, which also comprises claims and liabilities arising from bonds and money market instruments.

Item Other investment – Trade credits – Assets and liabilities comprises foreign claims and foreign liabilities of the said sectors arising from trade credits. The source of data is the register of foreign credit relations kept by the Croatian National Bank.

Item Other investment – Loans – Assets and liabilities comprises data on loans granted and received between residents and non-residents classified according to institutional sectors. The source of data is the register of foreign credit relations kept by the Croatian National Bank.

Item Other investment – Currency and deposits – Assets shows the total liquid foreign exchange of banks authorized to do business abroad reduced by the amount of foreign exchange deposited by banks with the CNB in fulfilment of a part of their reserve requirements. In addition to banks' foreign claims, foreign claims of the government sector are also shown. The sources of data are reports from the government and banks.

Item Other investment – Currency and deposits – Liabilities shows the total foreign exchange and kuna liabilities of the said sectors abroad arising from current accounts, time and notice deposits, sight deposits and demand deposits. The sources of data for this item are reports from banks.

Item International reserves of the CNB is compiled on the basis of the CNB Accounting Department reports which contain data on their balances and changes.

<sup>a</sup> Irrespective of the note under the heading "Classification and presentation of data on claims and liabilities", the debt of the Croatian Roads, the Croatian Highways and the State Agency for Deposit Insurance and Bank Rehabilitation, presented in this table under headings 2. External debt of central government and 1. Domestic debt of central government, was reclassified from the sub-sector of the Republic of Croatia to the sub-sector central government funds in December 1998 and December 2002 respectively.

**Table I3: Central Government Debt**

Data on the central government debt are gathered from available data and are not reconciled with the Ministry of Finance of the Republic of Croatia. The central government debt consists of domestic and external debt. The sources of data on domestic debt of the central government are the following: the Ministry of Finance Monthly Sta-

tistical Review, Monetary Authorities Accounts and Banks' Accounts. The source of data on the central government external debt is the external debt statistics collected by the CNB. The supplement provides data on the central government guaranteed debt. Banks are the source of data on guarantees for domestic debt, while the external debt statistics collected by the CNB are the source of data on guarantees for external debt.

**Table J1: Consumer Price and Producer Price Indices**

The Central Bureau of Statistics (CBS) introduced the consumer price index (CPI) in early 2004. This indicator of price movements was compiled in accordance with the methodological principles laid down by the ILO and Eurostat. In its First Release, issued on 17 February 2004, the CBS published the data on movements in the CPI in January 2004 and the time series for the CPI as of January 2001. The CBS subsequently constructed the time series for the consumer price

index encompassing the period from January 1998 to December 2000. As expected following the introduction of the new index, the CBS has stopped publishing the retail price index (RPI) and the cost of living index whose calculation methodologies have not been adequately harmonised with internationally accepted standards. The main characteristic of the CPI are discussed in Box 1 in the CNB Bulletin No. 91 (2004). The data on the average year-on-year consumer price inflation rate are shown in the Bulletin table on Economic Indicators.

**Table J2: Core Consumer Price Indices**

The Central Bureau of Statistics calculates the core consumer price index in the manner that agricultural products prices and administrative prices (which among others include the prices of electricity and refined petroleum products) are excluded from the basket of

goods and services used in the calculation of the total consumer price index. A total of 111 goods and services are excluded and their share in the consumer price basket stood at 30.06% in 2005 (of which: agricultural products accounted for 6.93 percentage points, and administrative prices for 23.13 percentage points). The zero weighting method is used to exclude the prices of goods and services.

**Table J4: Consumer Confidence Index, Consumer Expectations Index and Consumer Sentiment Index**

The CNB Consumer Confidence Survey has been carried out regularly since April 1999 in accordance with the methodology of the European Commission, the Joint Harmonised EU Programme of Business and Consumer Surveys. Until April 2005 the CNB conducted the survey once a quarter (in January, April, July and October). As of May 2005 the CNB carries out the survey in monthly frequency in co-operation with the European Commission, using its technical and financial assistance. The Croatian National Bank bears sole responsibility for the creation and conduct of the survey.

The questionnaire contains 23 questions, examining consumer perception of the changes as regards every-day economic issues. The value of the response index is determined in line with the set methodology, based on the responses to the questions from the Consumer Confidence Survey. The movements of three composite indices, consumer confidence index (CCI), consumer sentiment index (CSI) and consumer expectations index (CEI), are calculated and monitored based on the value of the response indices. Each of the said composite indices is calculated as the arithmetic average of the response indices ( $I$ ), i.e. as the average of previously quantified responses to individual questions from the survey:

$$I_i = \sum_z^k r_i \cdot w_i$$

where:  $r$  is the value of the response,  $w$  is the share of respondents opting for a particular response (weight),  $i$  question from the ques-

tionnaire,  $z$  is the offered/chosen response,  $k$  is the number of offered responses to a particular question.

The value of the said indices ranges  $-100 < I_i < 100$ . Higher index values than those recorded over the previous period point to an increase in expectations (optimism) as regards the specific segment covered by the particular question.

The table shows the values of chosen response indices for the following questions:

I1: How has the financial situation of your household changed over the last 12 months?

I2: How do you expect the financial position of your household to change over the next 12 months?

I3: How do you think the general economic situation in Croatia has changed over the past 12 months?

I4: How do you expect the general economic situation in Croatia to develop over the next 12 months?
