Notification on the results of the review of the systemic importance of credit institutions in the Republic of Croatia

In its regular annual review, the Croatian National Bank confirmed the status of seven other systemically important credit institutions (hereinafter referred to as 'O-SIIs'). The O-SII status for six credit institutions was awarded automatically, based on their systemic importance score, with the materiality threshold of 275 points being the level above which a credit institution is automatically considered systemically important. One credit institution with a score below the stated materiality threshold (Addiko bank d.d.) was identified as an O-SII based on expert judgement. In accordance with the [internal procedures of the Croatian National Bank](#), expert judgement is supported by additional selected indicators of the systemic importance of a credit institution, that is, the amount of deposits covered by the deposit guarantee system and the number of deposit accounts held by natural and legal persons, reflecting the importance of the credit institution and its broad base of clients and indicating its high integration in the domestic economy and financial flows.

The prescribed capital buffer rates for O-SIIs for 2026 have been adjusted to take into account changes in the market position and to better link the buffers to the systemic importance of each O-SII. The set capital buffer rate has been increased for one O-SII, while the rate applicable to another O-SII in 2026 will be lower because of the regulatory limit linked to the rate for its parent credit institution (Table 1).
